The D flag is for debug only. Set to "0".

2.1.8.3 Zero Flag (Z)

The Z flag is set to "1" when the value of zero is obtained from an arithmetic operation; otherwise "0".

2.1.8.4 Sign Flag (S)

3. Memory

Figure 3.1 shows a memory map of the M32C/80 Group.

The M32C/80 Group provides 16-Mbyte address space addressed from 000000_{16} to $FFFFFF_{16}$.

The fixed interrupt vectors are allocated from address $FFFFDC_{16}$ to $FFFFFF_{16}$. It stores the starting address of each interrupt routine.

The internal RAM is allocated from address 000400_{16} to higher. For example, a 8-Kbyte internal RAM is allocated from address 000400_{16} to $0023FF_{16}$. Besides storing data, it becomes stacks when the subroutine is called or an interrupt is acknowledged.

SFRs, consisting of control registers for peripheral functions such as I/O port, A/D converter, serial I/O, timers, is allocated from address 000000_{16} to $0003FF_{16}$. All blank spaces within SFRs are reserved and cannot be accessed by users.

The special page vector table is addressed from $FFFE00_{16}$ to $FFFFDB_{16}$. It is used for the JMPS instruction and JSRS instruction. Refer to the Renesas publication **M32C/80 Series Software Manual** for details. In microprocessor mode, some spaces are reserved and cannot be accessed by users.
