

ACPL-W60L/K63L

High Speed LVTTTL Compatible 3.3 Volt/5 Volt Optocouplers

Data Sheet

Lead (Pb) Free
RoHS 6 fully
compliant

RoHS 6 fully compliant options available;
-xxxE denotes a lead-free product

Description

The ACPL-W60L/K63L are optically coupled gates that combine a GaAsP light emitting diode and an integrated high gain photo detector. The output of the detector IC is an open collector Schottky-clamped transistor. The internal shield provides a guaranteed common mode transient immunity specification of 15 kV/ μ s at 3.3V.

This unique design provides maximum AC and DC circuit isolation while achieving LVTTTL/LVCMOS compatibility. The optocoupler AC and DC operational parameters are guaranteed from -40°C to $+85^{\circ}\text{C}$ allowing trouble-free system performance.

A 0.1 μ F bypass capacitor must be connected between pins 5 and 8.

Features

- Dual Voltage Operation (3.3V/5V)
- Package clearance/creepage at 8 mm
- Low power consumption
- 15 kV/ μ s minimum Common Mode Rejection (CMR) at $V_{CM} = 1000V$
- High speed: 15 MBd typical
- LVTTTL/LVCMOS compatible
- Low input current capability: 5 mA
- Guaranteed AC and DC performance over temperature: -40°C to $+85^{\circ}\text{C}$
- Available in 6-pin stretched SO-6 and 8 pin stretched SO-8
- Safety approvals: UL, CSA, IEC/EN/DIN EN 60747-5-2 – in process

Applications

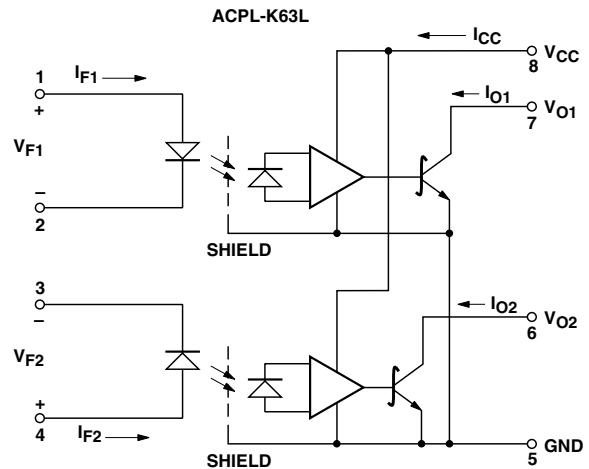

- Isolated line receiver
- Computer-peripheral interfaces
- Microprocessor system interfaces
- Digital isolation for A/D, D/A conversion
- Switching power supply
- Instrument input/output isolation
- Ground loop elimination
- Pulse transformer replacement
- Fieldbus

CAUTION: It is advised that normal static precautions be taken in handling and assembly of this component to prevent damage and/or degradation which may be induced by ESD.

Schematic Diagrams

USE OF A 0.1 μ F BYPASS CAPACITOR CONNECTED BETWEEN PINS 5 AND 8 IS RECOMMENDED (SEE NOTE 5).

These optocouplers are suitable for high speed logic interfacing, input/output buffering, as line receivers in environments that conventional line receivers cannot tolerate and are recommended for use in extremely high ground or induced noise environments.

These optocouplers are available in stretched SO-6 and SO-8 package. The part numbers are as follows:

| Part number | Package |
|-------------|----------------|
| ACPL-W60L | Stretched SO-6 |
| ACPL-K63L | Stretched SO-8 |

Ordering Information

ACPL-xxxx is UL Recognized with 3750 V_{rms} for 1 minute per UL1577 and is approved under CSA Component Acceptance Notice #5, File CA 88324.

*The Input-Output Momentary Withstand Voltage is a dielectric voltage rating that should not be interpreted as an input-output continuous voltage rating. For the continuous voltage rating refer to the IEC/EN/DIN EN 60747-5-2 Insulation Characteristics Table (if applicable), your equipment level safety specification or Avago Application Note 1074 entitled "Optocoupler Input-Output Endurance Voltage."

Notes:

- Each channel.
- Peaking circuits may produce transient input currents up to 50 mA, 50 ns maximum pulse width, provided average current does not exceed 20 mA.
- Peaking circuits may produce transient input currents up to 50 mA, 50 ns maximum pulse width, provided average current does not exceed 15 mA.
- Derate linearly above $+80^\circ\text{C}$ free-air temperature at a rate of $2.7\text{ mW}/^\circ\text{C}$.
- Bypassing of the power supply line is required, with a $0.1\ \mu\text{F}$ ceramic disc capacitor adjacent to each optocoupler as illustrated in Figure 11. Total lead length between both ends of the capacitor and the isolator pins should not exceed 20 mm.
- The t_{PLH} propagation delay is measured from the 3.75 mA point on the falling edge of the input pulse to the 1.5 V point on the rising edge of the output pulse.
- The t_{PHL} propagation delay is measured from the 3.75 mA point on the rising edge of the input pulse to the 1.5 V point on the falling edge of the output pulse.
- t_{PSK} is equal to the worst case difference in t_{PHL} and/or t_{PLH} that will be seen between units at any given temperature and specified test conditions.
- See test circuit for measurement details.
- CM_H is the maximum tolerable rate of rise on the common mode voltage to assure that the output will remain in a high logic state (i.e., $V_O > 2.0\text{ V}$).
- CM_L is the maximum tolerable rate of fall of the common mode voltage to assure that the output will remain in a low logic state (i.e., $V_O < 0.8\text{ V}$).
- For sinusoidal voltages, $(|dV_{CM}| / dt)_{\max} = \pi f_{CM} V_{CM} (p-p)$.
- Single channel device is considered a two-terminal part when pins 1, 2, 3 are shorted together, and pins 4, 5, 6 shorted together separately. Dual channel device is considered a two-terminal part when pins 1, 2, 3, 4 are shorted together, and pins 5, 6, 7, 8 are shorted together separately.
- In accordance with UL 1577, each optocoupler is proof tested by applying an insulation test voltage $\geq 4500\text{ V rms}$ for one second (leakage detection current limit, $I_{I-O} \leq 5\ \mu\text{A}$). This test is performed before the 100% production test for partial discharge (Method b) shown in the IEC/EN/DIN EN 60747-5-2 Insulation Characteristics Table, if applicable.
- Measured between the LED anode and cathode shorted together and pins 5 through 8 shorted together. For dual channel products only.
- Measured between pins 1 and 2 shorted together, and pins 3 and 4 shorted together. For dual channel products only.
