Volyage Detector IC Panasonic

# MN13821S

## CMOS IC for Voltage Detection

#### Overview

The MN13821S are elements that monitor the power supply voltage supplied to microcomputers and other LSI systems and issue reset signals for initializing the system after the power is first applied or for preventing runaway operation when the supply voltage fluctuates.

This is a N-channed open drain output, choose the ideal element for your application from the series' wide selection of detection ranks (17 ranks 2.0 V to 4.9 V).

There is other output type, CMOS output (MN1382S) and inverted CMOS output (MN13822S).

#### ■ Features

- Three-pin element requiring no adjustment
- Wide selection of detection ranks (17 ranks 2.0 V to 4.9 V)
- Highly precise detection voltage
- Detection voltage with hysteresis characteristic

 $\Delta VD = 50 \text{ mV}$  for ranks C to K

 $\Delta VD = 100 \text{ mV}$  for ranks L to U

- Low current consumption:  $I_{DD} = 1 \mu A \text{ (typ.)}$  for  $V_{DD} = 5 \text{ V}$
- Low fluctuation in detection voltage with tempera-ture (1 mV/°C (typ.))

#### Applications

- · Battery checkers
- Power outage detectors
- · Level discriminators
- Memory backup systems
- Microcomputer reset circuits
- Reset circuits for other electronic circuits

## ■ Block Diagram

SAG00007AED

Note) \*1: Circuits vary slightly depending on the output type (CMOS output, N-channel open drain output, or inverted CMOSoutput)

#### ■ Package

• Code

MINI-3DC

Pin name

1: Out Reset signal output pin

2: V<sub>SS</sub> Ground pin

3: V<sub>DD</sub> Power supply pin

Note) Rank symbol will be marked on the package in the □ area.

Publication date: November 2007

## ■ Detection Ranks (on Voltage)

| Rank | Detection Voltage for Drop in | Power Supply Voltage V <sub>DL</sub> | Linit | Detection Voltage Hy | Linit |      |
|------|-------------------------------|--------------------------------------|-------|----------------------|-------|------|
|      | Min                           | Max                                  | Unit  | Min                  | max   | Unit |
| С    | 2.0                           | 2.2                                  |       |                      |       |      |
| D    | 2.1                           | 2.3                                  |       |                      |       |      |
| Е    | 2.2                           | 2.4                                  |       |                      |       |      |
| F    | 2.3                           | 2.5                                  |       | 50                   |       |      |
| G    | 2.4                           | 2.6                                  |       | 50                   |       |      |
| Н    | 2.5                           | 2.7                                  |       |                      |       |      |
| J    | 2.6                           | 2.9                                  |       |                      | 300   | mV   |
| K    | 2.8                           | 3.1                                  |       |                      |       |      |
| L    | 3.0                           | 3.3                                  | V     |                      |       |      |
| M    | 3.2                           | 3.5                                  |       |                      |       |      |
| N    | 3.4                           | 3.7                                  |       |                      |       |      |
| P    | 3.6                           | 3.9                                  |       |                      |       |      |
| Q    | 3.8                           | 4.1                                  |       | 100                  |       |      |
| R    | 4.0                           | 4.3                                  |       |                      |       |      |
| S    | 4.2                           | 4.5                                  |       |                      |       |      |
| T    | 4.4                           | 4.7                                  | 1     |                      |       |      |
| U    | 4.6                           | 4.9                                  |       |                      |       |      |

## ■ Absolute Maximum Ratings $V_{SS} = 0 \text{ V}, T_a = 25 ^{\circ}\text{C}$

| Parameter                     | Symbol           | Rating                   | Unit |
|-------------------------------|------------------|--------------------------|------|
| Power supply voltage          | $V_{DD}$         | 7.0                      | V    |
| Output voltage                | $V_{O}$          | $-0.3$ to $V_{DD} + 0.3$ | V    |
| Operating ambient temperature | T <sub>opr</sub> | -20 to +70               | °C   |
| Storage temperature           | T <sub>stg</sub> | -55 to +125              | °C   |

## $\blacksquare$ Recommended Operating Conditions $V_{SS} = 0 \text{ V}, T_a = 25^{\circ}\text{C}$

| Parameter            | Symbol   | Conditions          | Min | Тур | Max | Unit |
|----------------------|----------|---------------------|-----|-----|-----|------|
| Power supply voltage | $V_{DD}$ | See Figures 1 and 4 | 1.5 |     | 6.0 | V    |

## ■ Application Circuit Example

Note) Connect resistors, capacitors, and the like only to the output pin on the MN13821S element.

Note that connect-ing them to the power source pins changes  $V_{\mathrm{DH}}$ ,  $V_{\mathrm{DL}}$ , and  $\Delta VD$ . Select the values of R and C to match the application.

## ■ Electrical Characteristics

## • DC Characteristics $V_{SS} = 0 \text{ V}$ , $T_a = -20^{\circ}\text{C}$ to $+70^{\circ}\text{C}$

| Parameter  | Symbol          | Conditions  | Min                                | Тур | Max | Unit |
|--|-----------------|---|------------------------------------|-----|-----|------|
| Power supply current                               | $I_{DD}$        | $V_{DD} = 5 \text{ V}^*$ , Load resistor $10 \text{ k}\Omega$ |                                    | 1   | 5   | μΑ   |
| Detection voltage for drop in power supply voltage | $V_{ m DL}$     | $T_a = 25$ °C   | For particulars, see the detection |     |     | V    |
| Detection voltage hysteresis width                 | ΔVD             | See Figures 1 and 4   | voltage rank table.                |     |     | mV   |
| Low level output voitage                           | V <sub>OL</sub> | $V_{DD} = 1.8 \text{ V}, I_{OH} = 0.7 \text{ mA}$             | V <sub>SS</sub>                    |     | 0.4 | V    |

Note) \*: This includes the output pin's leakage current.

## • AC Characteristics $V_{SS} = 0 \text{ V}, T_a = 25 ^{\circ}\text{C}$

| Parameter          | Symbol  | Conditions          |      | Allowable Value (typ) | Unit |
|--------------------|---|---------------------|------|-----------------------|------|
| Parameter          | Symbol  |                     | Rank | Allowable value (typ) | Unit |
|                    |   |                     | С    |                       |      |
|                    |   |                     | D    | 2.5                   |      |

#### ■ Reference Data

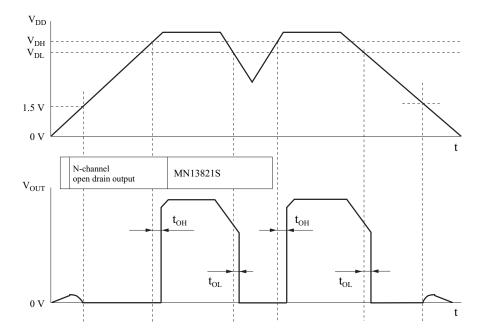

Figure 1. Description of Operation

Note) 1. Output cannot be specified for power supply voltages under 1.5 V because operation is not guaranteed for that range.

2.  $V_{DL}$  : Detection voltage for drop in power supply voltage

 $\ensuremath{V_{DH}}$  : Detection voltage for rise in power supply voltage

 $t_{OL}$ : Time lag between the time that the power supply voltage reaches the detection voltage ( $V_{DL}$  or  $V_{DH}$ ) and the time that theoutput pin (OUT) goes to Low level.

 $t_{OH}$ : Time lag between the time that the power supply voltage reaches the detection voltage ( $V_{DL}$  or  $V_{DH}$ ) and the time that theoutput pin (OUT) goes to High level.

3. These characteristics for the N-channel open drain output are when a load resistor is connected between the OUT and  $V_{DD}$  pins

# Request for your special attention and precautions in using the technical information and semiconductors described in this book

- (1) If any of the products or technical information described in this book is to be exported or provided to non-residents, the laws and regulations of the exporting country, especially, those with regard to security export control, must be observed.
- (2) The technical information described in this book is intended only to show the main characteristics and application circuit examples of the products, and no license is granted under any intellectual property right or other right owned by our company or any other company. Therefore, no responsibility is assumed by our company as to the infringement upon any such right owned by any other company which may arise as a result of the use of technical information described in this book.
- (3) The products described in this book are intended to be used for standard applications or general electronic equipment (such as office equipment, communications equipment, measuring instruments and household appliances).
  Consult our sales staff in advance for information on the following applications:
  - Special applications (such as for airplanes, aerospace, automobiles, traffic control equipment, combustion equipment, life support systems and safety devices) in which exceptional quality and reliability are required, or if the failure or malfunction of the products may directly jeopardize life or harm the human body.
  - · Any applications other than the standard applications intended.
- (4) The products and product specifications described in this book are subject to change without notice for modification and/or improvement. At the final stage of your design, purchasing, or use of the products, therefore, ask for the most up-to-date Product Standards in advance to make sure that the latest specifications satisfy your requirements.
- (5) When designing your equipment, comply with the range of absolute maximum rating and the guaranteed operating conditions (operating power supply voltage and operating environment etc.). Especially, please be careful not to exceed the range of absolute maximum rating on the transient state, such as power-on, power-off and mode-switching. Otherwise, we will not be liable for any defect which may arise later in your equipment.
  - Even when the products are used within the guaranteed values, take into the consideration of incidence of break down and failure mode, possible to occur to semiconductor products. Measures on the systems such as redundant design, arresting the spread of fire or preventing glitch are recommended in order to prevent physical injury, fire, social damages, for example, by using the products.
- (6) Comply with the instructions for use in order to prevent breakdown and characteristics change due to external factors (ESD, EOS, thermal stress and mechanical stress) at the time of handling, mounting or at customer's process. When using products for which damp-proof packing is required, satisfy the conditions, such as shelf life and the elapsed time since first opening the packages.
- (7) This book may be not reprinted or reproduced whether wholly or partially, without the prior written permission of Matsushita Electric Industrial Co., Ltd.
