

STR-Y6700 Series

Power IC for Quasi-Resonant Mode Switching Power Supplies with Low Standby Power, High Efficiency and Low Noise in Full Load Range,

■ General Descriptions

The STR-Y6700 series products are power ICs for quasi-resonant (QR) switching mode power supplies, incorporating a power MOSFET and a controller IC.

The product achieves high efficiency and low noise systems, by automatic switching of Auto-Standby operation under light load conditions, QR operation and Bottom-Skip QR operation in normal operation.

The product easily achieves high cost-performance power supply systems with few external components.

TO-220F (FMY207)

■ Features

● Multi-Mode Control

The automatic operation mode switching with three steps according to load conditions achieves the optimal power supply systems with high efficiency and low noise across full load range.

- In Standby ----- Auto Standby Operation (Burst-Oscillation)
- Under Low to Middle Load Conditions ----- Bottom-Skip Quasi-Resonant Operation (Bottom-Skip QR)
- Under Middle to Rating (or Heavy) Load Conditions -- Quasi-Resonant Operation (QR)

● Current-Mode Control

● Built-in Startup Circuit, enabling Low Power Consumption

● Auto-Standby Function with burst-oscillation, enabling low standby power

Input Power at no load : $P_{IN} < 30mW$ (100VAC), $P_{IN} < 50mW$ (240VAC)

● Soft-ON Function, preventing the audible noise from transformer at standby (Burst-Oscillation)

● Built-in Soft-Start Function

● Built-in Bias Assist Function

● Overcurrent Protection (OCP) with AC Input Compensation Function

● Built-in Leading Edge Blanking Function

● Built-in High-Voltage Power MOSFET with Avalanche Energy Guaranteed

● Protection Functions

- Overcurrent Protection (OCP) ----- Pulse-by-Pulse
- Overload Protection (OLP) ----- Latch Shutdown
- Overvoltage Protection (OVP) ----- Latch Shutdown
- Thermal Shutdown Protection (TSD) ----- Latch Shutdown
