## austriamicrosystems

Telephone Line Interface and
Speakerphone Circuit
AS2522B

## Key Features

Line/Speech circuit, DTMF dialer, FSK transmitter and tone ringer on a 32-pin CMOS-IC
Enhanced voice switching
Background noise monitoring
DTMF tone generator
FSK Transmitter V.23, BELL202, V.21, BELL 103
Ringer tone programmable
Tx- and Rx-gain programmable
Digital volume control of $R x$ signals
DC characteristic programmable
Dual softclipping in handset mode
Tx-softclipping in handsfree mode
Common monitor amplifier for loudhearing, handsfree and ringing
Supply voltage generation for external circuitry
Automatic line loss compensation (LLC)
Real and complex impedance selectable by external components
Side tone adaptation selectable by external components Unique EMC performance
Operating range from 15 mA to 100 mA (down to 5 mA
with reduced performance)
Few external components

## General Description

AS2522 is a CMOS integrated circuit that incorporates DC and AC line adaptation (DC-mask and synthesized ACimpedance of $1000 \Omega$ ) as well as a speech circuit with softclipping, line loss compensation and Rx-volume control for handset and handsfree operation. It shall act as an a/bline powered device, which is controlled by a CPU via a serial interface. Furthermore the AS2522 incorporates a DTMF, FSK transmitter, single tone and ringer tone generator.

AS2522 allows to use an off-the-shelf microprocessor without special blocks and functions for telephone applications. DTMF, FSK transmitter, single tone and ringer tone generator can be controlled via the serial interface as well as the gain settings in handset and handsfree mode.

## Applications

Enhanced handsfree feature phones with CallerID and extended displays.

## Package

Available in 32 -pin TQFP

## Block Diagram

## Pin description

| Pin \# | Symbol | Function |
| :---: | :---: | :---: |
| 13 | LS | Line Current Sense Input <br> Analog input for sensing the line current |
| 10 | LI | Line Input <br> Analog input used for power extraction and line current sensing |
| 11 | RI | Receive Input <br> Analog input for ac-separated receive signal |
| 7 | STB | Side Tone Balance Input <br> Analog input for side tone cancellation network |
| 8 | CS | Current Shunt Control Output <br> N -channel open drain output to control the external high power shunt transistor for synthesizing AC- and DC-impedance, modulation of line voltage and shorting the line during make periods of pulse dialing |
| 14 | Cl | Complex Impedance Input <br> Analog input pin for the capacitor to program a complex impedance |
| 12 | SS | Supply Source Control Output <br> N-channel open drain output to control the external high power source transistor for supplying (Vpp) the loudspeaker amplifier in off-hook loudspeaking/handsfree mode |
| 9 | VSS | Voltage Source Source Negative Analog Power Supply |
| 18 | VDD | Voltage Drain Drain <br> Positive Analog Power Supply |
| 19 | AGND | Analog Ground <br> Special ground for the internal amplifiers |
| 6 | M1 | Microphone Input 1 <br> Differential input for the handset microphone (electret) |

Detailed Block Diagram

## Functional Description

## DC conditions

The normal operating mode is from 15 mA to 100 mA . An operating mode with reduced performance is from 5 mA to 15 mA . In the line hold range from 0 mA to 5 mA the device is in a power down mode.

The DC characteristic is determined by the voltage at LIpin and a $30 \Omega$ resistor between LI- and LS-pin. It can be calculated by the following equation: VLS = VLI + ILine * $30 \Omega$. VLI can be programmed to be 3.5 V or 4.5 V .

## $2 / 4$ wire conversion

AS2522 has a built-in dual Wheatstone bridge with one common ground. This provides a maximum of independence of AC-impedance and side tone from each other. One can adapt side tone without changing the ACimpedance.

## AC-impedance

The AC-impedance of AS2522 is set to t.m. $1000 \Omega$. With the external capacitor at Cl -pin it can be programmed complex. With an external resistor of approx. $1.5 \mathrm{k} \Omega$ connected to the LS-pin it can be programmed to $600 \Omega$.

## Side Tone

A good side tone cancellation can be achieved by using the following equation:
ZBAL/ZLINE = 10

## Transmit path

The gain of the M1/M2 $\rightarrow$ LS is set to +37 dB . This gain can be changed by programming from +30 dB to +45 dB in 1 dB steps (Register Txgain). The input is differential with an impedance of $10 \mathrm{k} \Omega$. The soft clip circuit limits the output voltage at LS to 2 V . There is LLC for this path.

The gain of the M3/M4 $\rightarrow$ LS is set to +46 dB .
This gain can be changed by programming from +39 dB to +54 dB in 1 dB steps. The input is differential with an impedance of $10 \mathrm{k} \Omega$. The soft clip circuit limits the output voltage at LS to 2 Vp . There is no LLC for this path.

## Receive path

The gain of the $L S \rightarrow R O$ receive path is set to $+1 d B$. This gain can be changed by programming from -6 dB to +9 dB in 1dB steps (Register Rxgain). The receive input is the differential signal of RI and STB. The soft clip circuit
limits the output voltage at RO to 1 Vp . It prevents harsh distortion and acoustic shock. There is LLC for this path.

The gain of the LS $\rightarrow$ LO1/LO2 receive path is set to +29 dB . This gain can be changed by programming from +22 dB to -37 dB in 1 dB steps. The user can also change the gain via Register VOL (See section "Handsfree"). The receive input is the differential signal of RI and STB. The soft clip circuit limits the output voltage at LO1 of LO2 to 1 Vp . It prevents harsh distortion and acoustic shock. There is optional LLC for this path.

## Line Loss Compensation

The line loss compensation is programmable (Register $0 \times 0 \mathrm{C}$ ). When it is activated, the transmit and receive gains for both I/O's are decreased by 6 dB at line currents from 20 mA to 50 mA or from 45 mA to 75 mA .

## Handsfree

The handsfree function allows voice communication without using the handset (full 2-way speaker phone). Two voice controlled attenuators prevent acoustic coupling between the loudspeaker and the microphone. The voice switching circuit has three states, namely idle, transmit or receive. In receive mode the attenuation of the receive path and the transmit path can be controlled by Register VOL between 0 dB and -20 dB . The following table shows how voice switching is controlled

|  | Speech | Mode | Rx-gain | Tx-gain |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Remark |  |  |  |  |  |
| Rx > Tx_atten | X | Receive | 0 db to -20 dB | -50 dB to -30dB | adjustable with VOL-setting |
| Tx_atten > Rx | NO | Idle | -25 | -25 | middle position |
| Tx_atten > Rx | YES | Transmit | -50 dB | 0 dB | independent of VOL-setting |

IDLE-mode

## Serial Interface

## Registers

The settings of the AS2522 are stored in 16 registers. Each register has 4 bit data width. Writing data into the AS2522 also causes the sending of the AS2522 status information on Pin D0. This information consists of the DC-current information (from the Line Loss Compensation circuit) and the status of the power-on reset circuit to test if AS2522 has already powered up.

| D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| LLC5 | LLC4 | LLC3 | LLC2 | LLC1 | LLC0 | xPOR | POR |

Power on reset information in Statusbits D1 and D0

| D1 | D0 |  |
| :---: | :---: | :--- |
| 0 | 0 |  |
| 0 | 1 | AS2522 is in POR state |
| 1 | 0 | AS2522 is active |

| 111111 | $>50 \mathrm{~mA}$ | $>75 \mathrm{~mA}$ |

Timing
The data format for writing to a register has the following form:

Note: The pins $\mathrm{xCS}, C L K, D I$ have internal pull-up resistors.

| Parameter | Symbol | MIN | TYP | MAX |
| :--- | :---: | :---: | :---: | :---: |
| CLK Pulse width HIGH | t6 | 100 ns |  |  |
| CLK Pulse width LOW | t 5 | 100 ns |  |  |
| xCS to first falling CLK- <br> edge setup time | t 1 | 50 ns |  |  |
| CLK to DOUT delay | t 2 |  | 50 ns |  |
| DIN to CLK setup time | t 3 | 50 ns |  |  |
| DIN to CLK hold time | t 4 | 50 ns |  |  |

## Serial interface Registers

The following table shows the content of the 16 control registers.
For a detailed description of the commands see Application note AN522.

| Address | Data | Control registers AS2522A, AS2522B |  | Default value after reset |

## Packaging

32-pin plastic TQFP (suffix Q)
For exact mechanical package dimensions please see austriamicrosystemsag packaging information.

## Pin-out, Marking

## Ordering Information

| Number | Package | Description |
| :--- | :--- | :--- |
| AS2522B Q | TQFP | plastic thin quad flat package - <br> 32 leads (suffix T) |
| AS2522B F | DOF | Dice-on-Foil |

Devices sold by austriamicrosystems AG are covered by the warranty and patent identification provisions appearing in its Term of Sale. austriamicrosystems AG makes no warranty, express, statutory, implied, or by description regarding the information set forth herein or regarding the freedom of the described devices from patent infringement. austriamicrosystems AG reserves the right to change specifications and prices at any time and without notice. Therefore, prior to designing this product into a system, it is necessary to check with austriamicrosystems AG for current information. This product is intended for use in normal commercial applications. Applications requiring extended temperature range, unusual environmental requirements, or high reliability applications, such as military, medical life-support or life-sustaining equipment are specifically not recommended without additional processing by austriamicrosystems AG for each application.
