MB90F342A(S), MB90F342CA(S), MB90F343A(S), MB90F343CA(S), MB90F345A(S), MB90F345CA(S), MB90F346A(S), MB90F346CA(S), MB90F347A(S), MB90F347CA(S), MB90F349A(S), MB90F349CA(S), MB90341A(S), MB90341CA(S), MB90342A(S), MB90342CA(S), MB90346A(S), MB90346CA(S), MB90347A(S), MB90347CA(S), MB90348A(S), MB90348CA(S), MB90349A(S), MB90349CA(S), MB90V340A-101/102

### ■ DESCRIPTION

The MB90340-series with up to 2 FULL-CAN\* interfaces and FLASH ROM is especially designed for automotive and other industrial applications. Its main features are the on-board CAN Interfaces, which conform to V2.0 Part A and Part B, while supporting a very flexible message buffer scheme and so offering more functions than a normal full CAN approach. With the new 0.35  $\mu\text{m}$  CMOS technology, Fujitsu now offers on-chip FLASH-ROM program memory up to 512 Kbytes.

The power supply (3 V) is supplied to the internal MCU core from an internal regulator circuit. This creates a major advantage in terms of EMI and power consumption.

The internal PLL clock frequency multiplier provides an internal 42 ns instruction cycle time from an external 4 MHz clock.

The unit features an 8 channel Output Compare Unit and 8 channel Input Capture Unit with 2 separate 16-bit free running timers. 4 UARTs constitute additional functionality for communication purposes.

\* : Controller Area Network (CAN) - License of Robert Bosch GmbH

Note : F<sup>2</sup>MC stands for FUJITSU Flexible Microcontroller, a registered trademark of FUJITSU LIMITED.

### ■ PACKAGES

100-pin Plastic QFP

(FPT-100P-M06)

100-pin Plastic LQFP

(FPT-100P-M05)

The Fujitsu logo, consisting of the word "FUJITSU" in a bold, sans-serif font with a stylized infinity symbol above the letter "I".

# MB90340 Series

## ■ FEATURES

### ● Clock

- Built-in PLL clock frequency multiplication circuit
- Selection of machine clocks (PLL clocks) is allowed among frequency division by two on oscillation clock, and multiplication of 1 to 6 times of oscillation clock (for 4 MHz oscillation clock, 4 MHz to 24 MHz).
- Operation by sub-clock (up to 50 kHz : 100 kHz oscillation clock divided two) is allowed. (devices without S-suffix only)
- Minimum execution time of instruction : 42 ns (when operating with 4-MHz oscillation clock, and 6-time multiplied PLL clock).
- Built-in Clock Modulation circuit

### ● 16 Mbyte CPU memory space

- 24-bit internal addressing

### ● Instruction system best suited to controller

- Wide choice of data types (bit, byte, word, and long word)
- Wide choice of addressing modes(23 types)
- Enhanced multiply-divide instructions and RETI instructions
- Enhanced high-precision computing with 32-bit accumulator

### ● Instruction system compatible with high-level language (C language) and multitask

- Employing system stack pointer
- Enhanced various pointer indirect instructions
- Barrel shift instructions

### ● Increased processing speed

- 4-byte instruction queue

### ● Powerful interrupt function

- Powerful 8-level, 34-condition interrupt feature
- Up to 16 external interrupts are supported

### ● Automatic data transfer function independent of CPU

- Expanded intelligent I/O service function (EI<sup>2</sup>OS) : up to 16 channels
- DMA : up to 16 channels

### ● Low power consumption (standby) mode

- Sleep mode (a mode that halts CPU operating clock)
- Main timer mode (time-base timer mode that is transferred from main clock mode)
- PLL timer mode (time-base timer mode that is transferred from PLL clock mode)
- Watch mode (a mode that operates sub clock and clock timer only)
- Stop mode (a mode that stops oscillation clock and sub clock)
- CPU blocking operation mode

### ● Process

- CMOS technology

### ● I/O port

- General-purpose input/output port (CMOS output)
  - 80 ports (devices without S-suffix)
  - 82 ports (devices with S-suffix)

(Continued)

(Continued)

- **Timer**

- Time-base timer, clock timer, watchdog timer : 1 channel
- 8/16-bit PPG timer : 8-bit X 16 channels, or 16-bit X 8 channels
- 16-bit reload timer : 4 channels
- 16-bit input/output timer
  - 16-bit free run timer : 2 channel (FRT0 : ICU 0/1/2/3, OCU 0/1/2/3, FRT1 : ICU 4/5/6/7, OCU 4/5/6/7)
  - 16-bit input capture: (ICU) : 8 channels
  - 16-bit output compare : (OCU) : 8 channels

- **Full-CAN interface : up to 2 channels**

- Compliant with Ver2.0A and Ver2.0B CAN specifications
- Flexible message buffering (mailbox and FIFO buffering can be mixed)
- CAN wake-up function

- **UART (LIN/SCI) : up to 4 channels**

- Equipped with full-duplex double buffer
- Clock-asynchronous or clock-synchronous serial transmission is available

- **I<sup>2</sup>C interface\* : up to 2 channels (devices with C-suffix only)**

- Up to 400 Kbits/s transfer rate

- **DTP/External interrupt : up to 16 channels, CAN wakeup : up to 2 channels**

- Module for activation of expanded intelligent I/O service (EI<sup>2</sup>OS), DMA, and generation of external interrupt.

- **Delay interrupt generator module**

- Generates interrupt request for task switching.

- **8/10-bit A/D converter : 16/24 channels**

- Resolution is selectable between 8-bit and 10-bit.
- Activation by external trigger input is allowed.
- Conversion time : 3  $\mu$ s (at 24-MHz machine clock, including sampling time)

- **Program patch function**

- Address matching detection for 6 address pointers.

- **Internal voltage regulator**

- Supports 3 V MCU core, offering low EMI and low power consumption figures

- **Programmable input levels**

- Automotive/CMOS-Schmitt (initial level is Automotive in Single chip mode)
- TTL level (initial level for External bus mode)

- **FLASH memory security function**

- Protects the content of FLASH memory (FLASH memory device only)

- **External bus interface**

- **Clock monitor function**

\* : I<sup>2</sup>C license :

Purchase of Fujitsu I<sup>2</sup>C components conveys a license under the Philips I<sup>2</sup>C Patent Rights to use, these components in an I<sup>2</sup>C system provided that the system conforms to the I<sup>2</sup>C Standard Specification as defined by Philips.

## ■ PIN DESCRIPTION

Pin No.		Pin name	Circuit type	Function
LQFP100*2	QFP100*1			
90	92	X1	A	Oscillation output
91	93	X0		Oscillation input
52	54	$\overline{\text{RST}}$	E	Reset input
75 to 82	77 to 84	P00 to P07	G	General purpose I/O. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
		AD00 to AD07		I/O pins for 8 lower bits of the external address/data bus. This function is enabled when the external bus is enabled.
		INT8 to INT15		External interrupt request input pins for INT8 to INT15.
83	85	P10	G	General purpose I/O. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
		AD08		I/O pin for the external address/data bus. This function is enabled when the external bus is enabled.
		TIN1		Event input pin for the reload timer 1
84	86	P11	G	General purpose I/O. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
		AD09		I/O pin for the external address/data bus. This function is enabled when the external bus is enabled.
		TOT1		Output pin for the reload timer 1
85	87	P12	N	General purpose I/O. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
		AD10		I/O pin for the external address/data bus. This function is enabled when the external bus is enabled.
		SIN3		Serial data input pin for UART3
		INT11R		External interrupt request input pin for INT11
86	88	P13	G	General purpose I/O. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
		AD11		I/O pin for the external address/data bus. This function is enabled when the external bus is enabled.
		SOT3		Serial data output pin for UART3
87	89	P14	G	General purpose I/O. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
		AD12		I/O pin for the external address/data bus. This function is enabled when the external bus is enabled.
		SCK3		Clock I/O pin for UART3

(Continued)

# MB90340 Series

Pin No.		Pin name	Circuit type	Function
LQFP100*2	QFP100*1			
92	94	P15	G	General purpose I/O. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
		AD13		I/O pin for the external address/data bus. This function is enabled when the external bus is enabled.
		SIN4		Serial data input pin for UART4 (EVA devices)
93	95	P16	G	General purpose I/O. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
		AD14		I/O pin for the external address/data bus. This function is enabled when the external bus is enabled.
		SOT4		Serial data output pin for UART4 (EVA devices)
94	96	P17	G	General purpose I/O. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
		AD15		I/O pin for the external address/data bus. This function is enabled when the external bus is enabled.
		SCK4		Clock I/O pin for UART4 (EVA devices only)
95 to 98	97 to 100	P20 to P23	G	General purpose I/O. The register can be set to select whether to use a pull-up resistor. In external bus mode, the pin is enabled as a general-purpose I/O port when the corresponding bit in the external address output control register (HACR) is 1.
		A16 to A19		Output pins for A16 to A19 of the external address bus. When the corresponding bit in the external address output control register (HACR) is 0, the pins are enabled as high address output pins (A16 to A19).
		PPG9, PPGB, PPGD, PPGF		Output pins for PPGs
99 to 2	1 to 4	P24 to P27	G	General purpose I/O. The register can be set to select whether to use a pull-up resistor. In external bus mode, the pin is enabled as a general-purpose I/O port when the corresponding bit in the external address output control register (HACR) is 1.
		A20 to A23		Output pins for A20 to A23 of the external address bus. When the corresponding bit in the external address output control register (HACR) is 0, the pins are enabled as high address output pins (A20 to A23).
		IN0 to IN3		Data sample input pins for input captures ICU0 to ICU3
3	5	P30	G	General purpose I/O. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
		ALE		Address latch enable output pin. This function is enabled when the external bus is enabled.
		IN4		Data sample input pin for input capture ICU4

(Continued)

# MB90340 Series

Pin No.		Pin name	Circuit type	Function
LQFP100*2	QFP100*1			
4	6	P31	G	General purpose I/O. The register can be set to select whether to use a pull-up resistor. This function is enabled in single-chip mode.
		$\overline{RD}$		Read strobe output pin for the data bus. This function is enabled when the external bus is enabled.
		IN5		Data sample input pin for input capture ICU5
5	7	P32	G	General purpose I/O. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or with the $\overline{WR}/\overline{WRL}$ pin output disabled.
		$\overline{WRL} / \overline{WR}$		Write strobe output pin for the data bus. This function is enabled when both the external bus and the $\overline{WR}/\overline{WRL}$ pin output are enabled. $\overline{WRL}$ is used to write-strobe 8 lower bits of the data bus in 16-bit access while $\overline{WR}$ is used to write-strobe 8 bits of the data bus in 8-bit access.
		RX2		RX input pin for CAN2 Interface (EVA devices)
		INT10R		External interrupt request input pin for INT10
6	8	P33	G	General purpose I/O. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or with the $\overline{WRH}$ pin output disabled.
		$\overline{WRH}$		Write strobe output pin for the 8 higher bits of the data bus. This function is enabled when the external bus is enabled, when the external bus 16-bit mode is selected, and when the $\overline{WRH}$ output pin is enabled.
		TX2		TX Output pin for CAN2 (EVA devices)
7	9	P34	G	General purpose I/O. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or with the hold function disabled.
		HRQ		Hold request input pin. This function is enabled when both the external bus and the hold function are enabled.
		OUT4		Waveform output pin for output compare OCU4
8	10	P35	G	General purpose I/O. The register can be set to select whether to use a pull-up resistor. This function is enabled either in single-chip mode or with the hold function disabled.
		$\overline{HAK}$		Hold acknowledge output pin. This function is enabled when both the external bus and the hold function are enabled.
		OUT5		Waveform output pin for output compare OCU6

## ■ HANDLING DEVICES

Special care is required for the following when handling the device :

- Preventing latch-up
- Treatment of unused pins
- Using external clock
- Precautions for when not using a sub clock signal
- Notes on during operation of PLL clock mode
- Power supply pins ( $V_{CC}/V_{SS}$ )
- Pull-up/down resistors
- Crystal Oscillator Circuit
- Turning-on Sequence of Power Supply to A/D Converter and Analog Inputs
- Connection of Unused Pins of A/D Converter
- Notes on Energization
- Stabilization of power supply voltage
- Initialization
- Port0 to port3 output during Power-on(**External-bus mode**)
- Notes on using CAN Function
- Flash security Function

### 1. Preventing latch-up

**CMOS IC chips may suffer latch-up under the following conditions :**

- A voltage higher than  $V_{CC}$  or lower than  $V_{SS}$  is applied to an input or output pin.
- A voltage higher than the rated voltage is applied between  $V_{CC}$  and  $V_{SS}$ .
- The  $AV_{CC}$  power supply is applied before the  $V_{CC}$  voltage.

Latch-up may increase the power supply current drastically, causing thermal damage to the device.

For the same reason, also be careful not to let the analog power-supply voltage ( $AV_{CC}$ ,  $AV_{RH}$ ) exceed the digital power-supply voltage.

### 2. Handling unused pins

Leaving unused input pins open may result in misbehavior or latch up and possible permanent damage of the device. Therefore they must be pulled up or pulled down through resistors. In this case those resistors should be more than 2 k $\Omega$  .

Unused bidirectional pins should be set to the output state and can be left open, or the input state with the above described connection.

### 3. Using external clock

To use external clock, drive the X0 pin and leave X1 pin open.

### 4. Precautions for when not using a sub clock signal

If you do not connect pins X0A and X1A to an oscillator, use pull-down handling on the X0A pin, and leave the X1A pin open.

# MB90340 Series

## 5. Notes on during operation of PLL clock mode

If the PLL clock mode is selected, the microcontroller attempt to be working with the self-oscillating circuit even when there is no external oscillator or external clock input is stopped. Performance of this operation, however, cannot be guaranteed.

## 6. Power supply pins ( $V_{CC}/V_{SS}$ )

- If there are multiple  $V_{CC}$  and  $V_{SS}$  pins, from the point of view of device design, pins to be of the same potential are connected the inside of the device to prevent such malfunctioning as latch up.  
To reduce unnecessary radiation, prevent malfunctioning of the strobe signal due to the rise of ground level, and observe the standard for total output current, be sure to connect the  $V_{CC}$  and  $V_{SS}$  pins to the power supply and ground externally.
- Connect  $V_{CC}$  and  $V_{SS}$  to the device from the current supply source at a low impedance.
- As a measure against power supply noise, connect a capacitor of about 0.1  $\mu\text{F}$  as a bypass capacitor between  $V_{CC}$  and  $V_{SS}$  in the vicinity of  $V_{CC}$  and  $V_{SS}$  pins of the device

## 7. Pull-up/down resistors

The MB90340 Series does not support internal pull-up/down resistors (Port 0 to Port 3: built-in pull-up resistors). Use external components where needed.

## 8. Crystal Oscillator Circuit

Noises around X0 or X1 pins may be possible causes of abnormal operations. Make sure to provide bypass capacitors via shortest distance from X0, X1 pins, crystal oscillator (or ceramic resonator) and ground lines, and make sure, to the utmost effort, that lines of oscillation circuit not cross the lines of other circuits.

It is highly recommended to provide a printed circuit board art work surrounding X0 and X1 pins with a ground area for stabilizing the operation.

## 9. Turning-on Sequence of Power Supply to A/D Converter and Analog Inputs

Make sure to turn on the A/D converter power supply ( $AV_{CC}$ ,  $AV_{RH}$ ,  $AV_{RL}$ ) and analog inputs (AN0 to AN23) after turning-on the digital power supply ( $V_{CC}$ ).

Turn-off the digital power after turning off the A/D converter supply and analog inputs. In this case, make sure that the voltage not exceed  $AV_{RH}$  or  $AV_{CC}$  (turning on/off the analog and digital power supplies simultaneously is acceptable).

## 10. Connection of Unused Pins of A/D Converter if A/D Converter is used

Connect unused pins of A/D converter to  $AV_{CC} = V_{CC}$ ,  $AV_{SS} = AV_{RH} = AV_{RL} = V_{SS}$ .

## 11. Notes on Energization

To prevent the internal regulator circuit from malfunctioning, set the voltage rise time during energization at 50 or more  $\mu\text{s}$  (0.2 V to 2.7 V)

## 12. Stabilization of power supply voltage

A sudden change in the supply voltage may cause the device to malfunction even within the specified  $V_{\text{CC}}$  supply voltage operating range. Therefore, the  $V_{\text{CC}}$  supply voltage should be stabilized.

For reference, the supply voltage should be controlled so that  $V_{\text{CC}}$  ripple variations (peak-to-peak value) at commercial frequencies (50 Hz to 60 Hz) fall below 10% of the standard  $V_{\text{CC}}$  supply voltage and the coefficient of fluctuation does not exceed 0.1 V/ms at instantaneous power switching.

## 13. Initialization

In the device, there are internal registers which are initialized only by a power-on reset. To initialize these registers, turn on the power again.

## 14. Port 0 to port 3 output during Power-on (External-bus mode)

As shown below, when power is turned on in External-Bus mode, in spite of reset input, there is a possibility that output signal of Port 0 to Port 3 might be unstable.

## 15. Notes on using CAN Function

To use CAN function, please set '1' to DIRECT bit of CAN Direct Mode Register (CDMR).  
If DIRECT bit is set to '0' (initial value), wait states will be performed when accessing CAN registers.  
Please refer to Hardware Manual of MB90340 series for detail of CAN Direct Mode Register.

## 16. Flash security Function (except for MB90F346A)

The security bit is located in the area of the flash memory.  
If protection code 01<sub>H</sub> is written in the security bit, the flash memory is in the protected state by security.  
Therefore please do not write 01<sub>H</sub> in this address if you do not use the security function.  
Please refer to following table for the address of the security bit.

	Flash memory size	Address for security bit
MB90F347 MMB90F347A	Embedded 1 Mbit Flash Memory	FE0001 <sub>H</sub>
MB90F342A MB90F349A	Embedded 2 Mbit Flash Memory	FC0001 <sub>H</sub>
MB90F343A	Embedded 3 Mbit Flash Memory	F90001 <sub>H</sub>
MB90F345A	Embedded 4 Mbit Flash Memory	F80001 <sub>H</sub>

: No access

**Note :** The high-order portion of bank 00 gives the image of the FF bank ROM to make the small model of the C compiler effective. Since the low-order 16 bits are the same, the table in ROM can be referenced without using the far specification in the pointer declaration.

For example, an attempt to access 00C00h accesses the value at FFC00h in ROM.

The ROM area in bank FF exceeds 32 Kbytes, and its entire image cannot be shown in bank 00.

The image between FF800h and FFFFFh is visible in bank 00, while the image between FF000h and FF7FFFh is visible only in bank FF.

Notes : • Initial value of "X" represents unknown value.

- Any write access to reserved addresses in I/O map should not be performed. A read access to reserved addresses results in reading "X".

## ■ CAN CONTROLLERS

The CAN controller has the following features :

- Conforms to CAN Specification Version 2.0 Part A and B
  - Supports transmission/reception in standard frame and extended frame formats
- Supports transmitting of data frames by receiving remote frames
- 16 transmitting/receiving message buffers
  - 29-bit ID and 8-byte data
  - Multi-level message buffer configuration
- Provides full-bit comparison, full-bit mask, acceptance register 0/acceptance register 1 for each message buffer as ID acceptance mask
  - Two acceptance mask registers in either standard frame format or extended frame formats
- Bit rate programmable from 10 Kbits/s to 2 Mbits/s (when input clock is at 16 MHz)

## ■ ELECTRICAL CHARACTERISTICS

### 1. Absolute Maximum Ratings

( $V_{SS} = AV_{SS} = 0\text{ V}$ )

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
Power supply voltage	$V_{CC}$	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	
	$AV_{CC}$	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	$V_{CC} = AV_{CC} \times 1$
	$AV_{RH}$ , $AV_{RL}$	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	$AV_{CC} \geq AV_{RH}$ , $AV_{CC} \geq AV_{RL}$ , $AV_{RH} \geq AV_{RL}$
Input voltage	$V_I$	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	*2
Output voltage	$V_O$	$V_{SS} - 0.3$	$V_{SS} + 6.0$	V	*2
Maximum Clamp Current	$I_{CLAMP}$	-4.0	+4.0	mA	*4
Total Maximum Clamp Current	$\Sigma  I_{CLAMP} $	—	40	mA	*4
"L" level maximum output current	$I_{OL}$	—	15	mA	*3
"L" level average output current	$I_{OLAV}$	—	4	mA	*3
"L" level maximum overall output current	$\Sigma I_{OL}$	—	100	mA	*3
"L" level average overall output current	$\Sigma I_{OLAV}$	—	50	mA	*3
"H" level maximum output current	$I_{OH}$	—	-15	mA	*3
"H" level average output current	$I_{OHAV}$	—	-4	mA	*3
"H" level maximum overall output current	$\Sigma I_{OH}$	—	-100	mA	*3
"H" level average overall output current	$\Sigma I_{OHAV}$	—	-50	mA	*3
Power consumption	$P_D$	—	340	mW	MB90F347
Operating temperature	$T_A$	-40	+105	°C	
Storage temperature	$T_{STG}$	-55	+150	°C	

(Continued)

(Continued)

- \*1: Set  $AV_{CC}$  and  $V_{CC}$  to the same voltage. Make sure that  $AV_{CC}$  does not exceed  $V_{CC}$  and that the voltage at the analog inputs does not exceed  $AV_{CC}$  when the power is switched on.
- \*2:  $V_I$  and  $V_O$  should not exceed  $V_{CC} + 0.3$  V.  $V_I$  should not exceed the specified ratings. However if the maximum current to/from an input is limited by some means with external components, the  $I_{CLAMP}$  rating supercedes the  $V_I$  rating.
- \*3: Applicable to pins : P00 to P07, P10 to P17, P20 to P27, P30 to P37, P40 to P47, P50 to P57, P60 to P67, P70 to P77, P80 to P87, P90 to P97, PA0 to PA1
- \*4:
  - Applicable to pins: P00 to P07, P10 to P17, P20 to P27, P30 to P37, P40 to P47, P50 to P57 (EVA device : P50 to P55) , P60 to P67, P70 to P77, P80 to P87, P90 to P97, PA0 to PA1
  - Use within recommended operating conditions.
  - Use at DC voltage (current)
  - The +B signal should always be applied a limiting resistance placed between the +B signal and the microcontroller.
  - The value of the limiting resistance should be set so that when the +B signal is applied the input current to the microcontroller pin does not exceed rated values, either instantaneously or for prolonged periods.
  - Note that when the microcontroller drive current is low, such as in the power saving modes, the +B input potential may pass through the protective diode and increase the potential at the  $V_{CC}$  pin, and this may affect other devices.
  - Note that if a +B signal is input when the microcontroller power supply is off (not fixed at 0 V) , the power supply is provided from the pins, so that incomplete operation may result.
  - Note that if the +B input is applied during power-on, the power supply is provided from the pins and the resulting supply voltage may not be sufficient to operate the power-on reset.
  - Care must be taken not to leave the +B input pin open.
  - Sample recommended circuits:

• Input/output equivalent circuits

**WARNING:** Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

## 2. Recommended Conditions

( $V_{SS} = AV_{SS} = 0\text{ V}$ )

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
Power supply voltage	$V_{CC}, AV_{CC}$	4.0	5.0	5.5	V	Under normal operation
		3.5	5.0	5.5	V	Under normal operation, when not using the A/D converter and not Flash programming.
		4.5	5.0	5.5	V	When External bus is used.
		3.0	—	5.5	V	Maintains RAM data in stop mode
Smooth capacitor	$C_s$	0.1	—	1.0	$\mu\text{F}$	Use a ceramic capacitor or capacitor of better AC characteristics. Capacitor at the $V_{CC}$ should be greater than this capacitor.
Operating temperature	$T_A$	-40	—	+105	$^{\circ}\text{C}$	

**C Pin Connection Diagram**

**WARNING:** The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

## 3. DC Characteristics

( $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0\text{ V}$ )

\* : The power supply current is measured with an external clock.

## 4. AC Characteristics

### (1) Clock Timing

( $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0\text{ V}$ )

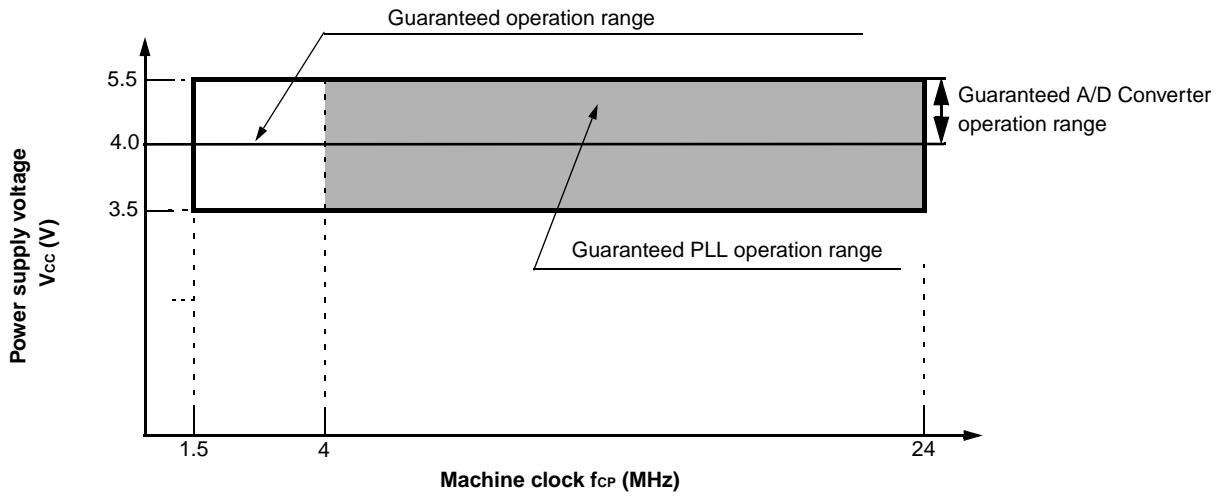

Parameter	Symbol	Pin	Value			Unit	Remarks
			Min	Typ	Max		
Clock frequency	$f_c$	X0, X1	3	—	16	MHz	When using an oscillation circuit
		X0, X1	3	—	24	MHz	When using an external clock*
	$f_{CL}$	X0A, X1A	—	32.768	100	kHz	
Clock cycle time	$t_{CYL}$	X0, X1	62.5	—	333	ns	When using an oscillation circuit
		X0, X1	41.67	—	333	ns	When using an external clock
	$t_{CYLL}$	X0A, X1A	10	30.5	—	$\mu\text{s}$	
Input clock pulse width	$P_{WH}, P_{WL}$	X0	10	—	—	ns	Duty ratio is about 30% to 70%.
	$P_{WHL}, P_{WLL}$	X0A	5	15.2	—	$\mu\text{s}$	
Input clock rise and fall time	$t_{CR}, t_{CF}$	X0	—	—	5	ns	When using external clock
Internal operating clock frequency (machine clock)	$f_{CP}$	—	1.5	—	24	MHz	When using main clock
	$f_{CPL}$	—	—	8.192	50	kHz	When using sub clock
Internal operating clock cycle time (machine clock)	$t_{CP}$	—	41.67	—	666	ns	When using main clock
	$t_{CPL}$	—	20	122.1	—	$\mu\text{s}$	When using sub clock

\* : When selecting the PLL clock, the range of clock frequency is limited. Use this product within range as mentioned in "Relation among external clock frequency and machine clock frequency".

**Clock Timing**

# MB90340 Series

**Guaranteed operation range of MB90340 series**

\* : When using the oscillation circuit, the maximum oscillation clock frequency is 16 MHz

**External clock frequency and Machine clock frequency**

## (2) Reset Standby Input

( $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0.0\text{ V}$ )

Parameter	Symbol	Pin	Value		Unit	Remarks	
			Min	Max			
Reset input time	$t_{RSTL}$	$\overline{RST}$	500	—	ns	Under normal operation	
			Oscillation time of oscillator* + 100 $\mu\text{s}$		—	ns	In Stop mode, Sub Clock mode, Sub Sleep mode and Watch mode
			100	—	$\mu\text{s}$	In Time Timer mode	

\* : Oscillation time of oscillator is the time that the amplitude reaches 90%.

In the crystal oscillator, the oscillation time is between several ms and to tens of ms. In FAR / ceramic oscillators, the oscillation time is between hundreds of  $\mu\text{s}$  to several ms. With an external clock, the oscillation time is 0 ms.

# MB90340 Series

## (3) Power On Reset

( $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0.0\text{ V}$ )

Parameter	Symbol	Pin	Condition	Value		Unit	Remarks
				Min	Max		
Power on rise time	$t_R$	$V_{CC}$	—	0.05	30	ms	
Power off time	$t_{OFF}$	$V_{CC}$	—	1	—	ms	Due to repetitive operation

If you change the power supply voltage too rapidly, a power on reset may occur. We recommend that you startup smoothly by restraining voltages when changing the power supply voltage during operation, as shown in the figure below. Perform while not using the PLL clock. However, if voltage drops are within 1 V/s, you can operate while using the PLL clock.

## (4) Clock Output Timing

( $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $V_{SS} = 0.0\text{ V}$ ,  $f_{CP} \leq 24\text{ MHz}$ )

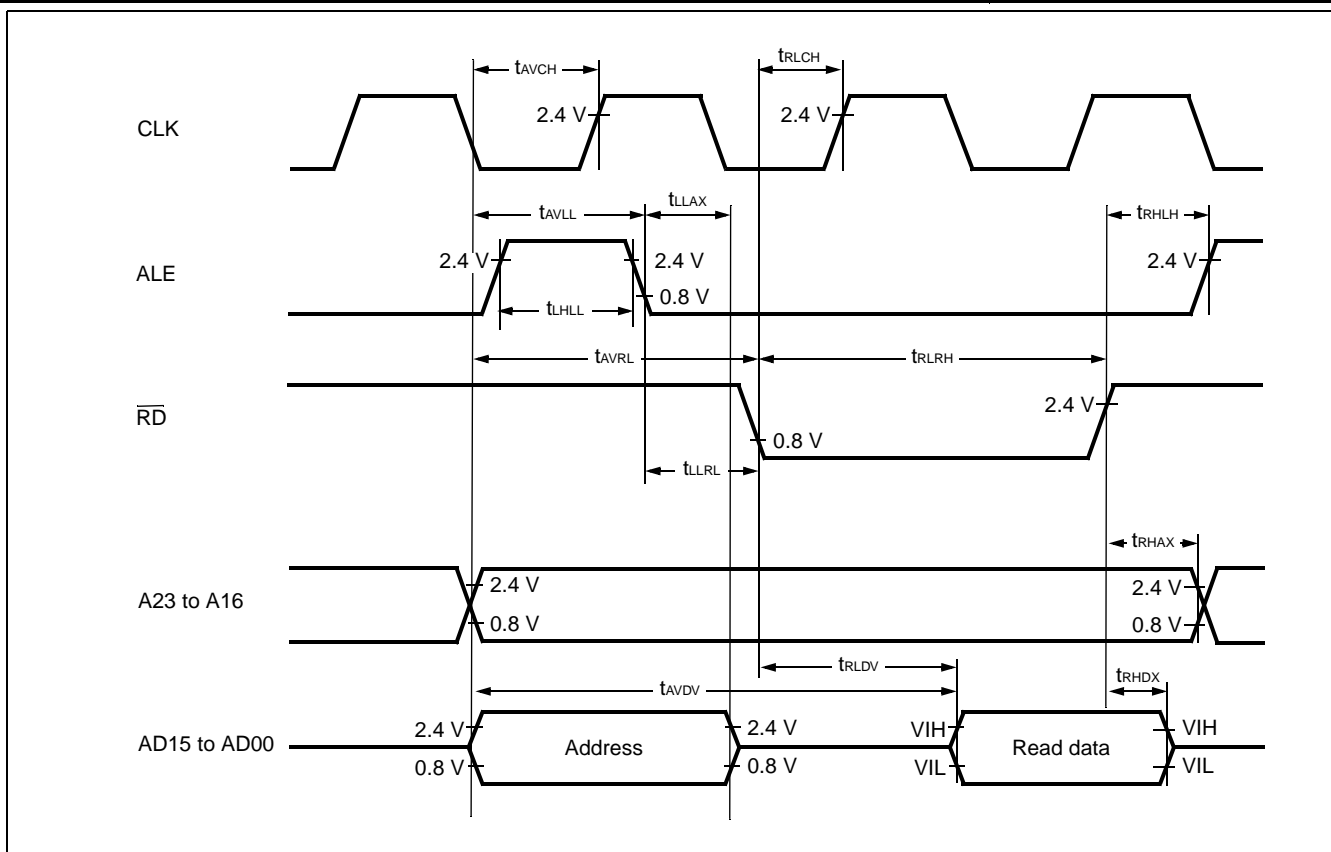

Parameter	Symbol	Pin	Condition	Value		Unit	Remarks
				Min	Max		
Cycle time	$t_{CYC}$	CLK	—	62.5	—	ns	$f_{CP} = 16\text{ MHz}$
				41.76	—	ns	$f_{CP} = 24\text{ MHz}$
CLK $\uparrow \rightarrow$ CLK $\downarrow$	$t_{CHCL}$	CLK	—	20	—	ns	$f_{CP} = 16\text{ MHz}$
				13	—	ns	$f_{CP} = 24\text{ MHz}$

## (5) Bus Timing (Read)

( $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $V_{SS} = 0.0\text{ V}$ ,  $f_{CP} \leq 24\text{ MHz}$ )

Parameter	Symbol	Pin	Condition	Value		Unit	Remarks
				Min	Max		
ALE pulse width	$t_{LHLL}$	ALE	—	$t_{CP}/2 - 10$	—	ns	
Valid address $\Rightarrow$ ALE $\downarrow$ time	$t_{AVLL}$	ALE, A23 to A16, AD15 to AD00		$t_{CP}/2 - 20$	—	ns	
ALE $\downarrow \Rightarrow$ Address valid time	$t_{LLAX}$	ALE, AD15 to AD00		$t_{CP}/2 - 15$	—	ns

## (10) Trigger Input Timing

( $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = 0.0\text{ V}$ )

Parameter	Symbol	Pin	Condition	Value		Unit	Remarks
				Min	Max		
Input pulse width	$t_{TRGH}$ $t_{TRGL}$	INT0 to INT15, INT0R to INT15R, ADTG	—	$5 t_{CP}$	—	ns	

## (11) Timer Related Resource Input Timing

( $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = 0\text{ V}$ )

Parameter	Symbol	Pin	Condition	Value		Unit	Remarks
				Min	Max		
Input pulse width	$t_{TIWH}$	TIN0 to TIN3, IN0 to IN7	—	4 $t_{CP}$	—	ns	
	$t_{TIWL}$						

## (12) Timer Related Resource Output Timing

( $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = 0.0\text{ V}$ )

Parameter	Symbol	Pin	Condition	Value		Unit	Remarks
				Min	Max		
CLK $\uparrow$ $\Rightarrow$ $T_{OUT}$ change time	$t_{ro}$	TOT0 to TOT3, PPG0 to PPGF	—	30	—	ns	

# MB90340 Series

## (13) I<sup>2</sup>C Timing

(T<sub>A</sub> = -40°C to +105°C, V<sub>CC</sub> = 5.0 V ± 10%, V<sub>SS</sub> = 0.0 V)

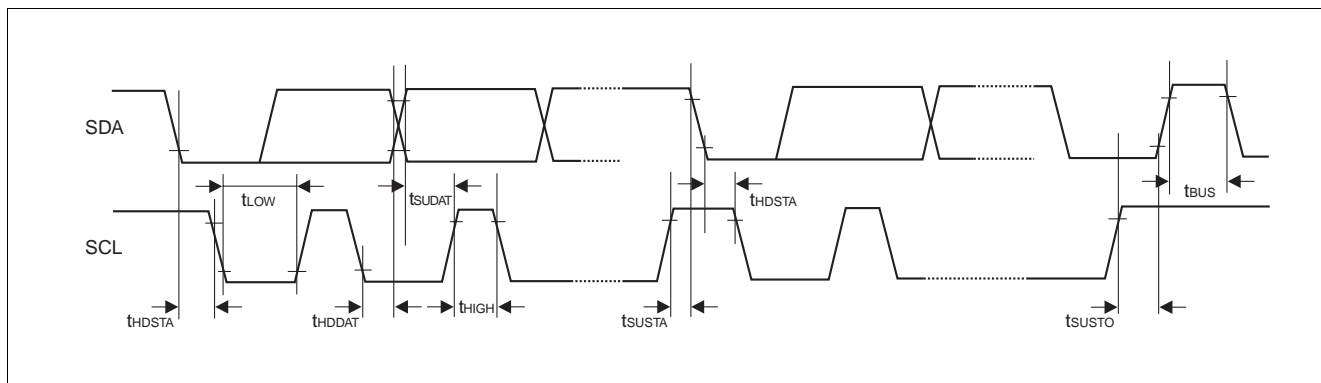

Parameter	Symbol	Condition	Standard-mode		Fast-mode*4		Unit
			Min	Max	Min	Max	
SCL clock frequency	f <sub>SCL</sub>	R = 1.7 kΩ, C = 50 pF*1	0	100	0	400	kHz
Hold time (repeated) START condition SDA↓→SCL↓	t <sub>HDSTA</sub>		4.0	—	0.6	—	μs
"L" width of the SCL clock	t <sub>LOW</sub>		4.7	—	1.3	—	μs
"H" width of the SCL clock	t <sub>HIGH</sub>		4.0	—	0.6	—	μs
Set-up time for a repeated START condition SCL↑→SDA↓	t <sub>SUSTA</sub>		4.7	—	0.6	—	μs
Data hold time SCL↓→SDA↓↑	t <sub>HDDAT</sub>		0	3.45*2	0	0.9*3	μs
Data set-up time SDA↓↑→SCL↑	t <sub>SUDAT</sub>		250	—	100	—	ns
Set-up time for STOP condition SCL↑→SDA↑	t <sub>SUSTO</sub>		4.0	—	0.6	—	μs
Bus free time between a STOP and START condition	t <sub>BUS</sub>	4.7	—	1.3	—	μs	

\*1 : R,C : Pull-up resistor and load capacitor of the SCL and SDA lines.

\*2 : The maximum t<sub>HDDAT</sub> have only to be met if the device does not stretch the "L" width (t<sub>LOW</sub>) of the SCL signal.

\*3 : A Fast-mode I<sup>2</sup>C-bus device can be used in a Standard-mode I<sup>2</sup>C-bus system, but the requirement t<sub>SUDAT</sub> ≥ 250 ns must then be met.

\*4 : For use at over 100 kHz, set the machine clock to at least 6 MHz.

## 5. A/D Converter

( $T_A = -40\text{ }^\circ\text{C}$  to  $+105\text{ }^\circ\text{C}$ ,  $3.0\text{ V} \leq AVRH - AVRL$ ,  $V_{CC} = AV_{CC} = 5.0\text{ V} \pm 10\%$ ,  $f_{CP} \leq 24\text{ MHz}$ ,  $V_{SS} = AV_{SS} = 0\text{ V}$ )

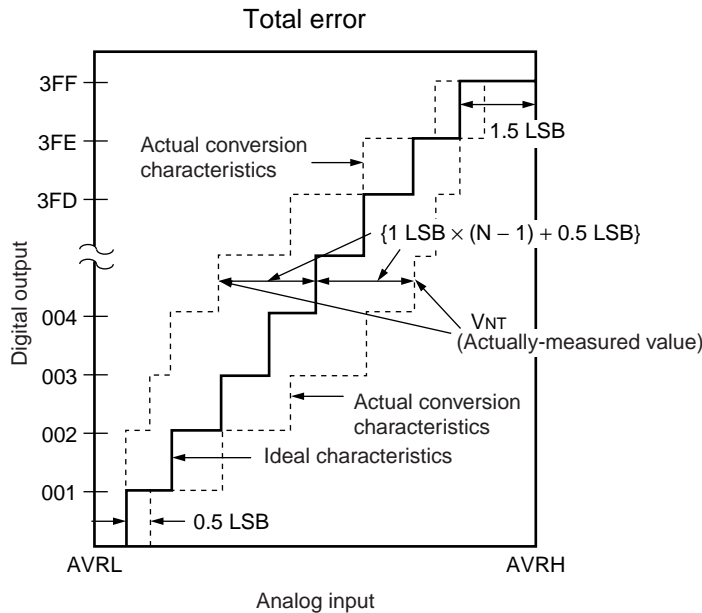

Parameter	Symbol	Pin	Value			Unit	Remarks
			Min	Typ	Max		
Resolution	—	—	—	—	10	bit	
Total error	—	—	—	—	$\pm 3.0$	LSB	
Nonlinearity error	—	—	—	—	$\pm 2.5$	LSB	
Differential nonlinearity error	—	—	—	—	$\pm 1.9$	LSB	
Zero reading voltage	$V_{OT}$	AN0 to AN23	$AVRL - 1.5$	$AVRL + 0.5$	$AVRL + 2.5$	LSB	
Full scale reading voltage	$V_{FST}$	AN0 to AN23	$AVRH - 3.5$	$AVRH - 1.5$	$AVRH + 0.5$	LSB	
Compare time	—	—	1.0	—	16,500	$\mu\text{s}$	$4.5\text{ V} \leq AV_{CC} \leq 5.5\text{ V}$
			2.0				$4.0\text{ V} \leq AV_{CC} < 4.5\text{ V}$
Sampling time	—	—	0.5	—	$\infty$	$\mu\text{s}$	$4.5\text{ V} \leq AV_{CC} \leq 5.5\text{ V}$
			1.2				$4.0\text{ V} \leq AV_{CC} < 4.5\text{ V}$
Analog port input current	$I_{AIN}$	AN0 to AN23	-0.3	—	+0.3	$\mu\text{A}$	
Analog input voltage range	$V_{AIN}$	AN0 to AN23	AVRL	—	AVRH	V	
Reference voltage range	—	AVRH	$AVRL + 2.7$	—	$AV_{CC}$	V	
	—	AVRL	0	—	$AVRH - 2.7$	V	
Power supply current	$I_A$	$AV_{CC}$	—	3.5	7.5	mA	
	$I_{AH}$	$AV_{CC}$	—	—	5	$\mu\text{A}$	*
Reference voltage current	$I_R$	AVRH	—	600	900	$\mu\text{A}$	
	$I_{RH}$	AVRH	—	—	5	$\mu\text{A}$	*
Offset between input channels	—	AN0 to AN23	—	—	4	LSB	

\* : IF A/D convertor is not operating, a current when CPU is stopped is applicable ( $V_{CC} = AV_{CC} = AVRH = 5.0\text{ V}$ ) .

Note : The accuracy gets worse as  $AVRH - AVRL$  becomes smaller.

## 6. Definition of A/D Converter Terms

- Resolution : Analog variation that is recognized by an A/D converter.
- Non linearity error : Deviation between a line across zero-transition line ( “00 0000 0000” ← → “00 0000 0001” ) and full-scale transition line ( “11 1111 1110” ← → “11 1111 1111” ) and actual conversion characteristics.
- Differential linearity error : Deviation of input voltage, which is required for changing output code by 1 LSB, from an ideal value.
- Total error : Difference between an actual value and an ideal value. A total error includes zero transition error, full-scale transition error, and linear error.
- Zero reading voltage : Input voltage which results in the minimum conversion value.
- Full scale reading voltage : Input voltage which results in the maximum conversion value.

$$\text{Total error of digital output "N"} = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + 0.5 \text{ LSB}\}}{1 \text{ LSB}} \text{ [LSB]}$$

$$1 \text{ LSB} = (\text{Ideal value}) \frac{AVRH - AVRL}{1024} \text{ [V]}$$

$$V_{OT} (\text{Ideal value}) = AVRL + 0.5 \text{ LSB [V]}$$

$$V_{FST} (\text{Ideal value}) = AVRH - 1.5 \text{ LSB [V]}$$

$V_{NT}$  : A voltage at which digital output transitions from (N - 1) to N.

(Continued)

(Continued)

$$\text{Non linearity error of digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + V_{OT}\}}{1 \text{ LSB}} \text{ [LSB]}$$

$$\text{Differential linearity error of digital output } N = \frac{V_{(N+1)T} - V_{NT}}{1 \text{ LSB}} - 1 \text{ LSB [LSB]}$$

$$1 \text{ LSB} = \frac{V_{FST} - V_{OT}}{1022} \text{ [V]}$$

$V_{OT}$  : Voltage at which digital output transits from "000<sub>H</sub>" to "001<sub>H</sub>."

$V_{FST}$  : Voltage at which digital output transits from "3FE<sub>H</sub>" to "3FF<sub>H</sub>."

# MB90340 Series

## 7. Notes on A/D Converter Section

Use the device with external circuits of the following output impedance for analog inputs :

Recommended output impedance of external circuits are : Approx. 1.5 kΩ or lower ( $4.0\text{ V} \leq AV_{CC} \leq 5.5\text{ V}$ , sampling period  $\leq 0.5\ \mu\text{s}$ )

If an external capacitor is used, in consideration of the effect by tap capacitance caused by external capacitors and on-chip capacitors, capacitance of the external one is recommended to be several thousand times as high as internal capacitor.

If output impedance of an external circuit is too high, a sampling period for an analog voltage may be insufficient.

### • Analog input circuit model

Note : Use the values in the figure only as a guideline.

## 8. Flash Memory Program/Erase Characteristics

Parameter	Conditions	Value			Unit	Remarks
		Min	Typ	Max		
Sector erase time	$T_A = +25\text{ }^\circ\text{C}$ $V_{CC} = 5.0\text{ V}$	—	1	15	s	Excludes programming prior to erasure
Chip erase time		—	9	—	s	Excludes programming prior to erasure
Word (16 bit width) programming time		—	16	3,600	$\mu\text{s}$	Except for the over head time of the system
Programs/Erase cycle	—	10,000	—	—	cycle	
Flash Data Retention Time	Average $T_A = +85\text{ }^\circ\text{C}$	20	—	—	Year	*

\* : This value comes from the technology qualification (using Arrhenius equation to translate high temperature measurements into normalized value at  $+85\text{ }^\circ\text{C}$ ) .

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of Fujitsu semiconductor device; Fujitsu does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information. Fujitsu assumes no liability for any damages whatsoever arising out of the use of the information.

Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of Fujitsu or any third party or does Fujitsu warrant non-infringement of any third-party's intellectual property right or other right by using such information. Fujitsu assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that Fujitsu will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the prior authorization by Japanese government will be required for export of those products from Japan.
