

TOSHIBA CMOS Digital Integrated Circuit Silicon Monolithic

# TC9495F

## Digital Servo Single Chip Processor Built in 1 Bit DA Converter

The TC9495F is a single chip processor which incorporates the following function: synchronous separation protection and interpolation, EFM demodulation, Error correction, micro controller interface, digital equalizer for use in servo LSI and servo control circuit.

In addition, the TC9495F incorporates a 1 bit DA converter. In combination with the head amplifier TA2109F, TA2150FN, TA2153FN for digital servo, the TC9495F allow simplified, adjustment-free structuring of CD player system.

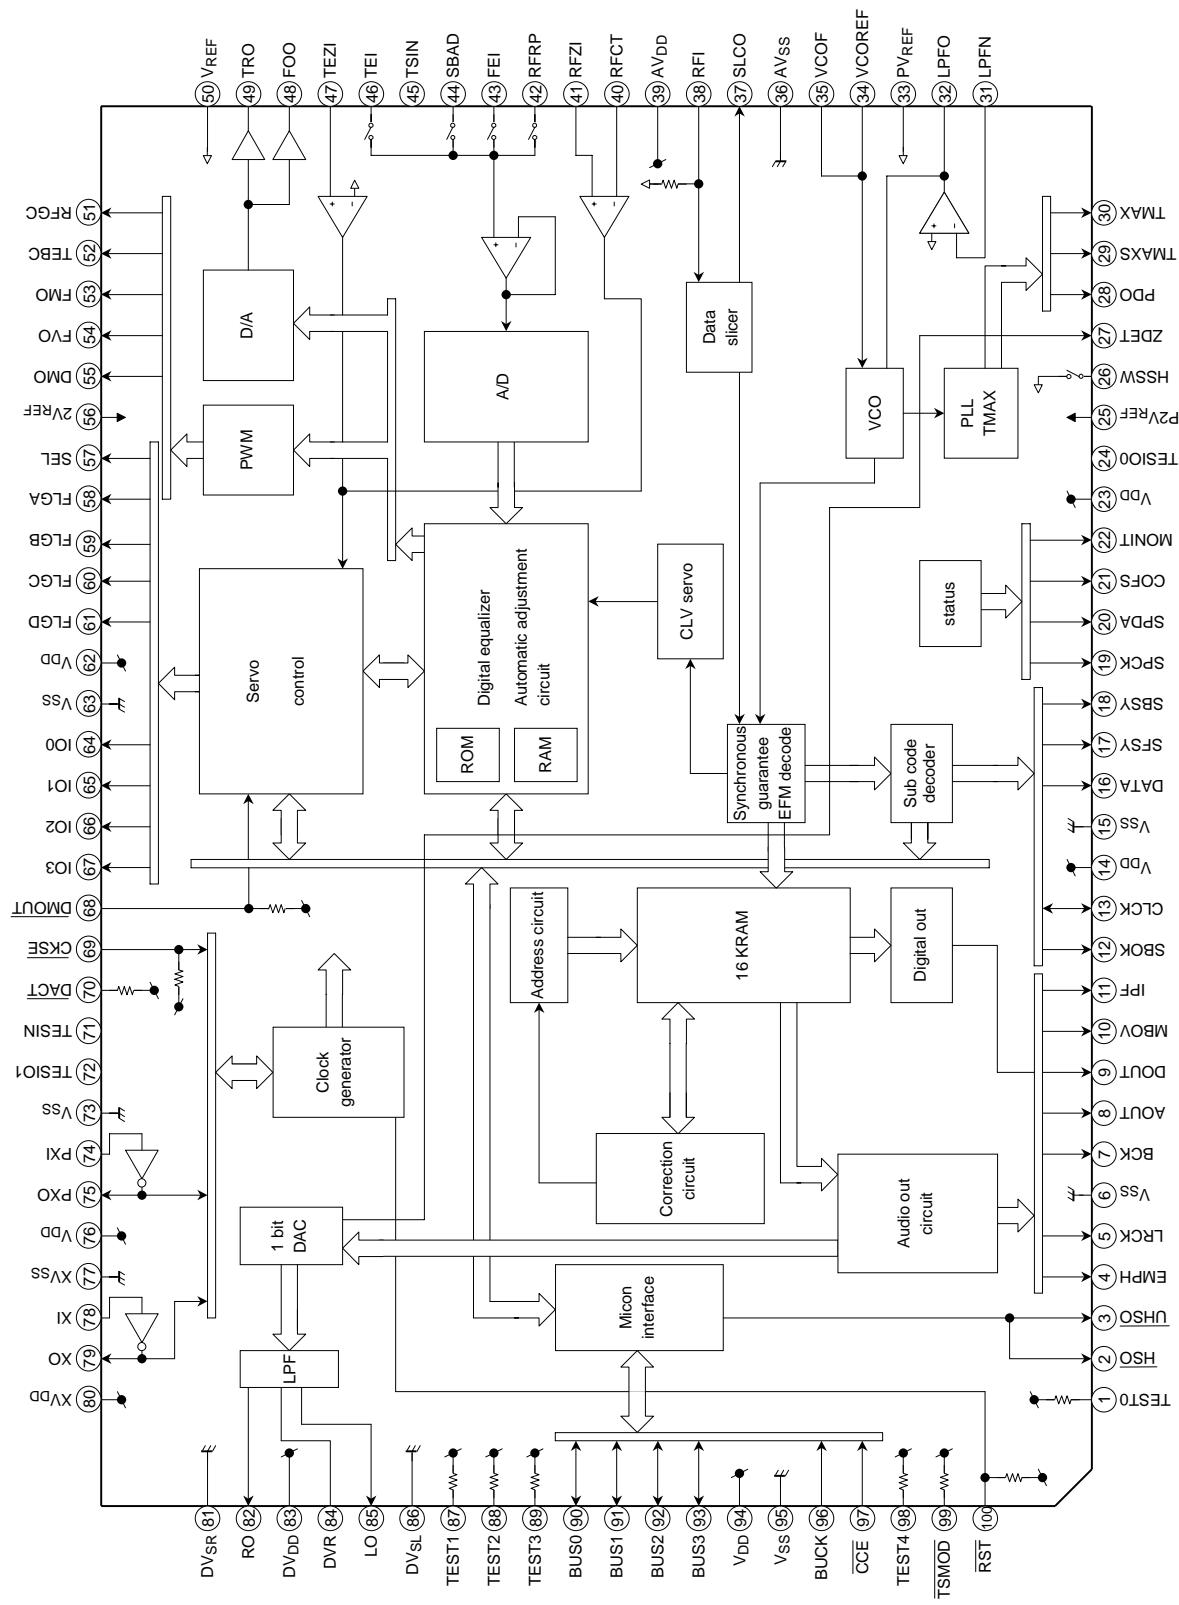

QFP100-P-1420-0.65A

Weight: 1.6 g (typ.)

### Features

- Capable of decode the text data.
- Sync pattern detection, sync signal protection and synchronization can be made correctly.
- Built in EFM demodulation circuit, subcode demodulation circuit.
- Capable of correcting dual C<sub>1</sub> correction and quadruple C<sub>2</sub> correction using the CIRC correction theoretical format.
- The TC9495F respond to variable playback system.
- Jitter absorbing capacity of  $\pm 6$  frames.
- Built in 16 KB RAM.
- Built in digital out circuit.
- Built in L/R independent digital attenuator.
- Audio output responds to bilingual function.
- Reed timing free subcode Q data and capable of synchronous output with audio data.
- Built in data slicer and analog PLL (free-adjustment VCO).
- Capable of automatic adjustment function of focus servo and tracking servo, for loop gain, offset and balance.
- Built in RF gain automatic adjustment circuit.
- Built in digital equalizer for phase compensation.
- Built in RAM for digital equalizer for coefficient, and capable of variable pickup.
- Built in focus, tracking servo control circuit.
- Search control corresponds to every mode and can realize high speed and stable search.
- Lens-kick and feed-kick are using speed controlled form.
- Built in AFC circuit and APC circuit for CLV servo of disc motor.
- Built in anti-defect and anti-shock circuit.
- Built in 8 times over sampling digital filter and 1 bit DA converter.
- Built in analog filter for 1 bit DA converter.
- Output format for audio out can be selected 32 fs, 48 fs, or 64 fs modes.
- Built in zero data detect output circuit.
- The TC9495F capable of 4 times speed operation.
- Built in micro controller interface circuit.
- CMOS silicon structure and high speed, low power consumption.
- 100 pin flat package.

## 8. PWM Converter Output (RFGC, TEBC, FMO, FVO, DMO)

Characteristics	Test Circuit	Test Condition	Min	Typ.	Max	Unit
PWM accuracy	—	—	—	8	—	bit
Sampling frequency	—	—	—	88.2	—	kHz
Output signal range	—	—	A <sub>VSS</sub>	—	2V <sub>REF</sub>	V

**DAC Characteristics**

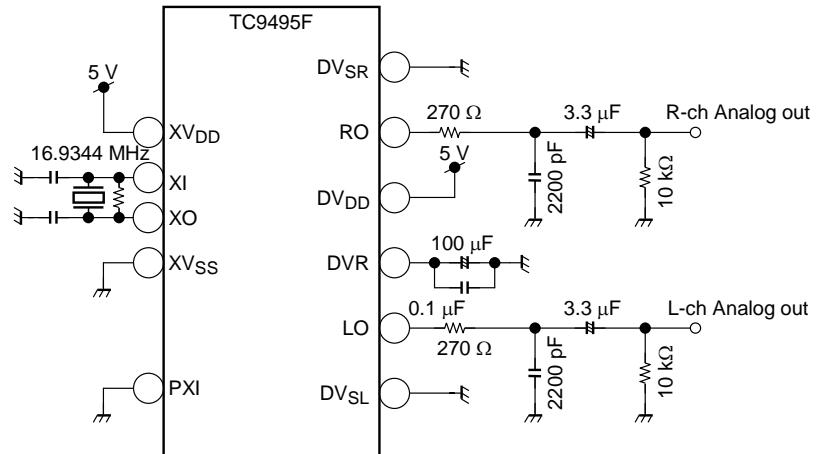

Characteristics	Symbol	Test Circuit	Test Condition	Min	Typ.	Max	Unit
Total harmonic distortion + noise	THD + N	1	1 kHz sine wave, full scale input, PXI = "L"	—	-85	-80	dB
S/N ratio	S/N	1	PXI = "L"	90	100	—	dB
Dynamic range	DR	1	1 kHz sine wave, -60dB input conversion	85	90	—	dB
Cross talk	CT	1	1 kHz sine wave, full scale input, PXI = "L"	—	-90	-85	dB
Analog output amplitude	DAC out	1	1 kHz sine wave, full scale input, PXI = "L"	1.12	1.20	1.28	V <sub>rms</sub>

**Test Circuit 1: Application Circuit is Used.**

LPF: SHIBASOKU 725C  
Distortion meter: SHIBASOKU 725C

Characteristics	Distortion Filter Setting: A-wait
THD + N, CT	OFF
S/N, DR	ON

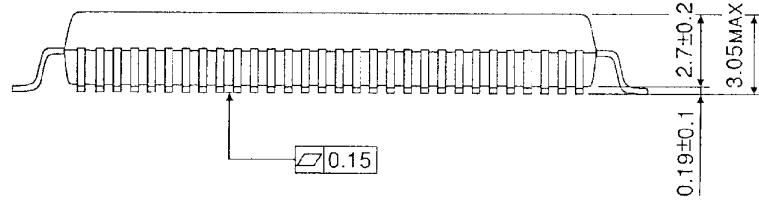

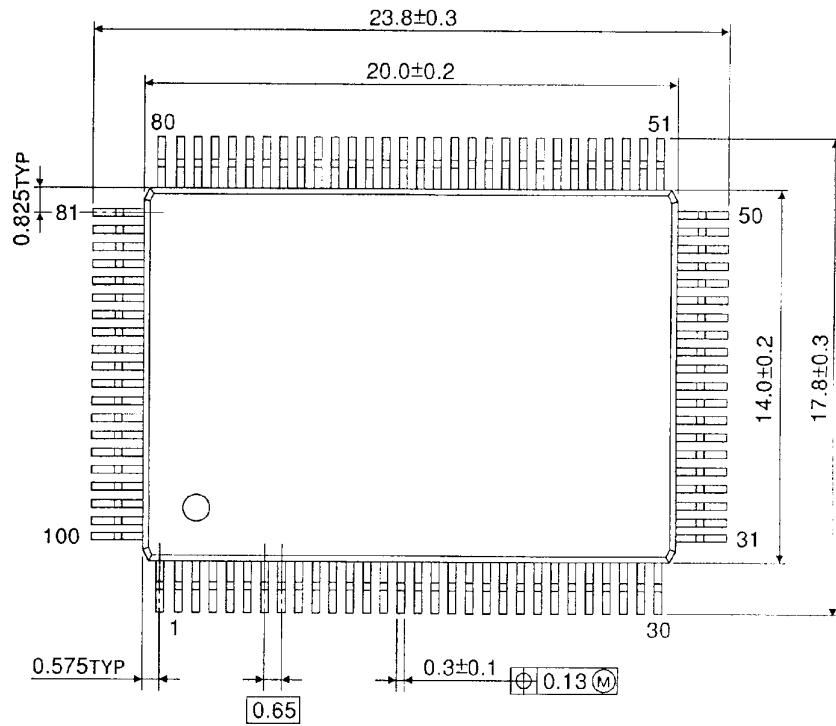

A-WAIT: IEC-A (corresponding)

**Application Circuit**

**Package Dimensions**

QFP100-P-1420-0.65A

Unit : mm

Weight: 1.6 g (typ.)

**RESTRICTIONS ON PRODUCT USE**

• TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.

In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..

- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
