Testing Configurations

Input reflected-ripple current measurement

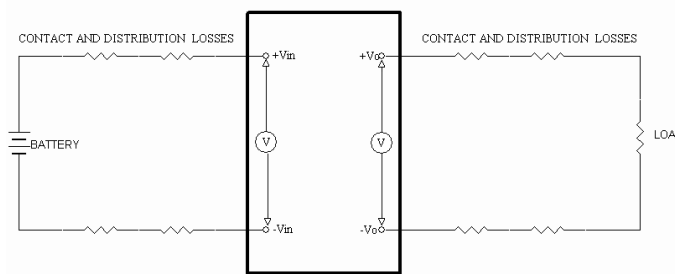

Component	Value	Voltage	Reference
L	12µH	---	---
C1	10µF	100V	Aluminum Electrolytic Capacitor
C2	10µF	100V	Aluminum Electrolytic Capacitor

Peak-to-peak output ripple & noise measurement

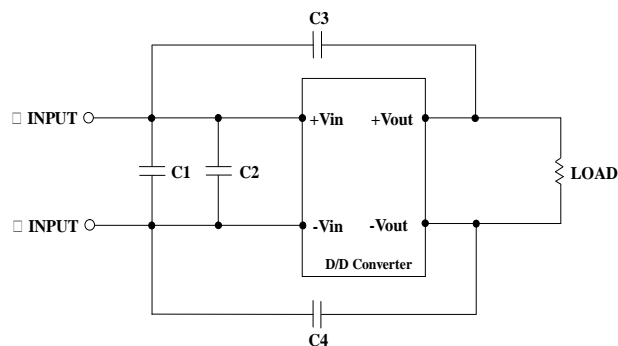

Output voltage and efficiency measurement

Note: All measurements are taken at the module terminals.

$$\text{Efficiency} = \left(\frac{V_o \times I_o}{V_{in} \times I_{in}} \right) \times 100\%$$

EMC considerations

Suggested schematic for EN55022 conducted emission Class A limits

Recommended layout with input filter

To meet conducted emissions EN55022 CLASS A, the following components are needed:

PXB15-24WSXX

Component	Value	Voltage	Reference
C1	6.8uF	50V	1812 MLCC
C2	6.8uF	50V	1812 MLCC
C3,C4	470pF	2KV	1808 MLCC

PXB15-48WSXX

Component	Value	Voltage	Reference
C1	2.2uF	100V	1812 MLCC
C2	2.2uF	100V	1812 MLCC
C3,C4	470pF	2KV	1808 MLCC

EMC considerations (Continued)

Suggested schematic for EN55022 conducted emission Class B limits

Recommended layout with input filter

To meet conducted emissions EN55022 CLASS B, the following components are needed:

PXB15-24WSXX

Component	Value	Voltage	Reference
C1,C3	6.8 μ F	50V	1812 MLCC
C2	---	---	---
C4,C5	470pF	2KV	1808 MLCC
L1	325 μ H	---	Common Choke

PXB15-48WSXX

Component	Value	Voltage	Reference
C1,C3	2.2 μ F	100V	1812 MLCC
C2	2.2 μ F	100V	1812 MLCC
C4,C5	1000pF	2KV	1808 MLCC
L1	325 μ H	---	Common Choke

EMC considerations (Continued)

This Common Choke L1 is defined as follow:

- L: $325\mu\text{H}\pm 35\%$ / DCR: 35Ω , max
A height: 8.8 mm, Max
- Test condition: 100KHz / 100mV
- Recommended through hole: $\Phi 0.8\text{mm}$
- All dimensions in millimeters

Input Source Impedance

The power module should be connected to a low impedance input source. Highly inductive source impedance can affect the stability of the power module. The addition of an external C-L-C filter is recommended to minimize input reflected ripple current. The inductor is simulated source impedance of $12\mu\text{H}$ and capacitor is Nippon chemi-con KZE series $10\mu\text{F}/100\text{V}$ & $10\mu\text{F}/100\text{V}$. The capacitor must be located as close as possible to the input terminals of the power module for lower impedance.

Output Over Current Protection

When excessive output currents occur in the system, circuit protection is required on all power supplies. Normally, overload current is maintained at approximately 150 percent of rated current for PXB15W single output series.

Hiccup-mode is a method of operation in a power supply whose purpose is to protect the power supply from being damaged during an over-current fault condition. It also allows the power supply to restart when the fault is removed.

One of the problems resulting from over current is that excessive heat may be generated in power devices; especially MOSFET and Schottky diodes and the temperature of those devices may exceed their specified limits. A protection mechanism has to be used to prevent those power devices from being damaged.

Output Over Voltage Protection

The output over-voltage protection consists of a Zener diode that monitors the output voltage on the feedback loop. If the voltage on the output terminals exceeds the over-voltage protection threshold, then the Zener diode will send a signal to the control IC to limit the output voltage.

Output Voltage Adjustment

Output voltage set point adjustment allows the user to increase or decrease the output voltage set point of a module. This is accomplished by connecting an external resistor between the TRIM pin and either the Vo (+) or Vo (-) pins. With an external resistor between the TRIM and Vo (-) pin, the output voltage set point increases. With an external resistor between the TRIM and Vo (+) pin, the output voltage set point decreases.

- Trim up equation

$$R_U = \left[\frac{G \times L}{(V_{O,up} - L - K)} - H \right] \Omega$$

- Trim down equation

$$R_D = \left[\frac{(V_{O,down} - L) \times G}{(V_O - V_{O,down})} - H \right] \Omega$$

- Trim constants

Short Circuit Protection

Continuous, hiccup and auto-recovery mode.

During a short circuit condition the converter will shut down. The average current during this condition will be very low and damage to this device should not occur.

Thermal Consideration

The power module operates in a variety of thermal environments. However, sufficient cooling should be provided to help ensure reliable operation of the unit. Heat is removed by conduction, convection, and radiation to the surrounding Environment. Proper cooling can be verified by measuring the point as shown in the figure below. The temperature at this location should not exceed 105 °C. When Operating, adequate cooling must be provided to maintain the test point temperature at or below 105 °C. Although the maximum point Temperature of the power modules is 105 °C, maintaining a lower operating temperature will increase the reliability of this device.

Heat Sink Consideration

The addition of a heat sink may be needed to decrease the temperature of the module; thus increasing its reliability.

Remote ON/OFF Control

The Remote ON/OFF Pin is used to turn the DC/DC power module on and off. The user must connect a switch between the on/off pin and the Vi (-) pin. The switch can be an open collector transistor, FET, or Photo-Coupler. The switch must be capable of sinking up to 1 mA when using a low logic level voltage. When using a high logic level, the maximum signal voltage is 15V and the maximum allowable leakage current of the switch is 50 uA.

Remote ON/OFF Implementation Circuits

Isolated-Closure Remote ON/OFF

Level Control Using TTL Output

Level Control Using Line Voltage

There are two remote control options available, positive logic and negative logic.

a. Positive logic - The DC/DC module is turned on when the ON/OFF pin is at a high logic level. A low logic signal is needed to turn off the device.

Low logic level

When PXB15W module is turned on at High logic level

b. Negative logic - The DC/DC module is turned on when the ON/OFF pin is at low logic level. A high logic level signal is needed to turn off the device.

Low logic level

When PXB15W module is turned off at High logic level

Bottom View Dimensions:
 - Total width: 1.00 (25.4)
 - Pin 1 to Pin 2 distance: 0.800 (20.32)
 - Pin 1 to Pin 3 distance: 0.10 (2.5)
 - Pin 1 to Pin 4 distance: 0.100 (2.54)
 - Pin 1 to Pin 5 distance: 0.200 (5.08)
 - Pin 1 to Pin 6 distance: 0.50 (12.7)
 - Pin 4 to Pin 5 distance: 0.400 (10.16)
 - Pin 5 to Pin 6 distance: 0.400 (10.16)

PIN CONNECTION

PIN	PXB15WS Series
1	+ INPUT
2	- INPUT
3	ON/OFF
4	+VOUT
5	TRIM
6	-VOUT

OPTIONS

Suffix	Descriptions
P	Positive Logic
N	Negative Logic
T	Trim

- All dimensions in Inches (mm)
Tolerance: X.XX±0.02 (X.X±0.5)
X.XXX±0.01 (X.XX±0.25)
- Pin pitch tolerance ±0.01 (0.25)
- Pin dimension tolerance ±0.004 (0.1)

EXTERNAL OUTPUT TRIMMING

Output can be externally trimmed by using the method shown below.

TRIM UP

TRIM DOWN

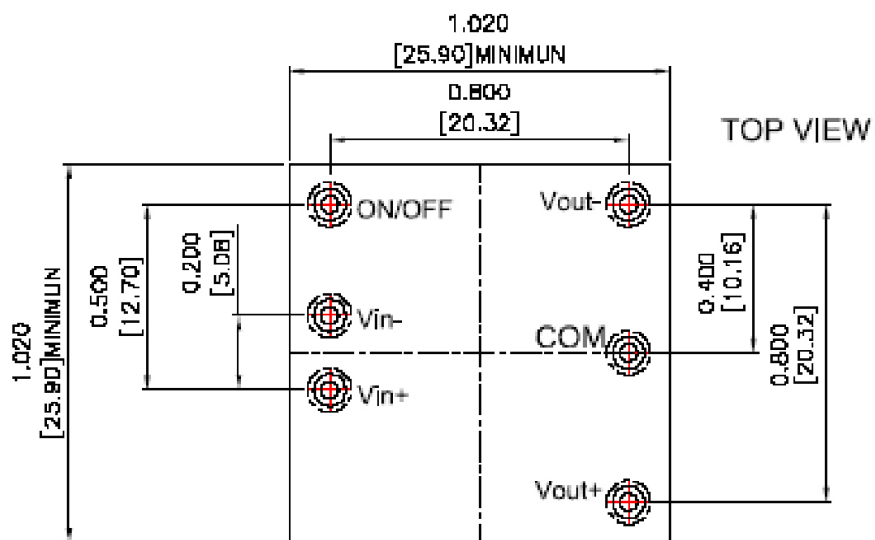

-NT as standard. Delete suffix if not required.

Recommended Pad Layout

Recommended Pad Layout

ALL Dimensions in inches (millimeters)

Tolerances:xx.xxx in ± 0.010 in (xx.xx mm ± 0.25 mm)

PAD SIZE (LEAD FREE RECOMMENDED)

PIN THROUGH HOLE: ϕ 0.047in(1.2mm)

TOP VIEW PAD: ϕ 0.079in(2.0mm)

BOTTOM VIEW PAD: ϕ 0.118in(3.0mm)

Soldering Considerations

Lead free wave solder profile for PXB15W-SERIES

Zone	Reference Parameter.
Preheat zone	Rise temp. speed: 3 °C /sec max. Preheat temp.: 100~130 °C
Actual heating	Peak temp.: 250~260 °C Peak time(T1+T2 time): 4~6 sec

Reference Solder: Sn-Ag-Cu; Sn-Cu

Hand Welding: Soldering iron: Power 90W

Welding Time: 2~4 sec

Temp.: 380~400 °C

Packaging Information

All dimensions in millimeters

10 PCS per TUBE

Part Number Structure

PXB 15 - 24W S 05 -A

Total Output power
15 Watt

Option Suffix

Input Voltage Range
24xxx : 9-36V
48xxx : 18-75V

Single Output

Output Voltage
3P3 : 3.3V
05 : 5V

Model Number	Input Range	Output Voltage	Output Current	Input Current	Eff ⁽²⁾ (%)
			Full Load	Full Load ⁽¹⁾	
PXB15-24WS3P3	9 - 36 VDC	3.3 VDC	4000mA	688mA	86
PXB15-24WS05	9 - 36 VDC	5 VDC	3000mA	762mA	86
PXB15-24WS12	9 - 36 VDC	12 VDC	1300mA	783mA	87
PXB15-24WS15	9 - 36 VDC	15 VDC	1000mA	753mA	87
PXB15-48WS3P3	18 - 75 VDC	3.3 VDC	4000mA	336mA	86
PXB15-48WS05	18 - 75 VDC	5 VDC	3000mA	382mA	86
PXB15-48WS12	18 - 75 VDC	12 VDC	1300mA	392mA	87
PXB15-48WS15	18 - 75 VDC	15 VDC	1000mA	377mA	87

Note 1. Maximum value at nominal input voltage and full load.
Note 2. Typical value at nominal input voltage and full load.

Safety and Installation Instruction

Fusing Consideration

Caution: This power module is not internally fused. An input line fuse must always be used.

This encapsulated power module can be used in a wide variety of applications, ranging from simple stand-alone operation to an integrated part of sophisticated power architecture. For maximum flexibility, internal fusing is not included; however, to achieve maximum safety and system protection, always use an input line fuse. The safety agencies require a normal-blow fuse with maximum rating of 3A for PXB15-24WSXX modules and 1.5A for PXB15-48WSXX modules. Based on the information provided in this data sheet on Inrush energy and maximum DC input current; the same type of fuse with lower rating can be used. Refer to the fuse manufacturer's data for further information.

MTBF and Reliability

The MTBF of PXB15WS SERIES of DC/DC converters has been calculated using

Bellcore TR-NWT-000332 Case I: 50% stress, Operating Temperature at 40 °C (Ground fixed and controlled environment). The resulting figure for MTBF is 1.330×10⁶ hours.

MIL-HDBK 217F NOTICE2 FULL LOAD, Operating Temperature at 25 °C .. The resulting figure for MTBF is 5.630×10⁵ hours.
