

**GENERAL DESCRIPTION**

AK4126 is a 6ch digital sample rate converter (SRC). The input sample rate ranges from 8kHz to 192kHz. The output sample rate is from 8kHz to 192kHz. By using the AK4126, the system can take very simple configuration because the AK4126 has an internal PLL and does not need any master clock. Then the AK4126 is suitable for the application interfacing to different sample rates like multi-channel high-end Car Audio, DVD recorder, etc.

**FEATURES****1. SRC**

- 6 channels input/output
- Asynchronous Sample Rate Converter
- Input Sample Rate Range (fsi): 8kHz ~ 192kHz
- Output Sample Rate Range (fso): 8kHz ~ 192kHz
- Input to Output Sample Rate Ratio: 1/6 to 6
- THD+N: -130dB
- Dynamic Range: 140dB (A-weighted)
- I/F format: MSB justified, LSB justified and I<sup>2</sup>S compatible
- PLL for Internal Operation Clock
- Digital De-emphasis Filter (32kHz, 44.1kHz and 48kHz)
- Soft Mute Function

**2. Power Supply**

- AVDD, DVDD: 3.0 ~ 3.6V (typ. 3.3V)

**3. Ta = -40 ~ 85°C****4. Package: 64LQFP**

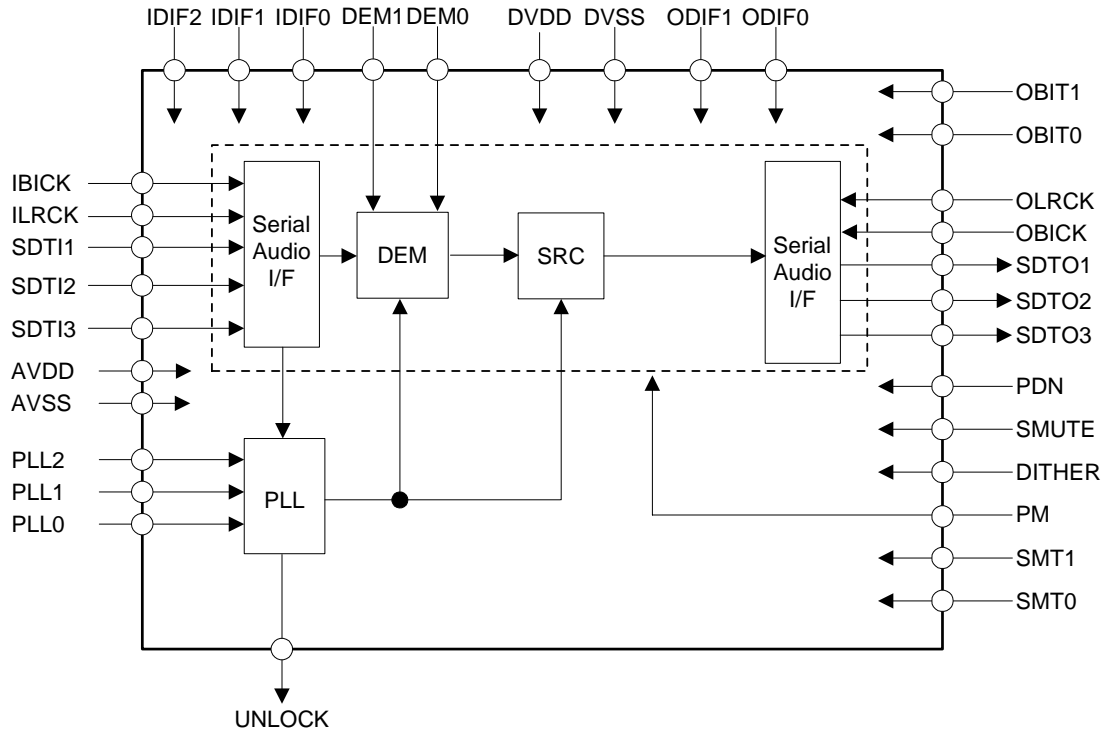

Figure 1. AK4126 Block Diagram

■ Compatibility with AK4125

Parameter	AK4126	AK4125
Channel	6ch	2ch
Maximum Sampling Frequency	192kHz	216kHz
Maximum BICK Frequency	64fs	128fs
Bypass Mode	No	Yes
Master Mode	No	Yes
De-emphasis	Yes	No
Variable Soft Mute Cycle	Yes	No
Group Delay	typ. 57/fs	typ. 56/fs
Package	64LQFP(12mm x 12mm)	30VSOP (9.7mm x 7.6mm)

■ Application Block Circuit Example

1. Most → Amp Unit

2. DVD (5.1ch) → MOST or ASIC

-40 ~ +85°C      64LQFP (0.5mm pitch)  
Evaluation Board for AK4126

■ Pin Layout

PIN / FUNCTION			
No.	Pin Name	I/O	Function
1, 16, 33,48, 49,59, 64	NC	-	No Connect Pin. No internal bonding. This pin must be connected to DVSS.
2	TEST0	I	TEST Pin This pin must be connected to DVSS.
3	ILRCK	I	Input Channel Clock Pin
4	IBICK	I	Audio Serial Data Clock Pin
5	DVDD	-	Digital Power Supply Pin, 3.0 ~ 3.6V
6	DVSS	-	Digital Ground Pin
7	TST0	I	TEST Pin This pin must be connected to DVSS.
8	SDTI1	I	Audio Serial Data Input #1 Pin
9	SDTI2	I	Audio Serial Data Input #2 Pin
10	SDTI3	I	Audio Serial Data Input #3 Pin
11	IDIF0	I	Audio Interface Format #0 Pin for Input PORT
12	IDIF1	I	Audio Interface Format #1 Pin for Input PORT
13	IDIF2	I	Audio Interface Format #2 Pin for Input PORT
14	TST1	I	TEST Pin This pin must be connected to DVSS.
15	TST2	I	TEST Pin This pin must be connected to DVSS.
17	TST3	I	TEST Pin This pin must be connected to DVSS.
18	TST4	I	TEST Pin This pin must be connected to DVSS.
19	UNLOCK	O	Unlock Status Pin
20	DVDD	-	Digital Power Supply Pin, 3.0 ~ 3.6V
21	DVSS	-	Digital Ground Pin
22	SMUTE	I	Soft Mute Pin “H” : Soft Mute, “L” : Normal Operation
23	DITHER	I	Dither Enable Pin “H” : Dither ON, “L” : Dither OFF
24	PDN	I	Power-Down Mode Pin “H”: Power up, “L”: Power down reset and initializes the control register. The AK4126 should be reset once by bringing PDN pin = “L” upon power-up.
25	SMT0	I	Soft Mute Timer Select #0 Pin
26	SMT1	I	Soft Mute Timer Select #1 Pin
27	DEM0	I	De-emphasis Control #0 Pin
28	DEM1	I	De-emphasis Control #1 Pin
29	PM	I	4ch/6ch Mode Select Pin
30	OBIT0	I	Bit Length Select #0 Pin for Output Data
31	OBIT1	I	Bit Length Select #1 Pin for Output Data

Note: All input pins should not be left floating.

PIN / FUNCTION			
No.	Pin Name	I/O	Function
32	TST5	I	TEST Pin This pin must be connected to DVSS.
34	TEST1	I	TEST Pin <b>This pin must be connected to DVDD.</b>
35	TEST2	I	TEST Pin This pin must be connected to DVSS.
36	TEST3	I	TEST Pin This pin must be connected to DVSS.
37	ODIF1	I	Audio Interface Format #1 Pin for Output PORT
38	ODIF0	I	Audio Interface Format #0 Pin for Output PORT
39	SDTO3	O	Audio Serial Data Output #3 Pin for Output PORT
40	SDTO2	O	Audio Serial Data Output #2 Pin for Output PORT
41	SDTO1	O	Audio Serial Data Output #1 Pin for Output PORT
42	TST6	I	TEST Pin This pin must be connected to DVSS.
43	DVSS	-	Digital Ground Pin
44	DVDD	-	Digital Power Supply Pin, 3.0 ~ 3.6V
45	OBICK	I	Audio Serial Data Clock Pin for Output PORT
46	OLRCK	I	Output Channel Clock Pin for Output PORT
47	TEST4	I	TEST Pin This pin must be connected to DVSS.
50	TST7	I	TEST Pin This pin must be connected to DVSS.
51	TST8	I	TEST Pin This pin must be connected to DVSS.
52	DVDD	-	Digital Power Supply Pin, 3.0 ~ 3.6V
53	DVSS	-	Digital Ground Pin
54	PLL2	I	PLL Mode Select #2 Pin
55	PLL1	I	PLL Mode Select #1 Pin
56	PLL0	I	PLL Mode Select #0 Pin
57	TST9	I	TEST Pin This pin must be connected to DVSS.
58	TST10	I	TEST Pin This pin must be connected to DVSS.
60	AVDD	-	Analog Power Supply Pin, 3.0 ~ 3.6V
61	FILT	O	PLL Loop Filter Pin
62	AVSS	-	Analog Ground Pin
63	TST11	O	TEST Pin This pin must be open.

Note: All input pins should not be left floating.

### ■ Handling of Unused pins

The unused digital I/O pins should be processed appropriately as below.

Classification	Pin Name	Setting
Digital	SMUTE, DITHER, PM, TEST0, TEST2 ~4, NC, TST0 ~10, SDTI1, SDTI2, SDTI3	These pins must be connected to DVSS.
	TEST1	This pin must be connected to DVDD.
	UNLOCK, SDTO1, SDTO2, SDTO3, TST11	These pins must be open.

### ABSOLUTE MAXIMUM RATINGS

(AVSS, DVSS=0V; Note 1)

Parameter		Symbol	min	max	Units
Power Supplies: (Note 2)	Analog	AVDD	-0.3	4.6	V
	Digital	DVDD	-0.3	4.6	V
Input Current, Any Pin Except Supplies		IIN	-	±10	mA
Digital Input Voltage (Note 3)		VIND	-0.3	DVDD+0.3	V
Ambient Temperature (Power applied) (Note 4)		Ta	-40	85	°C
Storage Temperature		Tstg	-65	150	°C

Note 1. All voltages with respect to ground.

Note 2. AVSS and DVSS must be connected to the same ground.

Note 3. IDIF2-0, DEM1-0, ODIF1-0, OBIT1-0, OLRCK, OBICK, PDN, SMUTE, PM, SMT1-0, TEST4-0, TST10-0, PLL2-0, SDTI3-1, ILRCK and IBICK pins

Note 4. In case that wiring density is 100%.

WARNING: Operation at or beyond these limits may result in permanent damage to the device.  
Normal operation is not guaranteed at these extremes.

### RECOMMENDED OPERATING CONDITIONS

(AVSS, DVSS=0V; Note 1)

Parameter		Symbol	min	typ	max	Units
Power Supplies: (Note 5)	Analog	AVDD	3.0	3.3	3.6	V
	Digital	DVDD	3.0	3.3	3.6	V
	Difference	AVDD - DVDD	-0.3	0	+0.3	V

Note 1. All voltages with respect to ground.

Note 5. The power up sequence between AVDD and DVDD is not critical.

WARNING: AKM assumes no responsibility for the usage beyond the conditions in this datasheet.

<b>SRC CHARACTERISTICS</b>

**OPERATION OVERVIEW**

■ **System Clock & Audio Interface Format for Input PORT**

The input port works in slave mode. The clocks supply ILRCK and IBICK externally. An internal system clock is created by the internal PLL using ILRCK (Mode 0 ~ 2 of Table 2) or IBICK (Mode 4, 5, 7 of Table 2). The PLL2-0 pins and IDIF2-0 pins select the PLL mode. The PLL2-0 pins and IDIF2-0 pins should be controlled when PDN pin = "L".

The IDIF2-0 pins select the audio interface format for the input port. The audio data is MSB first, 2's complement format. The SDTI is latched on the rising edge of IBICK. Select the audio interface format when PDN pin = "L". The audio interface format of SDTI1, SDTI2 and SDTI3 becomes the same setting. The maximum input frequency of IBICK is 64fsi.

Mode	IDIF2	IDIF1	IDIF0	SDTI Format	IBICK Frequency
0	L	L	L	16bit, LSB justified	≥ 32fsi
1	L	L	H	20bit, LSB justified	≥ 40fsi
2	L	H	L	24/20bit, MSB justified	≥ 48fsi
3	L	H	H	24/16bit, I <sup>2</sup> S Compatible	≥ 48fsi or 32fsi
4	H	L	L	24bit, LSB justified	≥ 48fsi
5	H	L	H	Reserved	
6	H	H	L	Reserved	
7	H	H	H	Reserved	

Table 1. Input Audio Interface Format (Input PORT)

Mode	PLL2	PLL1	PLL0	ILRCK Freq	IBICK Freq	SMUTE (Note 14)
0	L	L	L	8k ~ 96kHz	Depending on IDIF2-0 (Note 12)	Manual
1	L	L	H	8k ~ 192kHz		
2	L	H	L	16k ~ 192kHz (Note 11)		Semi-Auto
3	L	H	H	Reserved		
4	H	L	L	8k ~ 192kHz (Note 12)	32fsi (Note 13)	Manual
5	H	L	H		64fsi	
6	H	H	L	Reserved		
7	H	H	H	8k ~ 192kHz (Note 12)	64fsi	Semi-Auto

Note 11. PLL lock rage is changed by the value of R and C connected FILT pin. Refer to "PLL Loop Filter".

Note 12. The IBCIK must be continuous except when the clocks are changed.

Note 13. IBCIK = 32fsi is supported only 16bit LSB justified and I<sup>2</sup>S Compatible.

Note 14. Refer to "Soft Mute Operation" for Manual mode and Semi-Auto mode.

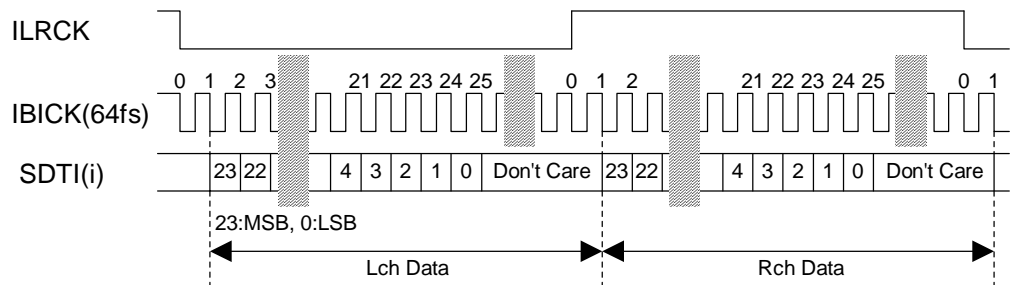

Figure 5. Mode 3 Timing (24bit I<sup>2</sup>S)

Figure 6. Mode 4 Timing

Note: SDTI shows SDTI1, SDTI2 and SDTI3.

■ System Clock & Audio Interface Format for Output PORT

The output port works in slave mode. The clocks supply OLRCK and OBICK externally. The ODIF1-0 pins and OBIT1-0 pins select the audio interface format for the output port. The audio data is MSB first, 2's complement format. The SDTO is clocked out on the falling edge of OBICK. Select the audio interface format when PDN pin = "L". The audio interface format of SDTO1, SDTO2 and SDTO3 becomes the same setting. The maximum input frequency of OBICK is 64fso.

Mode	ODIF1	ODIF0	SDTO Format
0	L	L	LSB justified
1	L	H	(Reserved)
2	H	L	MSB justified
3	H	H	I <sup>2</sup> S Compatible

Table 3. Output Audio Interface Format 1 (Output PORT)

Mode	OBIT1	OBIT0	SDTO	OBICK Frequency	
				MSB justified, I <sup>2</sup> S	LSB justified
0	L	L	16bit	≥ 32fso	64fso
1	L	H	18bit	≥ 36fso	
2	H	L	20bit	≥ 40fso	
3	H	H	24bit	≥ 48fso

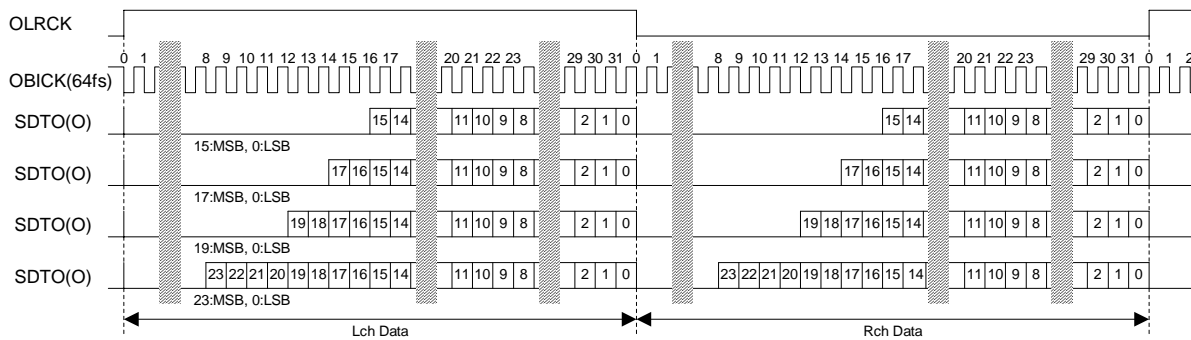

Figure 7. LSB Timing

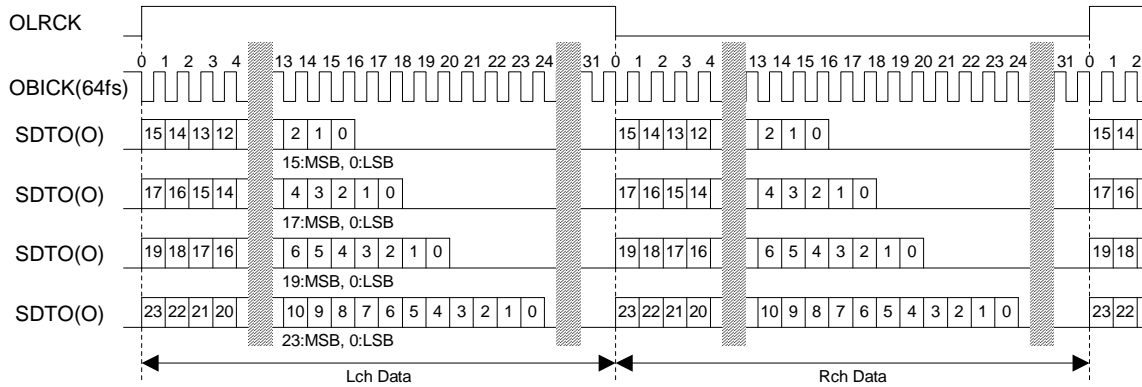

Figure 8. MSB Timing

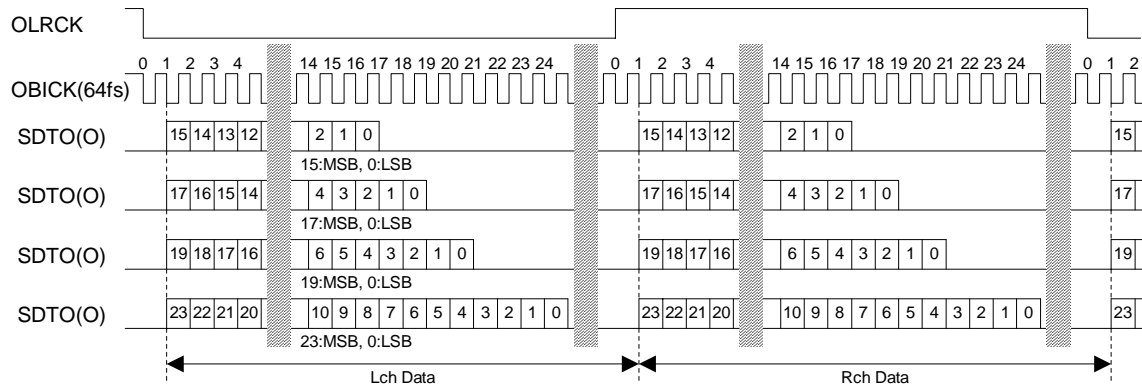

Figure 9. I<sup>2</sup>S Compatible Timing

Note: SDTO shows SDTO1, SDTO2 and SDTO3.

■ 4-channel Mode

The AK4126 has 4-channel mode to reduce power supply current when using four channels in six channels. When PM pin is set to “H”, four channels (SDTI1 → SDTO1 and SDTI2 → SDTO2) in six channels work, and other 2 channels (SDTI3 → SDTO3) are powered-down (SDTO3 outputs “L”).

PM pin	Mode
L	6-channel mode
H	4-channel mode

Table 5. Channel Mode Setting

■ Soft Mute Operation

1. Manual mode

The soft mute operation is performed in the digital domain of the SRC output. The soft mute can be controlled by SMUTE pin. When SMUTE pin goes “H”, all the SRC output data are attenuated by  $-\infty$  during 1024 OLRCK cycles (@ SMT1 pin = “L” and SMT0 pin = “L”). When the SMUTE pin goes “L” the mute is cancelled and the output attenuation gradually changes to 0dB during 1024 OLRCK cycles (@ SMT1 pin = “L” and SMT0 pin = “L”). If the soft mute is cancelled before mute state after starting of the operation, the attenuation is discontinued and returned to 0dB by the same cycles. The soft mute is effective for changing the signal source. Soft mute cycle is selected by SMT1-0 pins. SMT1-0 pins must not be changed during soft mute transition.

SMT1 pin	SMT0 pin	Period	fso=48kHz	fso=96kHz	fso=192kHz
L	L	1024/fso	21.3ms	10.7ms	5.3ms
L	H	2048/fso	42.7ms	21.3ms	10.7ms
H	L	4096/fso	85.3ms	42.7ms	21.3ms
H	H	8192/fso	170.7ms	85.3ms	42.7ms

Table 6. Soft Mute Cycle Setting

Note: SDTO shows SDTO1, SDTO2 and SDTO3.

- (1) The soft mute cycle is selected by SMT1-0 pins. (See Table 6) The output data is attenuated by  $-\infty$  during the soft mute cycle.
- (2) If the soft mute is cancelled before attenuating to  $-\infty$  after starting the operation, the attenuation is discontinued and returned to 0dB by the same number of clock cycles.

Figure 10. Soft Mute Function (Manual Mode)

2. Semi-Auto mode

The soft mute is cancelled automatically by the setting of PLL2-0 pins (refer to Table 2), after the AK4126 detects the rising edge (PDN pin = “L” → “H”) and the mute is continued during  $4410/f_{so}=100ms@f_{so}=44.1kHz$ . After PDN pin = “L” → “H” and when SMUTE pin is “H”, the mute is not cancelled.

Note: SDTO shows SDTO1, SDTO2 and SDTO3.

(1) The output data is attenuated by  $-\infty$  during the soft mute cycle (See Table 6)

Figure 11. Soft Mute Function (Semi-Auto Mode)

■ Dither

The AK4126 includes the dither circuit. The dither circuit adds the dither to the LSB of all the output data set with the OBIT1-0 pins by DITHER pin = “H”.

■ De-emphasis Filter

The AK4126 includes a digital de-emphasis filter ( $t_c = 50/15\mu s$ ) via an IIR filter. This filter corresponds to three frequencies (32kHz, 44.1kHz and 48kHz). This setting is done via DEM1-0 pins (See Table 7), and it is applied to all input data.

DEM1 pin	DEM0 pin	Mode
L	L	44.1kHz
L	H	OFF
H	L	48kHz
H	H	32kHz

Table 7. De-emphasis Filter Setting

■ System Reset

Bringing the PDN pin = “L” sets the AK4126 power-down mode and initializes the digital filter. The AK4126 should be reset once by bringing PDN pin = “L” upon power-up. When PDN pin = “L”, the SDTO output is “L”. The SDTO valid time is 100ms. Until then, the SDTO outputs “L”. (SDTO shows SDTO1, SDTO2 and SDTO3. SDTI shows SDTI1, SDTI2 and SDTI3.)

Figure 12. System Reset

Case 2

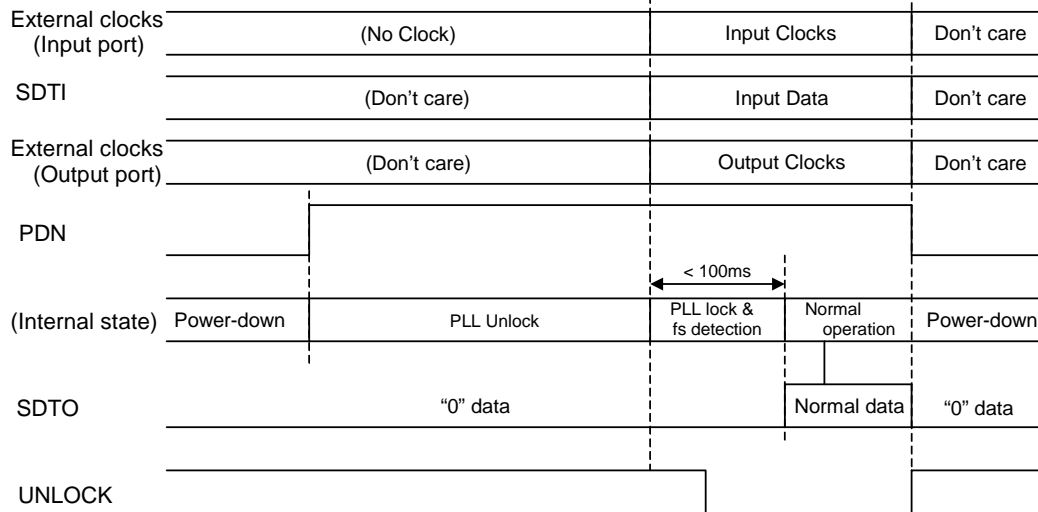

Figure 13. System Reset 2

■ Internal Reset Function for Clock Change

The change of the clock supplied to the AK4126 is shown in Figure 14. SDTO shows SDTO1, SDTO2 and SDTO3.

(1) Soft mute cycle. (See Table 6)

E.g. SMT1 pin = "L", SMT0 pin = "L", fso = 48kHz

Soft mute cycle:  $1024/fso = 21.3\text{ms}$

Note 1. The data on SDTO may cause a clicking noise. To prevent this, set SDTI to "0" from GD before PDN pin goes "L", which will cause the data on SDTO to remain "0".

Note 2. SMUTE can also be used to remove the unknown data.

Figure 14. Sequence of changing clocks

■ UNLOCK pin

The UNLOCK pin outputs "L" when the internal PLL is locked. When the internal PLL is unlocked, the UNLOCK pin outputs "H". When PDN pin = "L", the UNLOCK pin outputs "H".

■ PLL Loop Filter

The C1 and R should be connected in series and attached between FILT pin and AVSS in parallel with C2. (See Figure 15, Table 8 and Table 9) Please be careful the noise onto the FILT pin. When using IBICK, the value of an external element doesn't depend on the IBICK input frequency.

Figure 15. PLL Loop Filter

1. When using ILRCK

PLL2	PLL1	PLL0	ILRCK	R [Ω]	C1 [μF]	C2 [nF]
L	L	L	8k ~ 96kHz	1.8k ± 5%	0.68 ± 30%	0.68 ± 30%
L	L	H	8k ~ 192kHz	1k ± 5%	1.0 ± 30%	2.2 ± 30%
			16k ~ 192kHz	1.5k ± 5%	0.68 ± 30%	0.68 ± 30%
L	H	L	8k ~ 192kHz	1k ± 5%	1.0 ± 30%	2.2 ± 30%
			16k ~ 192kHz	1.5k ± 5%	0.68 ± 30%	0.68 ± 30%

Table 8. PLL Loop Filter (ILRCK Mode)

- Note. Smaller value can be selected for the capacitors (C1, C2) in case of ILRCK range from 16kHz to 192kHz.
- Note. Tolerance of R, C1, and C2 includes the temperature characteristics.

2. When using IBICK

PLL2	PLL1	PLL0	ILRCK	R [Ω]	C1 [μF]	C2 [nF]
H	x	x	8k ~ 192kHz	470 ± 5%	0.22 ± 30%	1.0 ± 30%

Table 9. PLL Loop Filter (IBICK Mode, “x”: Don’t care)

- Note. The IBCIK must be continuous except when the clocks are changed.
- Note. IBCIK = 32fsi is supported only 16bit LSB justified and I<sup>2</sup>S Compatible.
- Note. Tolerance of R, C1, and C2 includes the temperature characteristics.

**SYSTEM DESIGN**

Figure 16 shows the system connection diagram. An evaluation board is available which demonstrates application circuits, the optimum layout, power supply arrangements and measurement results.

- Input PORT: Slave mode, IBICK lock mode (64fsi), 24 bit MSB justified
- Output PORT: Slave mode, 24 bit MSB justified
- Dither = OFF, De-emphasis = OFF, PM = 6ch mode

- Notes:
- All digital input pins should be not left floating.
  - AVSS and DVSS must be connected to the same ground plane.

Figure 16. Typical Connection Diagram

## 1. Grounding and Power Supply Decoupling

The AK4126 requires careful attention to power supply and grounding arrangements. Alternatively if AVDD and DVDD are supplied separately, the power up sequence is not critical. **AVSS and DVSS must be connected to the same ground plane.** Decoupling capacitors should be as near to the AK4126 as possible, with the small value ceramic capacitor being the nearest.

## 2. Jitter Tolerance

Figure 17 shows the jitter tolerance to ILRCK and IBICK for AK4126. The jitter frequency and the jitter amplitude shown in Figure 17 define the jitter quantity. When the jitter amplitude is  $0.01U_{\text{ipp}}$  or less, the AK4126 operate normally regardless of the jitter frequency.

- (1) Normal operation
- (2) There is a possibility that the distortion degrades. (It may degrade up to about  $-50\text{dB}$ .)
- (3) There is a possibility that the output data is lost.

Note:

- When PLL2-0 = "L/L/L", "L/L/H", "L/H/L", the jitter amplitude is for ILRCK and 1UI (Unit Interval) is one cycle of ILRCK. When FSI = 48kHz, 1UI is  $1/48\text{kHz} = 20.8\mu\text{s}$ .
- When PLL2-0 = "H/\*/\*" (\*: Don't care), the jitter amplitude is for IBICK and 1UI (Unit Interval) is one cycle of IBICK. When FSI = 48kHz, 1UI is  $1/(64 \times 48\text{kHz}) = 326\text{ns}$ .

Figure 17. Jitter Tolerance

### Tracking to the Input Sampling Frequency

When the ILRCK is generated by an external PLL, it may take a time to settle after changing the input sampling frequency because the response of an external PLL to the frequency change is slow. AK4126 operates normally up to 23%/sec speed and the output data becomes incorrect at the speed of the frequency change over 23%/sec.

### 3. Digital Filter Response Example

Table 10 shows the examples of digital filter response performed by the AK4126.

Ratio	FSO/FSI [kHz]	Passband [kHz]	Stopband [kHz]	Stopband Attenuation [dB]	Gain [dB]
4.000	192/48.0	22.000	26.000	-121.2	-0.01@ 20k

### IMPORTANT NOTICE

- These products and their specifications are subject to change without notice. Before considering any use or application, consult the Asahi Kasei Microsystems Co., Ltd. (AKM) sales office or authorized distributor concerning their current status.
- AKM assumes no liability for infringement of any patent, intellectual property, or other right in the application or use of any information contained herein.
- Any export of these products, or devices or systems containing them, may require an export license or other official approval under the law and regulations of the country of export pertaining to customs and tariffs, currency exchange, or strategic materials.
- AKM products are neither intended nor authorized for use as critical components in any safety, life support, or other hazard related device or system, and AKM assumes no responsibility relating to any such use, except with the express written consent of the Representative Director of AKM. As used here:
  - a. A hazard related device or system is one designed or intended for life support or maintenance of safety or for applications in medicine, aerospace, nuclear energy, or other fields, in which its failure to function or perform may reasonably be expected to result in loss of life or in significant injury or damage to person or property.
  - b. A critical component is one whose failure to function or perform may reasonably be expected to result, whether directly or indirectly, in the loss of the safety or effectiveness of the device or system containing it, and which must therefore meet very high standards of performance and reliability.
- It is the responsibility of the buyer or distributor of an AKM product who distributes, disposes of, or otherwise places the product with a third party to notify that party in advance of the above content and conditions, and the buyer or distributor agrees to assume any and all responsibility and liability for and hold AKM harmless from any and all claims arising from the use of said product in the absence of such notification.
