

FAN8486D (KA3086D)

2-Phase BLDC Motor Driver

Features

- Drives the BLDC motor using 2 hall sensors.
- 2-phase, full-wave drive method
- Built-in thermal shutdown (TSD) circuit
- Controls the motor speed through voltage
- Built-in bandgap circuit
- Built-in frequency Generator (FG) & Phase Generator (PG) amplifier & comparator.

Description

The FAN8486D is a monolithic integrated circuit, and it is suitable for drum motor driver of VCR system.

28-SSOP-300SG

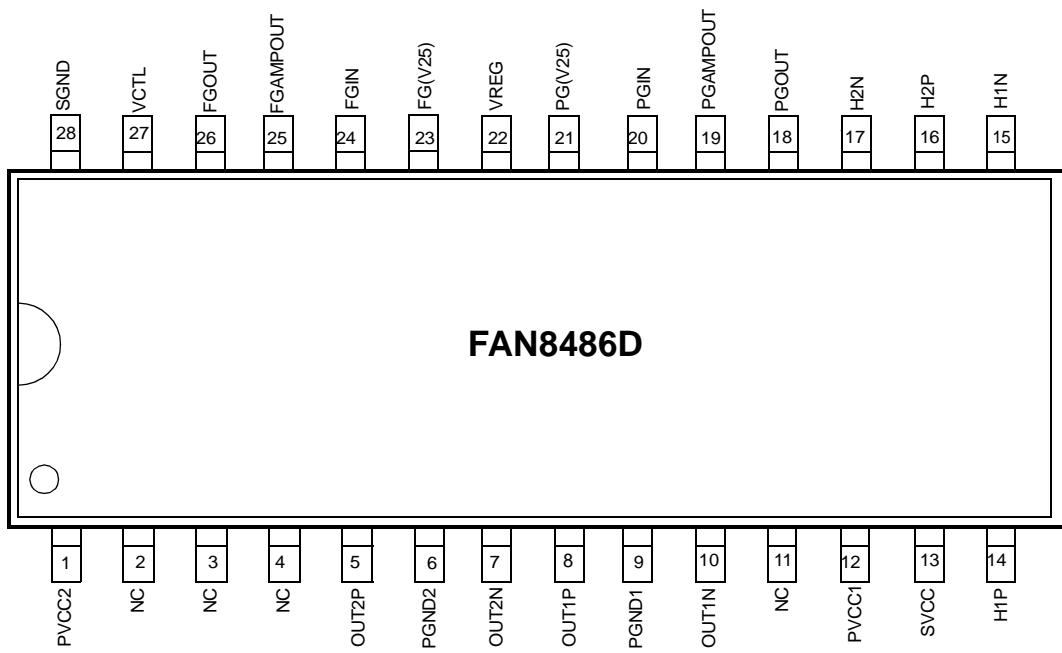

Typical Applications

- Video cassette recorder (VCR) cylinder (drum) motor
- Other 2-phase BLDC motor

Ordering Information

Device	Package	Operating Temp.
FAN8486D	28-SSOP-300SG	-25°C ~ +75°C
FAN8486DTF	28-SSOP-300SG	-25°C ~ +75°C

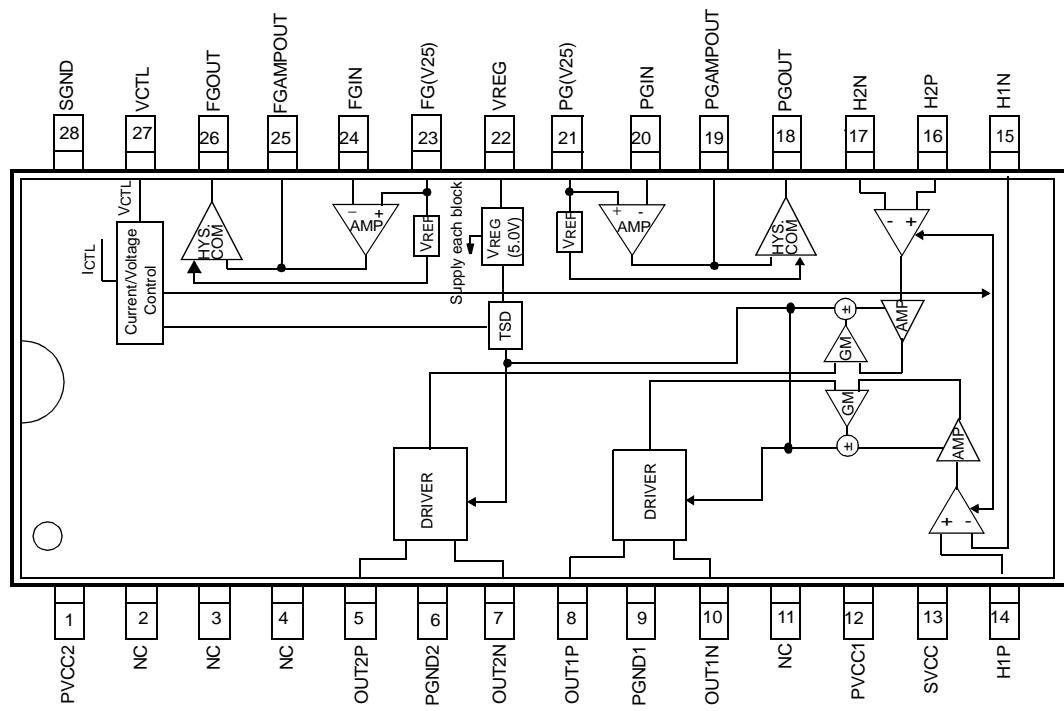

Pin Assignments

Pin Definitions

Pine Number	Pin Name	I/O	Pin Function Description
1	PVCC2	-	Power supply voltage2
2	NC	-	-
3	NC	-	-
4	NC	-	-
5	OUT2P	O	Output drive 2(P)
6	PGND2	O	Power ground 2
7	OUT2N	O	Output drive 2(N)
8	OUT1P	O	Output drive 1(P)
9	PGND1	O	Power ground 1
10	OUT1N	-	Output drive 1(N)
11	NC	-	-
12	PVCC1	-	Power supply voltage1
13	SVCC	-	Signal supply voltage
14	H1P	I	Hall signal input 1P
15	H1N	I	Hall signal input 1N
16	H2P	I	Hall signal input 2P
17	H2N	I	Hall signal input 2N
18	PGOUT	O	Phase generate output
19	PGAMPOUT	O	Phase generate amp. output
20	PGIN	I	Phase generate input
21	PG(V25)	-	Reference voltage for PG
22	VREG	-	Regulated voltage
23	FG(V25)	-	Reference voltage for FG
24	FGIN	I	Frequency generate input
25	FGAMPOUT	O	Frequency generate amp. output
26	FGOUT	O	Frequency generate output
27	VCTL	I	Voltage control(motor speed control)
28	SGND	-	Signal ground

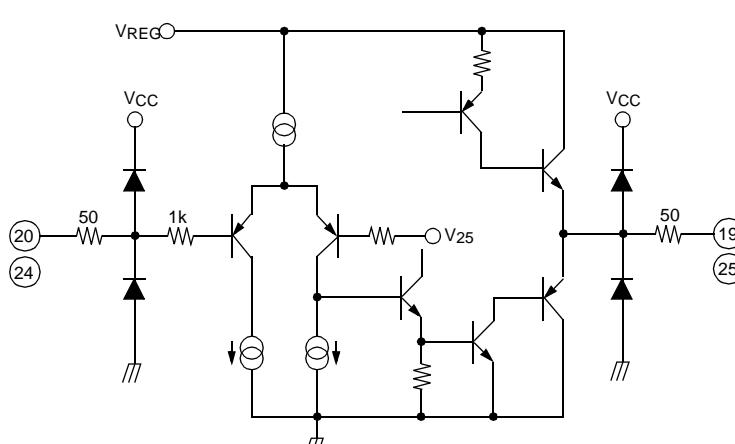

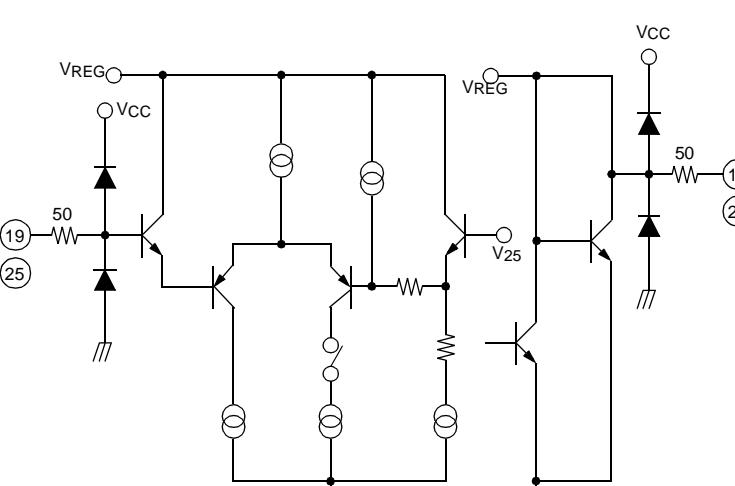

Internal Block Diagram

Equivalent Circuits

Description	Pin No.	Internal circuit
VCTL	27	<p>The diagram shows a voltage-controlled voltage source (VCS) for the VCTL pin. Pin 27 is connected to ground through a 50Ω resistor. A 1kΩ resistor connects pin 27 to the internal VREGO node. The VREGO node is connected to the base of a transistor stage, which provides the control current ICTL.</p>
Motor output	5,7,8,10	<p>The diagram shows a four-phase H-bridge driver for the motor. It consists of four transistors (one NPN and one PNP) per phase, connected in an H-bridge configuration. The phases are labeled 5, 8, 7, and 10. The common-emitter connection of the bridge is connected to the VCC rail.</p>
Hall input	14,15,16,17	<p>The diagram shows the Hall effect sensor interface. It includes a VREGO node, a 50Ω resistor from pin 14 to ground, a 500Ω resistor from pin 16 to the VCC rail, and a 50Ω resistor from pin 15 to the VCC rail. The VCC rail is also connected to the base of a transistor stage, which provides the control current ICTL.</p>

Equivalent Circuits (Continued)

Description	Pin No.	Internal circuit
PG, FG amplifier	19,20 24,25	
PG, FG hysteresis amplifier	18,19,25,26	

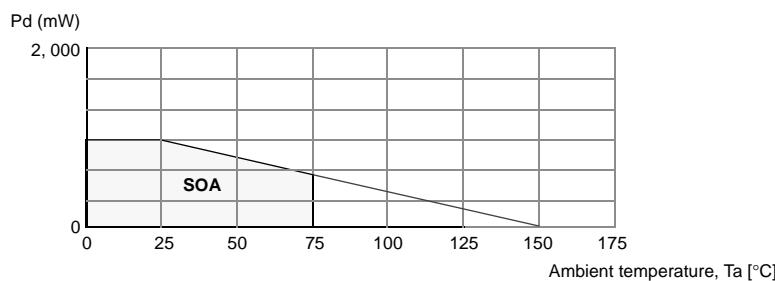

Absolute Maximum Ratings (Ta=25°C)

Parameter	Symbol	Value	Unit	Remark
Supply voltage	V _{CCmax}	18	V	-
Maximum output current	I _{Omax}	1.0 note1	A	-
V _{REG} output current	I _{REGmax}	30	mA	-
Power dissipation	P _d	1 note2	W	No heat sink
Operating temperature	T _{OPR}	-25 ~ +75	°C	-
Storage temperature	T _{STG}	-45 ~ +125	°C	-

Notes:

1. Duty 1 / 100, pulse width 500μs
2. 1) When mounted on glass epoxy PCB (76.2 × 114 × 1.57mm)
2) Power dissipation reduces 8.0mW / °C for using above Ta=25°C. (Without heat-sink)
3) Do not exceed P_d and SOA(Safe Operating Area).

Power Dissipation Curve

Recommended Operating Conditions (Ta=25°C)

Parameter	Symbol	Min.	Typ.	Max	Unit
Operating supply voltage	V _{CC}	8	12	16	V

Electrical Characteristics

(Ta=25°C, VCC=12V, unless otherwise specified)

Parameter	Symbol	Condition	Min.	Typ.	Max.	Unit
FULL CIRCUIT

Output pull-up resistance	V _{BHYS}	-	7.0	10	13	kΩ

NOTE:

The note in the chart means items calculated and approved in design not the items proven by actual test result.

Application Informations

1. A Diagram Summarizing The Entire System

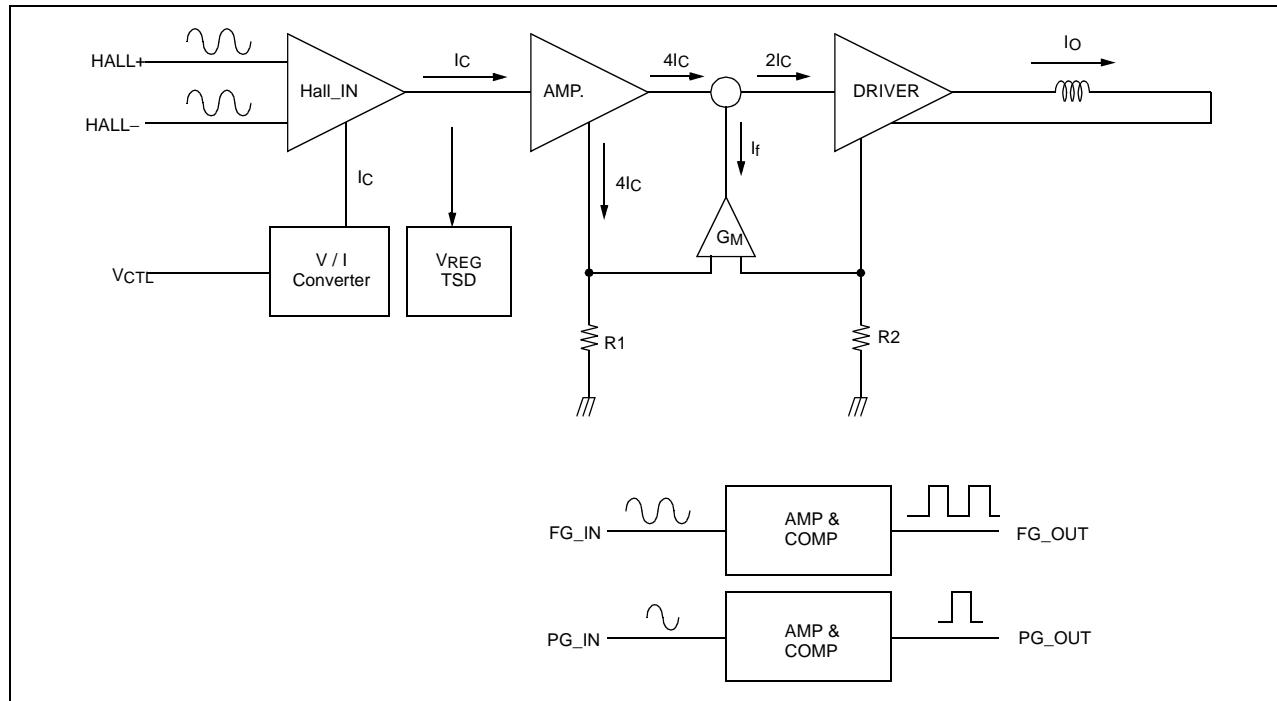

Figure 1.

Figure 1 is a conceptual diagram of the FAN8486D. It turns on or off depending on the signal of the hall sensor used for sensing the rotor position of motor.

The AMP, GM (Feedback) and output blocks are circuits used to determine current gain of FAN8486D.

Furthermore, HallIN represents the hall signal switch.

It supplies stable bias to each VREG block. The TSD block is a thermal shutdown circuit that protects the IC during an high temperature inside the IC.

Moreover, FG. and PG. blocks output individual signals generated in the motor using the amplifier and comparator.

These signals transmit motor speed and position data to controller of external servo etc. for their control.

2. Current Control

Figure 2 simplifies figure 1.

The supplied IO current drives the motor and the Ic current controls the motor speed.

Figure 3 is a graph of ICTL vs. IO.

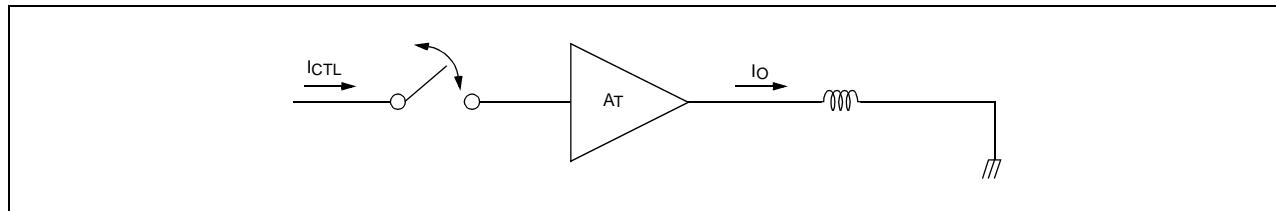

Figure 2.

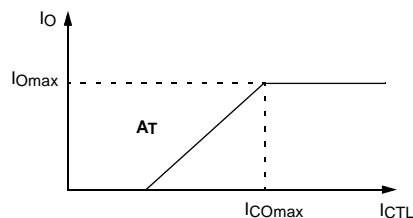

Figure 3.

3. Voltage Control

Even though FAN8486D command uses I_c to control the magnitude of I_O , it can also use voltage. FAN8486D mainly uses voltage control and has option to use current control.

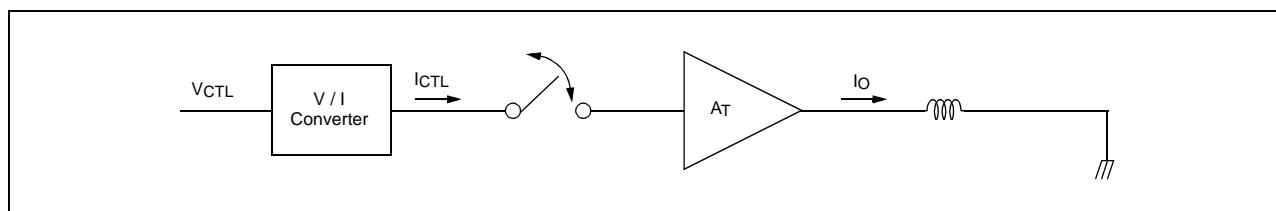

Figure 4.

Figure 4 shows the principle of the voltage control.

The V_{CTL} is the motor speed control voltage, and the I_{CTL} is converted to current through the V / I converter.

Figure 5 shows the graph of V_{CTL} vs. I_O .

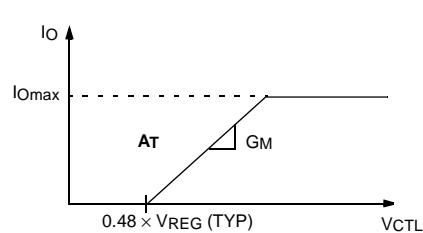

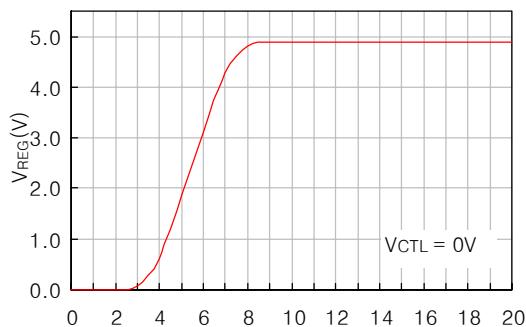

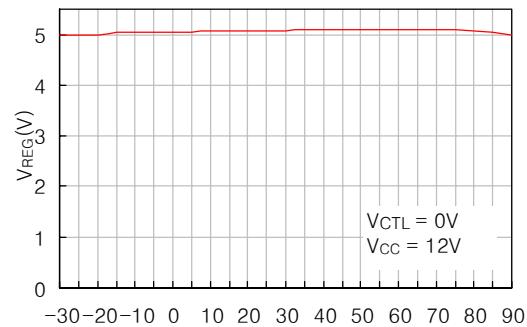

Figure 5.

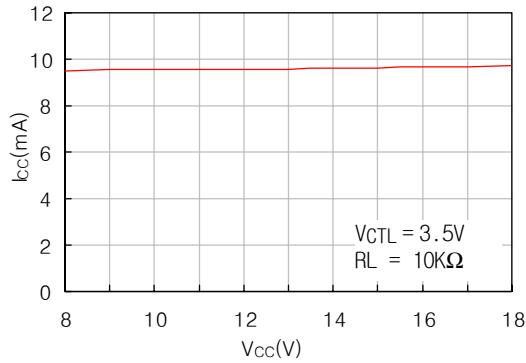

Typical Performance Characteristics

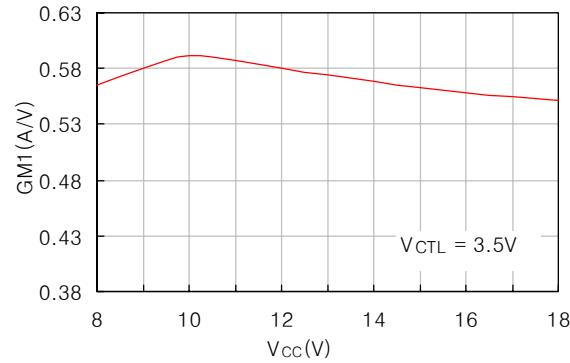

1.VCC vs VREG

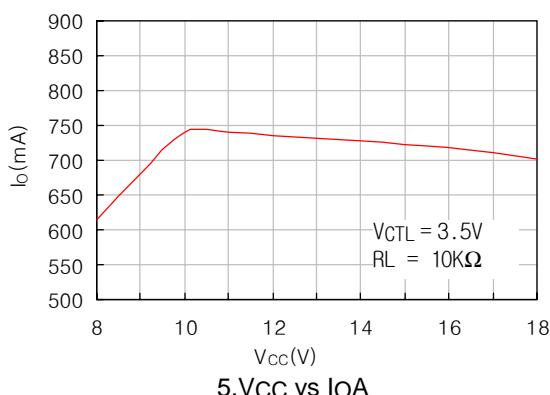

2.Temp. vs VREG

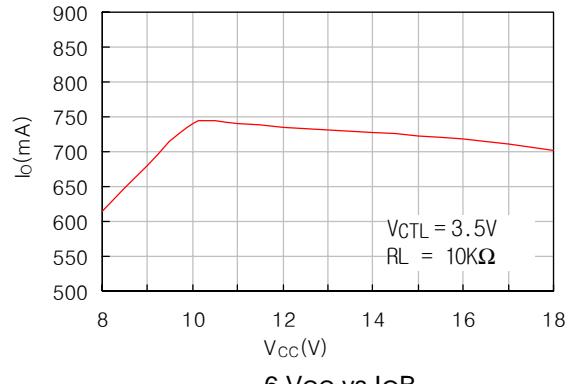

3.VCC vs Icc

4.VCC vs GM1

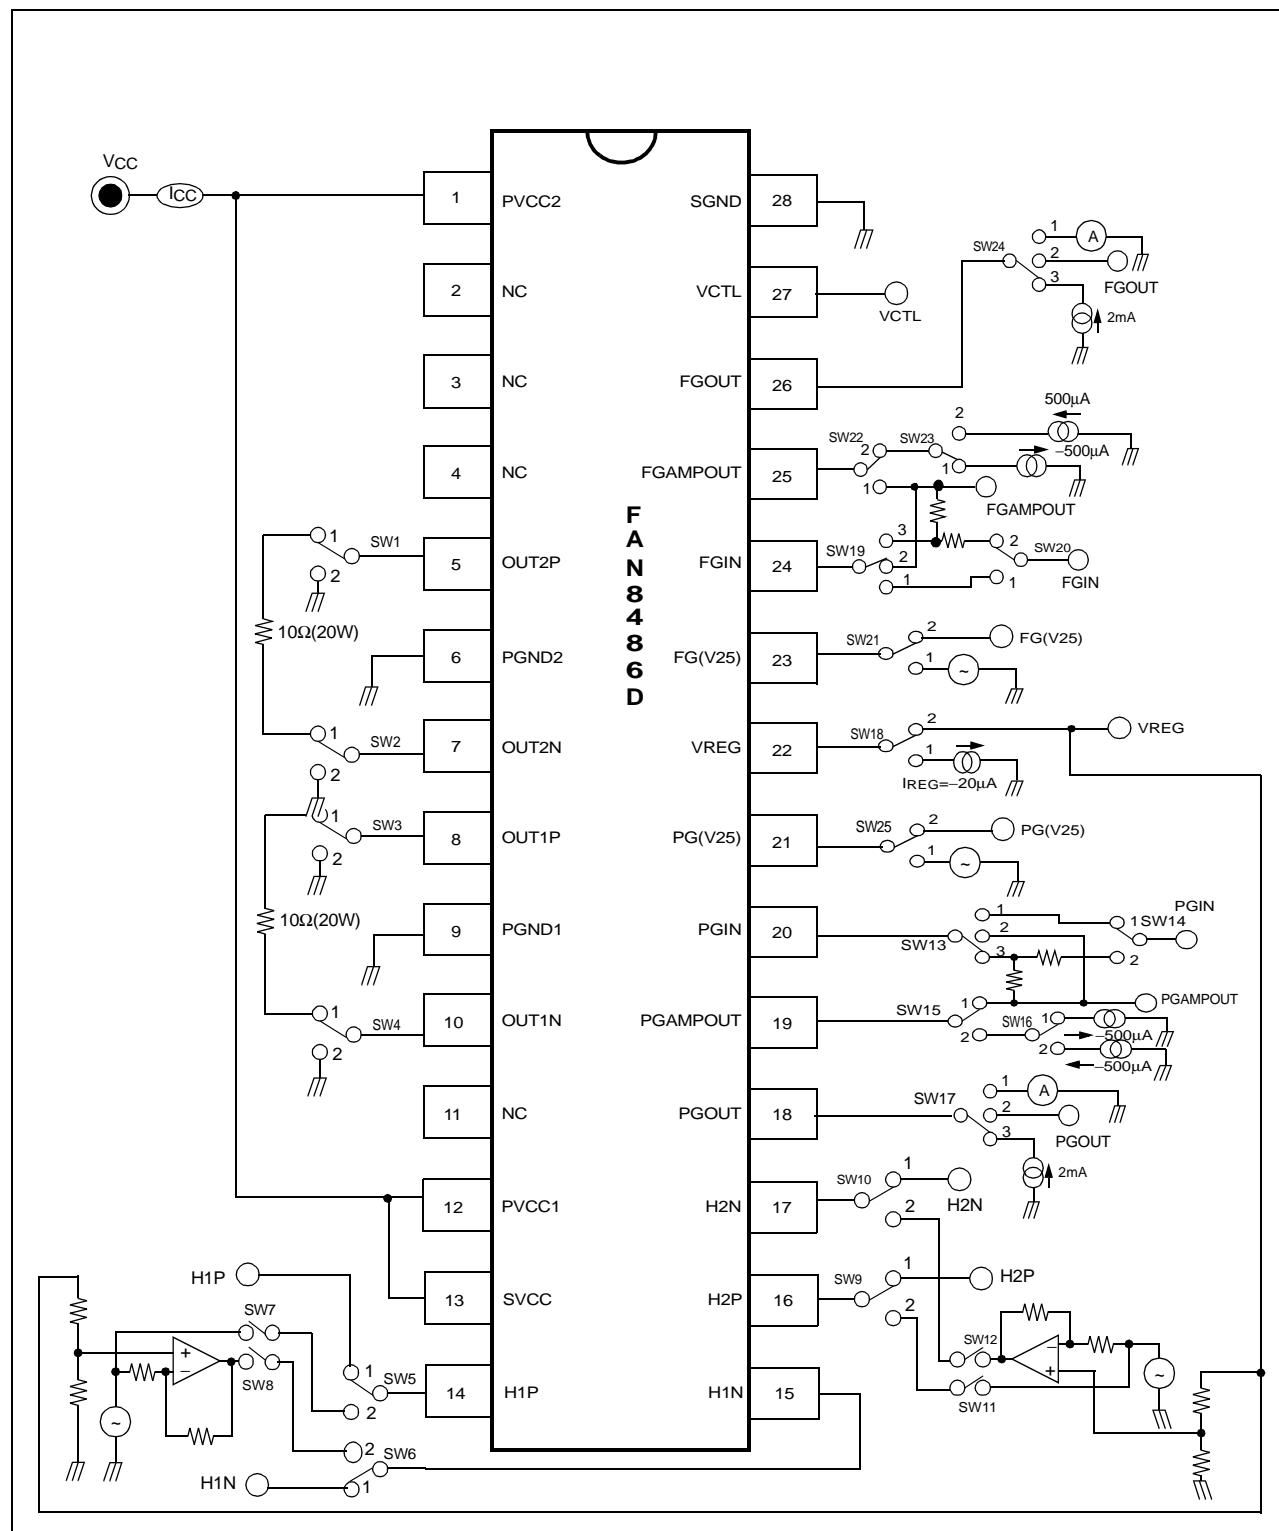

5.VCC vs IoA

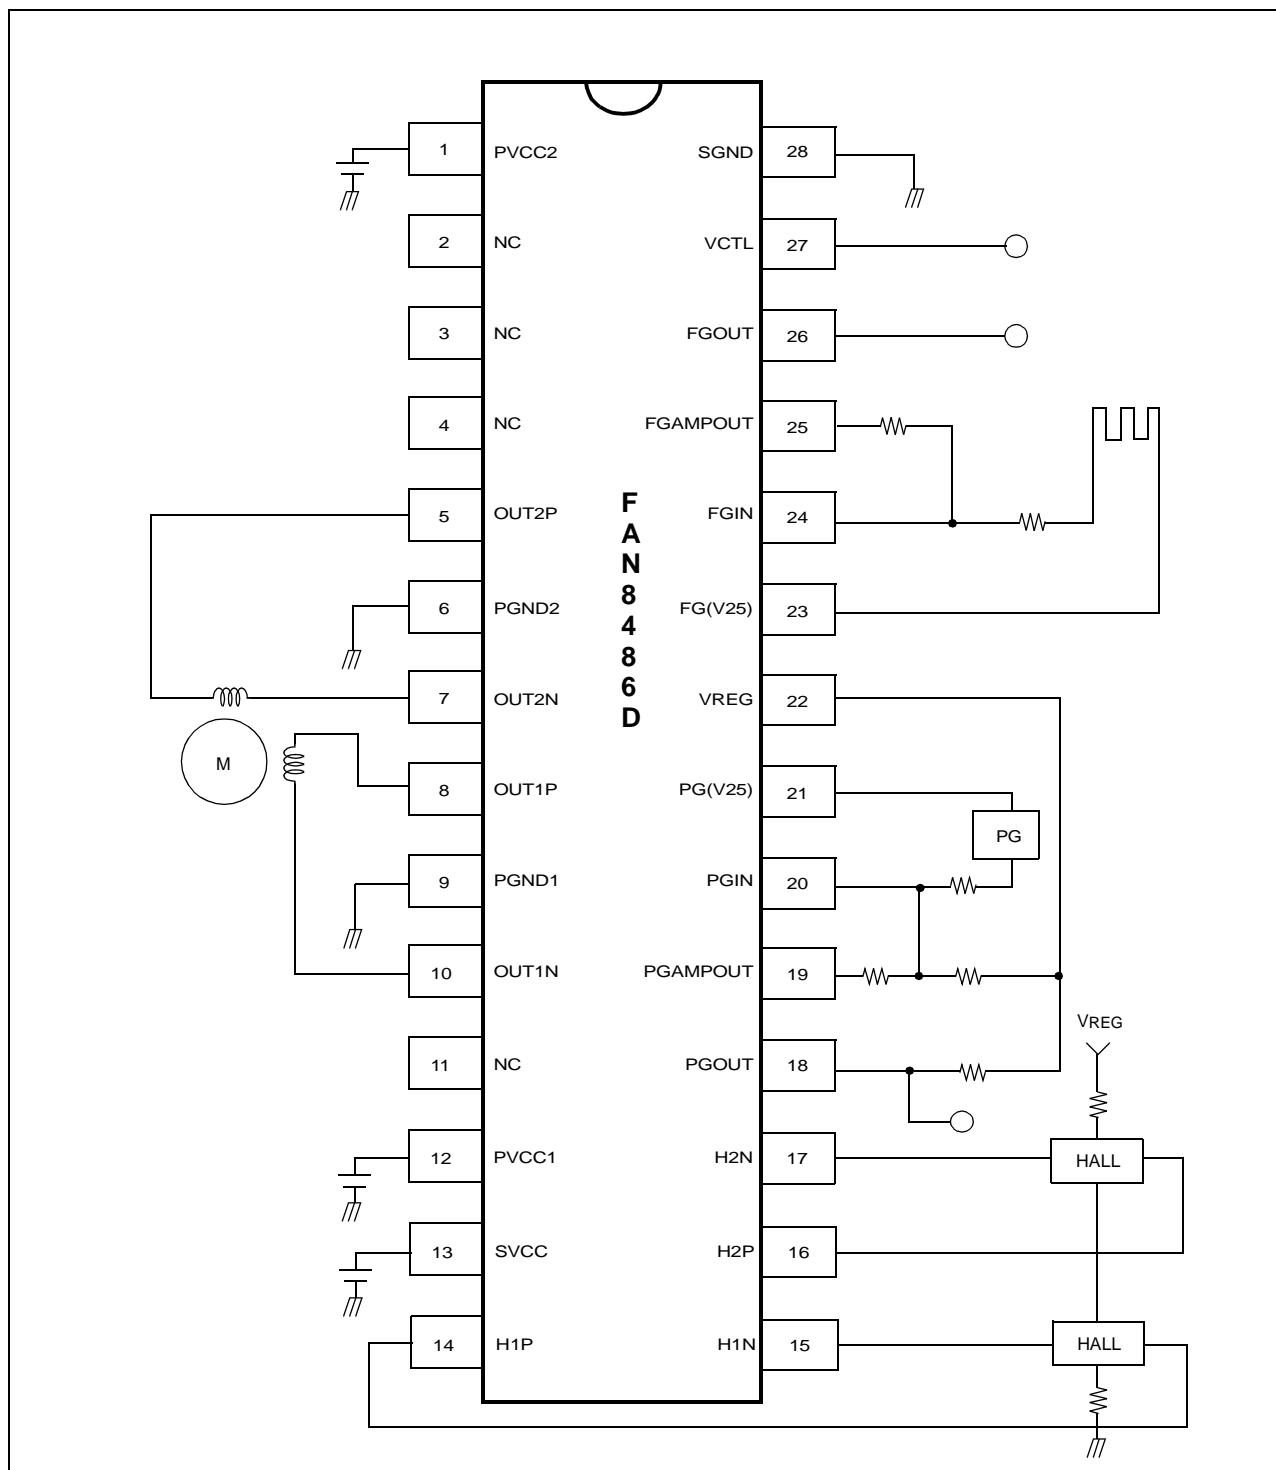

6.VCC vs IoB
