

TOSHIBA Linear C-MOS Integrated Circuit Silicon Monolithic

# TC90L01NG(TENTATIVE)

## Audio/Video Switching IC for TVs

The TC90L01NG is an audio/video switching IC for TV sets.

Conforming to I<sup>2</sup>C bus standards, it allows you to perform various switching operations through the bus lines by using a microcomputer. This IC has the functions of audio mute, ALC(Auto Level Control), audio volume and so on.

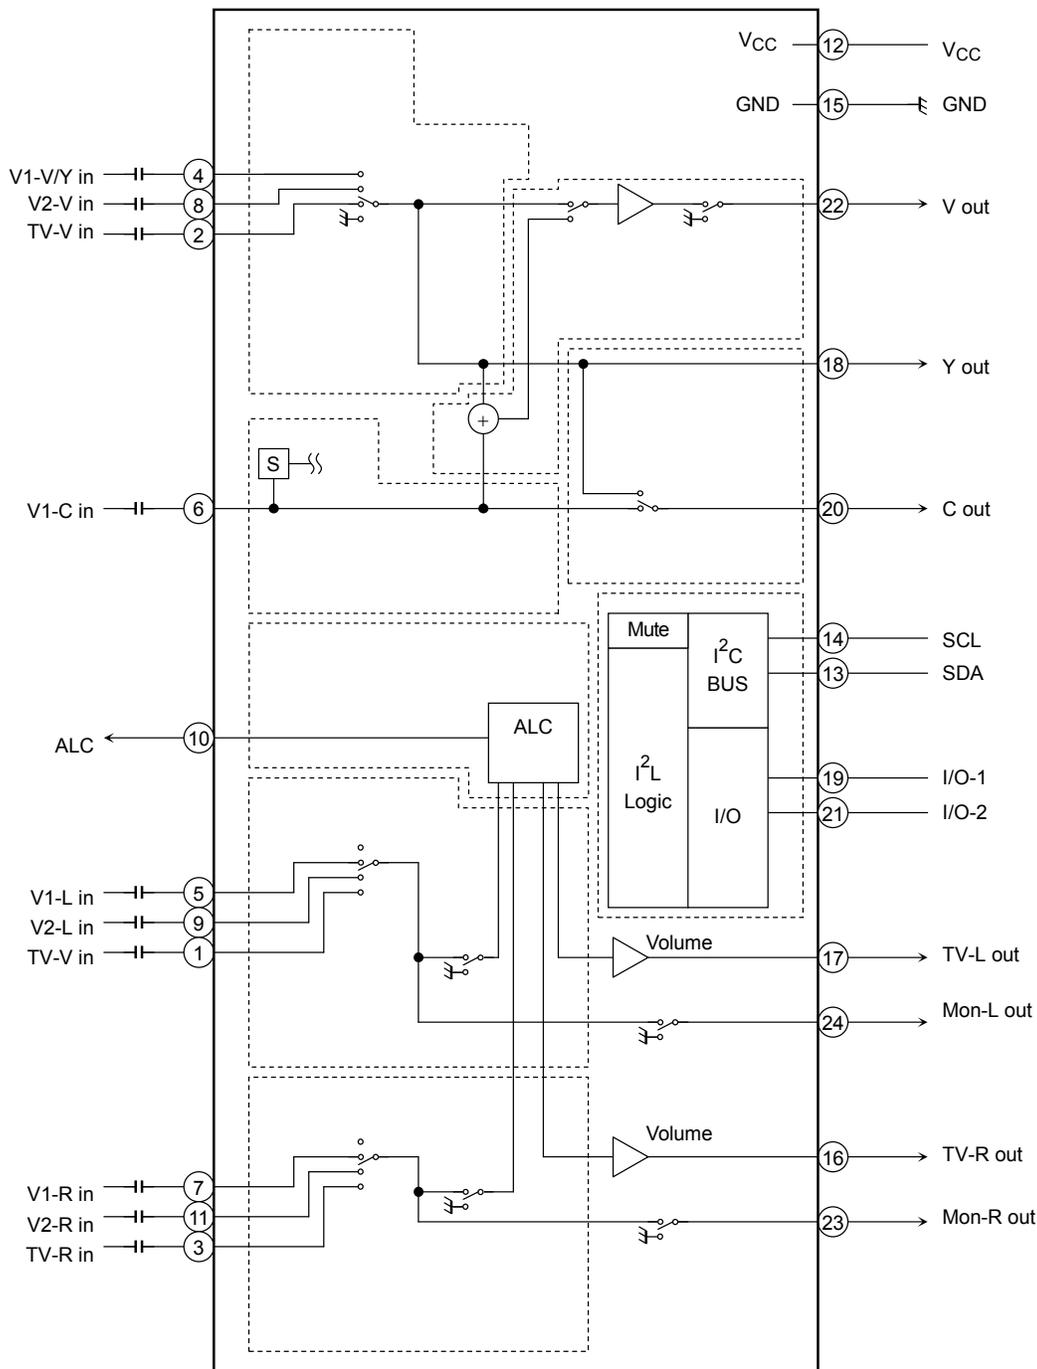

Weight  
SDIP24-P-300-1.78 : 1.22 g (typ.)

## Features

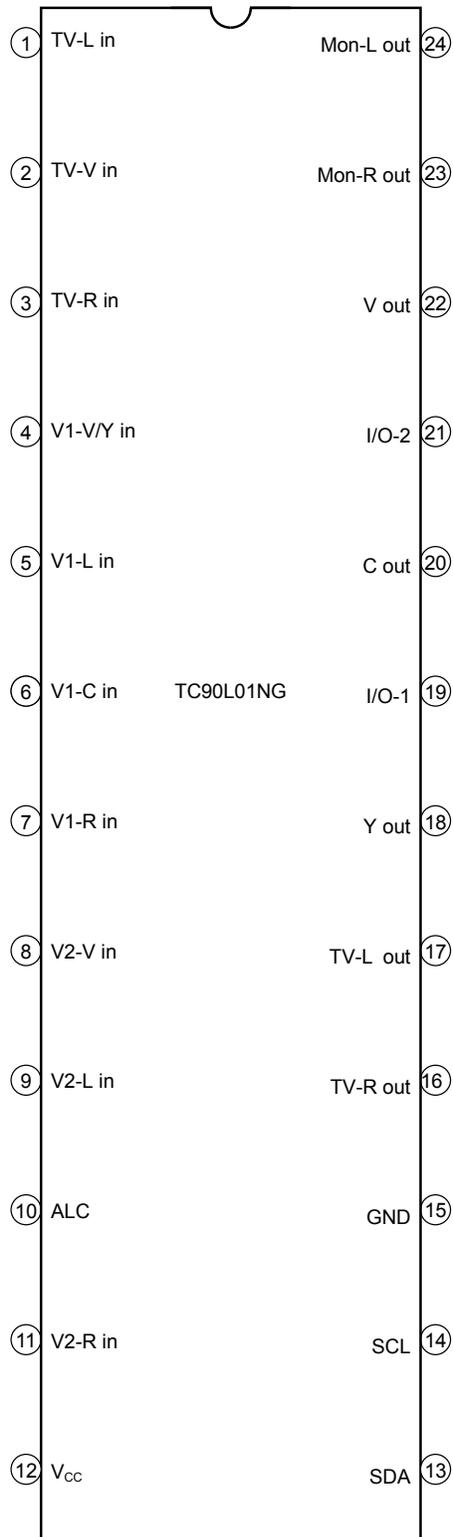

- I<sup>2</sup>C bus control
- Video : 3-channel inputs and 1-channel outputs  
(1 channels conforming to S system)
- Audio : 3-channel inputs and 1-channel outputs
- Monitor Audio out
- ALC(Auto Level Control)
- Audio volume by attenuator circuit
- Audio mute
- 2 I/O ports

## Pin Description

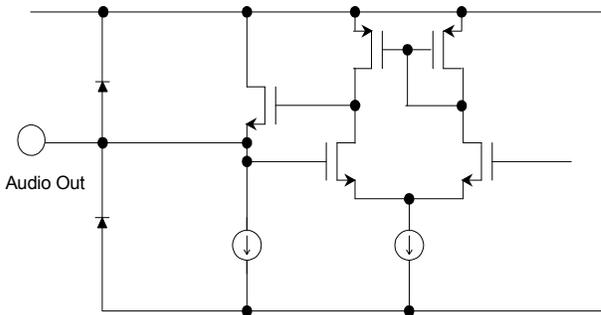

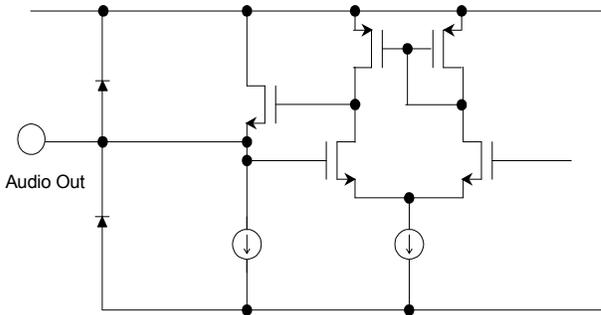

Pin No.	Name	Function	Interface
1	TV-L in	<p>This pin is for input a left audio signal from the main demodulator in the TV set. The signal fed into this pin is presented to TV-L out, and Mon-L out.</p> <p>The input dynamic range of this pin is <math>5.0 V_{p-p}</math> and the input resistance is <math>120 k\Omega</math>.</p>	
2	TV-V in	<p>This pin is for input a composite audio signal from the main demodulator in the TV set. The signal fed into this pin is presented to V out, Y out, and C out.</p> <p>The input dynamic range of this pin is <math>2.0 V_{p-p}</math> and the input resistance is <math>30 k\Omega</math>.</p>	
3	TV-R in	<p>This pin is for input a right audio signal from the main demodulator in the TV set. The signal fed into this pin is presented to TV-R out, and Mon-R out.</p> <p>The input dynamic range of this pin is <math>5.0 V_{p-p}</math> and the input resistance is <math>120 k\Omega</math>.</p>	
4	V1-V/Y in	<p>This pin is for input a luminance signal or composite video signal from an external source (V1 channel). The signal fed into this pin is presented to V out, Y out, and C out.</p> <p>The input dynamic range of this pin is <math>2.0 V_{p-p}</math> and the input resistance is <math>30 k\Omega</math>.</p>	

Pin No.	Name	Function	Interface
5	V1-L in	<p>This pin is for input a left audio signal from an external source (V1 channel). The signal fed into this pin is presented to TV-L out, and Mon-L out.</p> <p>The input dynamic range of this pin is <math>5.0 V_{p-p}</math> and the input resistance is <math>120k\Omega</math>.</p>	
6	V1-C in	<p>This pin is for input a chroma signal from an external source (S1 channel). The signal fed into this pin is presented to C out directly and to V out after being combined with the V1-Y in signal.</p> <p>The input dynamic range of this pin is <math>2.0 V_{p-p}</math> and the input resistance is <math>30 k\Omega</math>.</p>	
7	V1-R in	<p>This pin is for input a right audio signal from an external source (V1 channel). The signal fed into this pin is presented to TV-R out, and Mon-R out.</p> <p>The input dynamic range of this pin is <math>5.0 V_{p-p}</math> and the input resistance is <math>120 k\Omega</math>.</p>	
8	V2-V in	<p>This pin is for input a composite video signal from an external source (V2 channel). The signal fed into this pin is presented to V out, Y out, and C out.</p> <p>The input dynamic range of this pin is <math>2.0 V_{p-p}</math> and the input resistance is <math>30 k\Omega</math>.</p>	

Pin No.	Name	Function	Interface
9	V2-L in	<p>This pin is for input a left audio signal from an external source (V2 channel). The signal fed into this pin is presented to TV-L out and Mon-L out.</p> <p>The input dynamic range of this pin is 5.0 V<sub>p-p</sub> and the input resistance is 120Ω.</p>	
10	ALC	<p>This is an detect output pin of ALC[Auto Level Control]. It controls ALC.</p>	
11	V2-R in	<p>This pin is for input a right audio signal from an external source (V2 channel). The signal fed into this pin is presented to TV-R out and Mon-R out.</p> <p>The input dynamic range of this pin is 5.0 V<sub>p-p</sub> and the input resistance is 120 kΩ.</p>	
12	V <sub>CC</sub>	<p>This is the power supply pin. Apply 9 V to this pin. The current consumption of this pin is 34 mA.</p>	—
13	SDA	<p>This is an I<sup>2</sup>C bus data input/output pin. The input threshold level of this pin is 3.0 V.</p> <p>Make sure that the current flowing into this pin is 3.0 mA or less.</p>	

Pin No.	Name	Function	Interface
14	SCL	This is an I <sup>2</sup> C bus data input/output pin. The input threshold level of this pin is 3.0 V.	
15	GND	This is the GND pin.	—
16	TV-R out	This pin is for output right audio signal. The signal fed into TV-R in, V1-R in, or V2-R in is outputted from this pin. This output can be muted independently of TV-L out by bus control.	
17	TV-L out	This pin is for output left audio signal. The signal fed into TV-L in, V1-L in, or V2-L in is outputted from this pin. This output can be muted independently of TV-R out by bus control.	
18	Y out	This pin is for output a luminance signal. The signal fed into V1-V/Y in, V2-V in, or TV-V in is outputted from this pin.	

Pin No.	Name	Function	Interface
19	I/O-1	<p>This is an ADC input/DAC output pin.</p> <p>The ADC is a 2-level detection type (1 bits). The threshold level is 3.0 V.</p> <p>The DAC (1 bit) is an open-drain output. Make sure that the current flowing into this pin is 2.0 mA or less.</p>	
20	C out	<p>This pin is for output a chroma signal. The signal fed into V1-C in, V1-V in, V2-V in, or TV-V in is outputted from this pin.</p>	
21	I/O-2	<p>This is an ADC input/DAC output pin.</p> <p>The ADC is a 2-level detection type (1 bits). The threshold level is 3.0 V.</p> <p>The DAC (1 bit) is an open-drain output. Make sure that the current flowing into this pin is 2.0 mA or less.</p>	
22	V out	<p>This pin is for output the main channel composite video signal. The signal fed into TV-V in, V1-V in, V2-V in, or V1-Y in +V1-C in is outputted from this pin.</p> <p>This output can be muted by bus control.</p>	

Pin No.	Name	Function	Interface
23	Mon-R out	<p>This pin is for monitor-output right audio signal. The signals fed into the chip via V1-R in, V2-R in, or TV-R in is output from this pin.</p> <p>This output can be muted in combination with Mon-L out by bus control.</p>	 <p>The diagram shows a push-pull output stage. The input signal is fed into a common-emitter stage. The output of this stage drives the bases of two NPN transistors. The emitter of the top transistor is connected to the positive supply rail, and the emitter of the bottom transistor is connected to the negative supply rail. The collectors of both transistors are connected to the output pin, labeled 'Audio Out'. A bus control input is shown as a downward-pointing arrow from the top supply rail to the base of the top transistor.</p>
24	Mon-L out	<p>This pin is for monitor-output left audio signal. The signals fed into the chip via V1-L in, V2-L in, or TV-L in is output from this pin.</p> <p>This output can be muted in combination with Mon-R out by bus control.</p>	 <p>The diagram shows a push-pull output stage, identical in structure to the one for Pin 23. The input signal is fed into a common-emitter stage. The output of this stage drives the bases of two NPN transistors. The emitter of the top transistor is connected to the positive supply rail, and the emitter of the bottom transistor is connected to the negative supply rail. The collectors of both transistors are connected to the output pin, labeled 'Audio Out'. A bus control input is shown as a downward-pointing arrow from the top supply rail to the base of the top transistor.</p>

**DC Characteristics**

Characteristics	Measured Pin	Symbol	Test Circuit	Min.	Typ.	Max.	Unit	Remark
Input pin  Input resistance	TV-V in	R2	—	20	30	40	kΩ	Measure a change ΔI in the current flowing into each pin when the voltage is raised by 0.5V. Then calculate the input resistance value R.  R = 0.5 V/ΔI [Ω]
	V1-V/Y in	R4	—	20	30	40	kΩ	
	V2-V in	R8	—	20	30	40	kΩ	
	V1-C in	R6	—	20	30	40	kΩ	
	TV-L in	R1	—	80	120	160	kΩ	
	TV-R in	R3	—	80	120	160	kΩ	
	V1-L in	R5	—	80	120	160	kΩ	
	V1-R in	R7	—	80	120	160	kΩ	
	V2-L in	R9	—	80	120	160	kΩ	
	V2-R in	R11	—	80	120	160	kΩ	
Output pin  Output resistance	V out	R22	—	30	50	80	Ω	Measure a voltage change ΔV on each pin when a current of 100 μA flows into the pin. Then calculate the output resistance value R.  R = ΔV/100 μA [Ω]
	Y out	R18	—	30	50	80	Ω	
	C out	R20	—	30	50	80	Ω	
	TV-L out	R17	—	30	50	80	Ω	
	TV-R out	R16	—	30	50	80	Ω	
	Mon-L out	R24	—	30	50	80	Ω	
	Mon-R out	R23	—	30	50	80	Ω	
S mode discrimination voltage	V1-C in	VthC1	—	2.0	2.5	3.0	V	Voltage on pin 6 at which data B30 changes.
ADC input discrimination voltage	I/O 1	Vth1	—	2.5	3.0	3.5	V	High-Low threshold level of I/O-1 input (pin 19).
	I/O 2	Vth2	—	2.5	3.0	3.5	V	High-Low threshold level of I/O-2 input (pin 21).

## AC Characteristics

Characteristics	Select Mode	Symbol	Test Circuit	Min.	Typ.	Max.	Unit	Test Method
V out Input dynamic range	TV-V in	VDR2V1	—	1.5	—	—	V <sub>p-p</sub>	(1) Apply a 15 kHz sine wave to each input pin. (2) In each select mode, measure an input amplitude at which the output waveform on pin 22 begins to be distorted.
	V1-V/Y in	VDR4V1	—	1.5	—	—	V <sub>p-p</sub>	
	V2-V in	VDR8V1	—	1.5	—	—	V <sub>p-p</sub>	
	V2-C in	VDR6V1	—	1.5	—	—	V <sub>p-p</sub>	
V out Gain	TV-V in	G2V1	—	5.5	6.0	6.5	dB	(1) Apply a 15 kHz, 1.0 V <sub>p-p</sub> sine wave to each input pin. (2) In each select mode, find the gain between input and output.
	V1-V/Y in	G4V1	—	5.5	6.0	6.5	dB	
	V2-V in	G8V1	—	5.5	6.0	6.5	dB	
	V2-C in	G6V1	—	5.5	6.0	6.5	dB	
V out Frequency response	TV-V in	F2V1	—	15	—	—	MHz	(1) Apply a 1.0 V <sub>p-p</sub> sine wave to each input pin. (2) In each select mode, measure a frequency at which the output amplitude on pin 22 is 3dB down from the 15 kHz applied level.
	V1-V/Y in	F4V1	—	15	—	—	MHz	
	V2-V in	F8V1	—	15	—	—	MHz	
	V2-C in	F6V1	—	15	—	—	MHz	
V out Crosstalk	TV-V in	CT2V1	—	60	70	—	dB	(1) Apply a 3.58 MHz, 1.0 V <sub>p-p</sub> sine wave to each input pin. (2) In each select mode, compare signal output from the selected pin with leakage components from nonselected pins to find a crosstalk.

**Reference data**

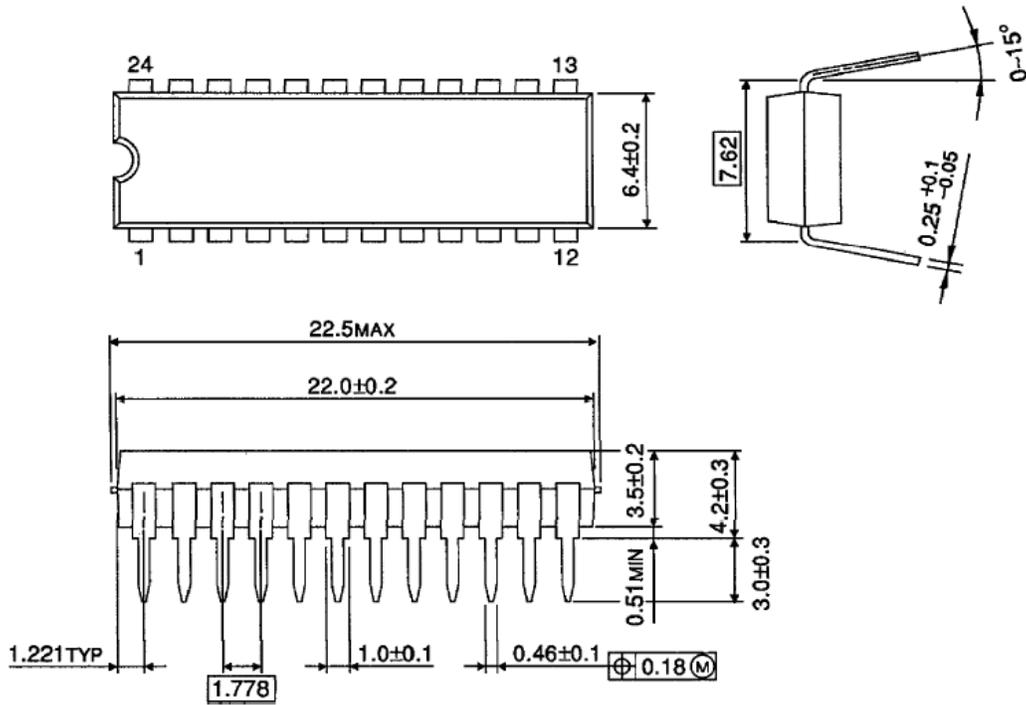

**Application Circuit**

Test Circuit

**Package Dimensions**

Weight: 1.22 g (typ.)

About solderability, following conditions were confirmed.

• Solderability

- (1) Use of Sn-37Pb solder Bath
  - solder bath temperature = 230°C
  - dipping time = 5 seconds
  - the number of times = once
  - use of R-type flux
- (2) Use of Sn-3.0Ag-0.5Cu solder
  - solder bath temperature = 245°C
  - dipping time = 5 seconds
  - the number of times = once

**RESTRICTIONS ON PRODUCT USE**

The information contained herein is subject to change without notice.

The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA for any infringements of patents or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any patent or patent rights of TOSHIBA or others.

TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.

In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..

The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.

The products described in this document are subject to the foreign exchange and foreign trade laws.

TOSHIBA products should not be embedded to the downstream products which are prohibited to be produced and sold, under any law and regulations.
