

Universal-Input/15 W 67 kHz Flyback Switching Regulators

Features and Benefits

- 67 kHz PWM with $\pm 5\%$ Frequency Jittering
Cost Reduction of EMI Noise Filtering
- Rugged 650 V Avalanche-Rated MOSFET
Simplified Surge Absorption
No V_{DSS} Derating Required
- Low $I_{DS(on)}$ (3.95 Ω maximum)
- Auto-Burst Mode for Stand-By Operation or Light Loads
Less Transformer Audible Noise
- Built-In Leading Edge Blanking
- Low Operating Current (4 mA max)

Description

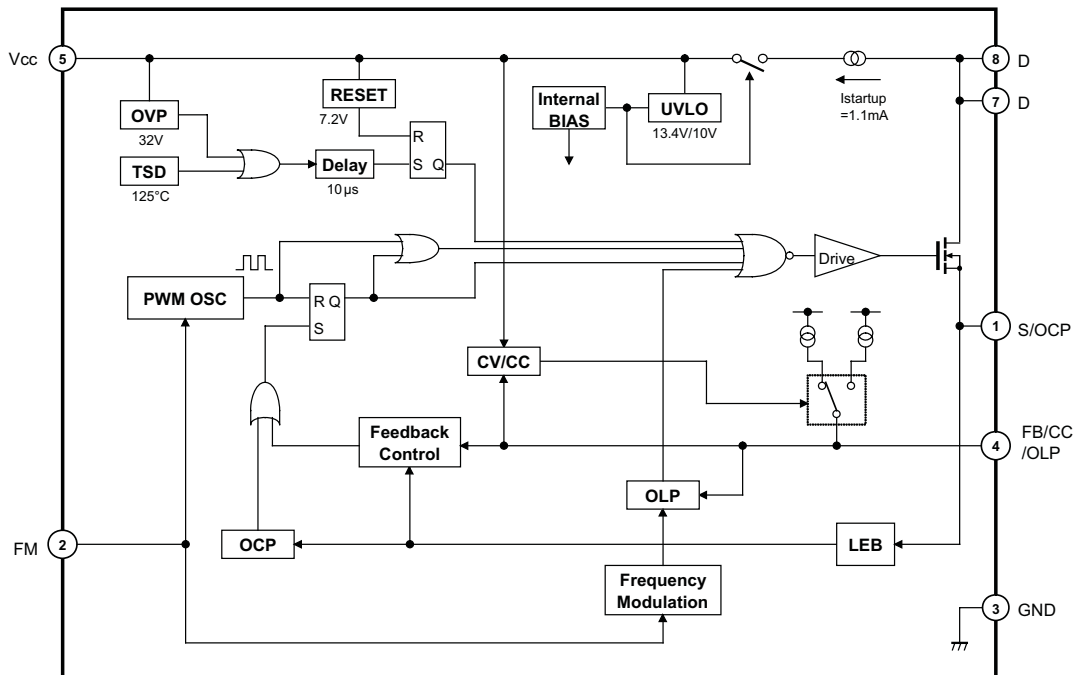

The STR-A6251MD is a 67 kHz PWM topology (with $\pm 5\%$ frequency jittering for minimum EMI) regulators specifically designed to satisfy the requirements for increased integration and reliability in flyback converters. They incorporate a primary control and drive circuit with avalanche-rated power MOSFETs. This is a higher-frequency version of the STR-A6251D.

Covering the power range from below 21 watts for a 230 VAC input, or to 15 watts for a universal (85 to 264 VAC) input, these devices can be used in a wide range of applications, from DVD players and VCR player/recorders to ac adapters for cellular phones and digital cameras. An auto-burst standby function reduces power consumption at light load, while multiple protections, including the avalanche-energy guaranteed MOSFET, provide high reliability of system design.

Cycle-by-cycle current limiting, undervoltage lockout with hysteresis, overvoltage protection, and thermal shutdown protect the power supply during the normal overload and fault conditions. Overvoltage protection and thermal shutdown are latched after a short delay. The latch may

Features and Benefits (continued)

- Automatic Burst Stand-By (intermittent operation)
Input Power <0.1 W at No Load
- Auto-Bias Function
Stable Burst Operation Without Generating Interference
- Internal Off-Timer Circuit
- Built-In Constant-Voltage/Constant Current
- Multiple Protections:
Pulse-by-Pulse Overcurrent Protection (OCP)
Overload Protection (OLP) with Auto Restart
Latching Overvoltage Protection (OVP)
Undervoltage Lockout (UVLO) with Hysteresis
Latching Thermal Shutdown (TSD)

MOSFET TYPICAL CHARACTERISTICS

Avalanche energy is measured at $V_{DD} = 99\text{ V}$,
 $L = 20\text{ mH}$, $I_L = 2.5\text{ A}$.

Recommended Operating Conditions

Operating Ambient Temperature -20°C to $+100^{\circ}\text{C}$
 Operating Junction Temperature -20°C to $+125^{\circ}\text{C}$
 Maximum Frame Temperature $+115^{\circ}\text{C}$

For the availability of parts meeting -40°C requirements, contact Allegro's Sales Representative.

WARNING — These devices are designed to be operated at lethal voltages and energy levels. Circuit designs that embody these components must conform with applicable safety requirements. Precautions must be taken to prevent accidental contact with power-line potentials. Do not connect grounded test equipment.

The use of an isolation transformer is recommended during circuit development and breadboarding.

APPLICATIONS INFORMATION

Typical Application

NOTE: The start-up performance of the IC can only be guaranteed for values of C2 greater than 22 μF. This value is required to keep the internal supply voltage within regulation during IC initialization.

Complete product description and applications information is provided in Application Note 28103.40, *Series STR-A6200 Flyback Switching Regulators*.

The products described herein are manufactured in Japan by Sanken Electric Co., Ltd. for sale by Allegro MicroSystems, Inc.

Sanken and Allegro reserve the right to make, from time to time, such departures from the detail specifications as may be required to permit improvements in the performance, reliability, or manufacturability of its products. Therefore, the user is cautioned to verify that the information in this publication is current before placing any order.

When using the products described herein, the applicability and suitability of such products for the intended purpose shall be reviewed at the users responsibility.

Although Sanken undertakes to enhance the quality and reliability of its products, the occurrence of failure and defect of semiconductor products at a certain rate is inevitable.

Users of Sanken products are requested to take, at their own risk, preventative measures including safety design of the equipment or systems against any possible injury, death, fires or damages to society due to device failure or malfunction.

Sanken products listed in this publication are designed and intended for use as components in general-purpose electronic equipment or apparatus (home appliances, office equipment, telecommunication equipment, measuring equipment, etc.). Their use in any application requiring radiation hardness assurance (e.g., aerospace equipment) is not supported.

When considering the use of Sanken products in applications where higher reliability is required (transportation equipment and its control systems or equipment, fire- or burglar-alarm systems, various safety devices, etc.), contact a company sales representative to discuss and obtain written confirmation of your specifications.

The use of Sanken products without the written consent of Sanken in applications where extremely high reliability is required (aerospace equipment, nuclear power-control stations, life-support systems, etc.) is strictly prohibited.

The information included herein is believed to be accurate and reliable.
