Issue Date: Jun. 15, 2007

MSM7570AL-01/02

Multi-Function ADPCM CODEC

GENERAL DESCRIPTION

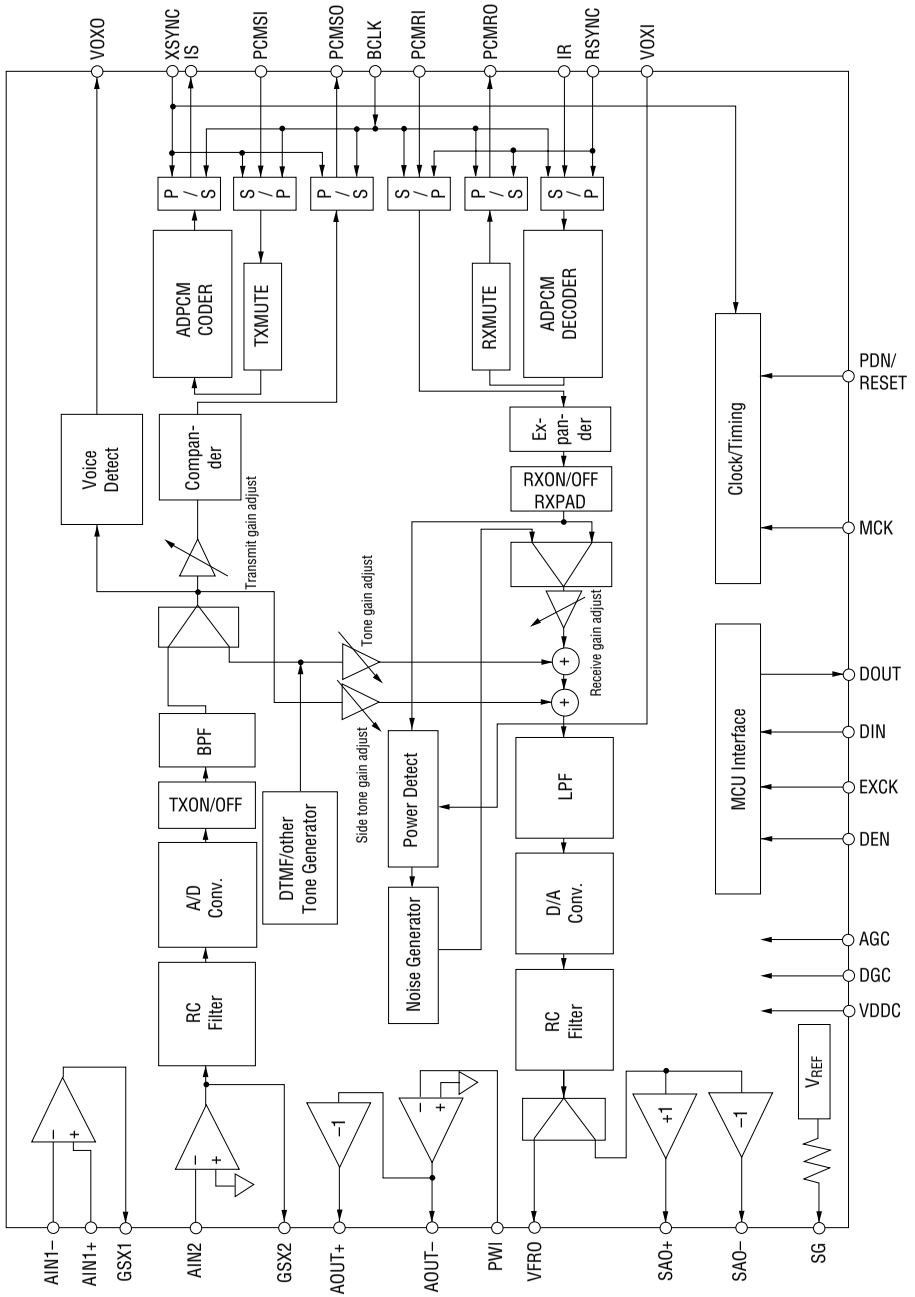
The MSM7570AL-01/02, developed for advanced digital cordless telephone systems, are single channel ADPCM CODEC ICs which perform mutual transcoding between the analog voice band signal and 32 kbps ADPCM serial data.
The devices include DTMF Tone and several types of tone generation, transmit/receive data mute and gain control, side-tone path and gain control, and VOX function.
Using advanced circuit technology, these devices operate from a single 3 V power supply and provide low power consumption.

Note: The MSM7570AL–01differs from MSM7570AL–02 in Ringing Tone Frequency.

FEATURES

- Single 3 V Power Supply Operation V_{DD}: 2.7 V to 3.6 V
- ADPCM Algorithm : ITU-T G.726 (32 kbps, 24 kbps, 16 kbps)
- Full-Duplex Transmit/Receive Operation
- Transmit/Receive Synchronous Mode Only
- PCM Data Format : A-law/μ-law Selectable
- Serial PCM/ADPCM Transmission Data Rate :64 kbps to 2048 kbps
- Low Power Consumption
  - Operating Mode : 21 mW Typ. (V_{DD} = 3.0 V)
  - Power-Down Mode : 0.3 mW Typ. (V_{DD} = 3.0 V)
- Two Analog Input Amplifier Stages : Externally Adjustable Gain
- Analog Output Stage : Push-pull Drive (direct drive of 350 Ω + 120 nF)
- Master Clock Frequency : 12.288/19.200 MHz Selectable
- Transmit/Receive Mute, Transmit/Receive Programmable Gain Control
- Side Tone Path with Programmable Attenuation (8-step Level Adjustment)
- Built-in DTMF Tone Generator
- Built-in Various Ringing/Function Tones Generator
- Built-in Various Ring Back Tone Generator
- Serial MCU Interface Control
- Built-in Sounder Driving Amplifier
- Built-in VOX Control
  - Transmit side : Voice Signal Detect
  - Receive side : Background Noise Generation
- Characteristic Evaluation Board.
- Package:
  32-pin plastic TSOP (TSOP(1)32-P-0814-0.50-1K) (Product name: MSM7570AL-01TS-K)
  (Product name: MSM7570AL-02TS-K)

BLOCK DIAGRAM



PIN CONFIGURATION (TOP VIEW)

32-Pin Plastic TSOP

PIN AND FUNCTIONAL DESCRIPTIONS

AIN1+, AIN1–, AIN2, GSX1, GSX2

Transmits analog input and the output for transmit gain adjustment.
AIN1– (AIN2) connects to the inverting input of the internal transmit amplifier. AIN1+ connects to the non-inverting input of the internal transmit amplifier. GSX1 (GSX2) connects to the internal transmit amplifier output. Refer to Fig.1 for gain adjustment.

VFRO, AOUT+, AOUT–, PWI

Receives analog output and the output for receive gain adjustment.
VFRO is the receive filter output. AOUT+ and AOUT– are differential analog signal outputs which can directly drive Z_L = 350 Ω + 120 nF or a 1.2 kΩ load. Refer to Fig.1 for gain adjustment.

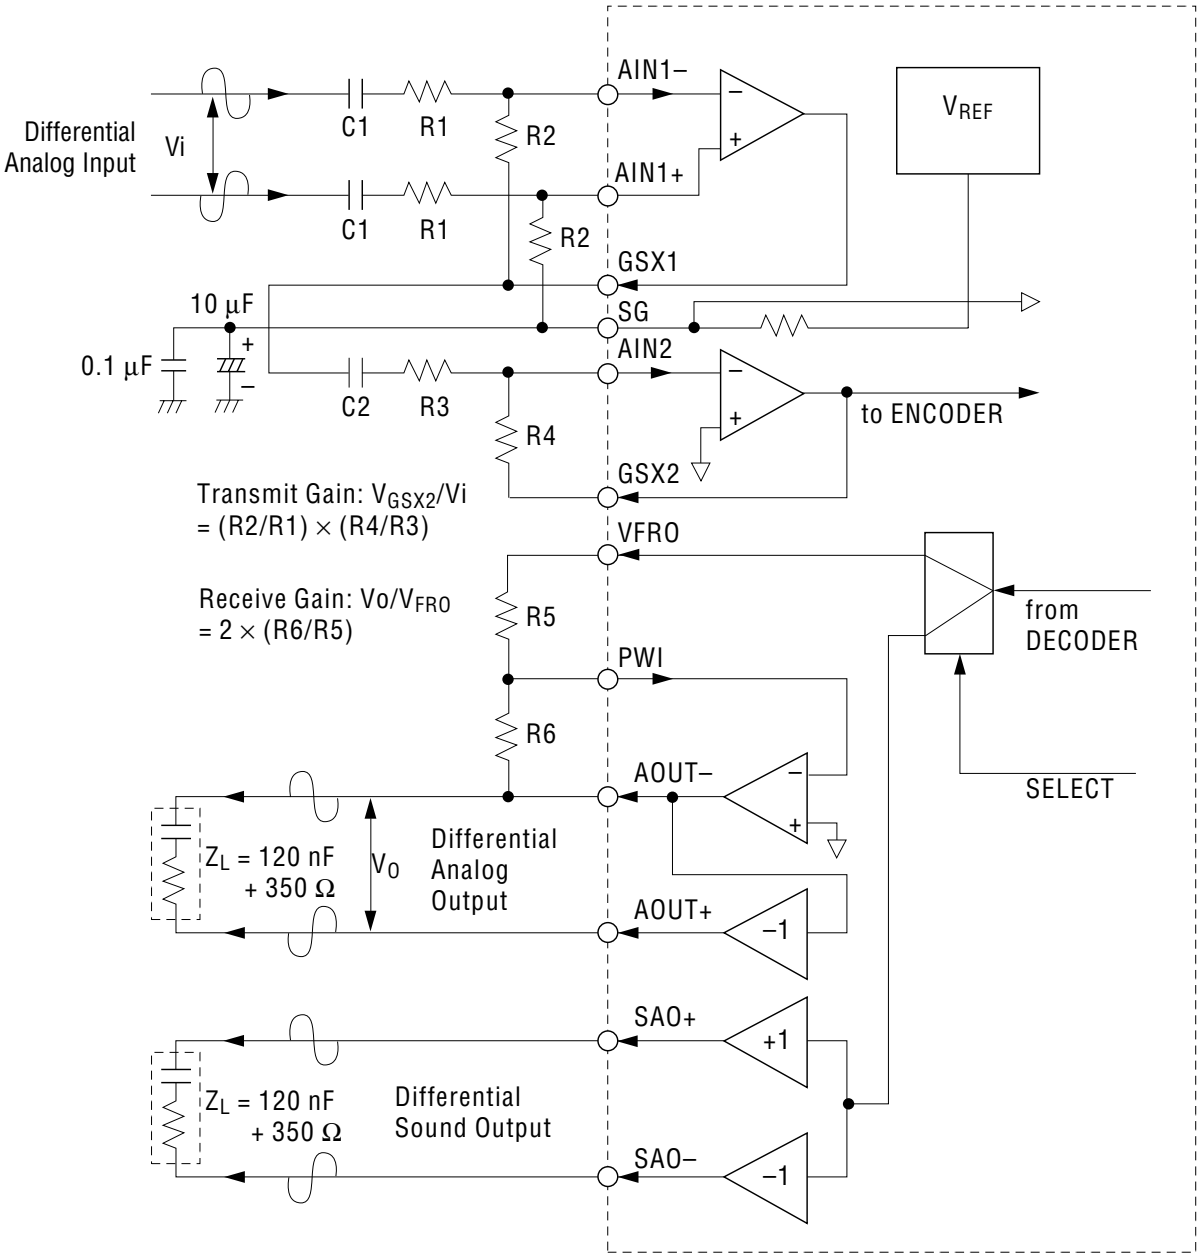


Figure 1 Analog Input/Output Interface

SAO+, SAO–

Differential analog outputs for sound output.
Control register data CR4-B5 determines the output pins (AOUT+ and AOUT- /SAO+ and SAO-) for the voice signal and an acoustic component of the sound tone, DTMF tone, R tone, F tone, and various types of tones at either the VFRO pin or the SAO+ and SAO- pins. The output load conditions of these pins are the same as those of AOUT+ and AOUT-.

SG

Analog signal ground.
The output voltage of this pin is approximately 1.4 V. Put the bypass capacitors (10 µF in parallel with 0.1 µF ceramic type) between this pin and AG to get the specified noise characteristics. During power-down, this output voltage is 0 V. The SG voltage if necessary should be used via a beffer.

AG

Analog ground.

DG

Digital ground.
This ground is separated from the analog signal ground pin (AG). The DG pin must be kept as close as possible to AG on the PCB.

V_{DD}

+3 V power supply.

$\overline{\text{PDN/RESET}}$

Power down and reset control input.
A "0" level makes the IC enter a power down state. At the same time, all control register data are reset to the initial state. Set this pin to "1" during normal operating mode. The power down state is controlled by a logical OR with CR0-B5 of the control register. When using $\overline{\text{PDN/RESET}}$ for power down and reset control, set CR0-B5 to digital "0".
The reset width (during "L") should be 200ns or more.
Be sure to reset the control registers by executing this power down to keep this pin to digital "0" level for 200ns or longer after the power is turned on and V_{DD} exceeds 2.7V.

MCK

Master clock input.
The frequency must be 12.288 MHz or 19.2 MHz. The applied clock frequency is selected by the control register data CR0-B6. The master clock signal may be asynchronous with BCLK, XSYNC, and RSYNC.

PCMSO

Transmit PCM data output.
PCM is output from MSB in synchronization with the rising edge of BCLK and XSYNC.

PCMSI

Transmit PCM data input.
This signal is converted to the transmit ADPCM data. PCM is shifted in synchronization with the falling edge of BCLK. Normally, this pin is connected to PCMSO.

PCMRO

Receive PCM data output.
PCM is the output signal after ADPCM decoder processing. This signal is output serially from MSB in synchronization with the rising edge of BCLK and RSYNC.

PCMRI

Receive PCM data input.
PCM is shifted on the rising edge of the BCLK and input from MSB. Normally, this pin is connected to PCMRO.

IS

Transmit ADPCM signal output.
After having encoded PCM with ADPCM, this signal is output from MSB in synchronization with the rising edge of BCLK and XSYNC. This pin is an open drain output and remains in a high impedence state during power-down. IS requires a pull-up resistor.

IR

Receive ADPCM signal input.
This input signal is shifted serially on the falling edge of BCLK in synchronization with RSYNC, and input from MSB.

BCLK

Shift clock input for the PCM data (PCMSO, PCMSI, PCMRO, PCMRI) and the ADPCM data(IS, IR) .
The frequency is set in the 64 kHz to 2048 kHz range.

XSYNC

Transmit PCM and ADPCM data 8 kHz synchronous signal input.
Synchronize this signal with BCLK signal. XSYNC is used to indicate the MSB of the transmit serial PCM and ADPCM data stream.
Be sure to input the XSYNC signal because it is also used as the input of the timing generator.

RSYNC

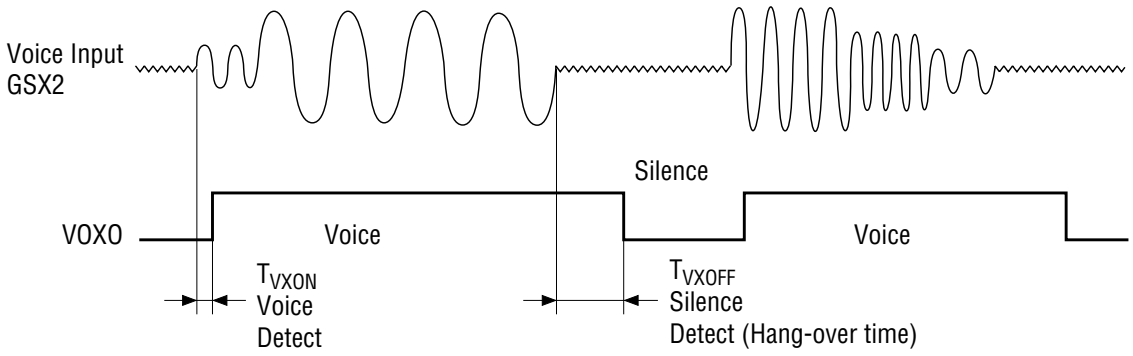
Receive PCM and ADPCM data synchronous signal input.
Synchronize this signal with BCLK signal. RSYNC is used to indicate the MSB of the receive serial PCM and ADPCM data stream.

VOXO

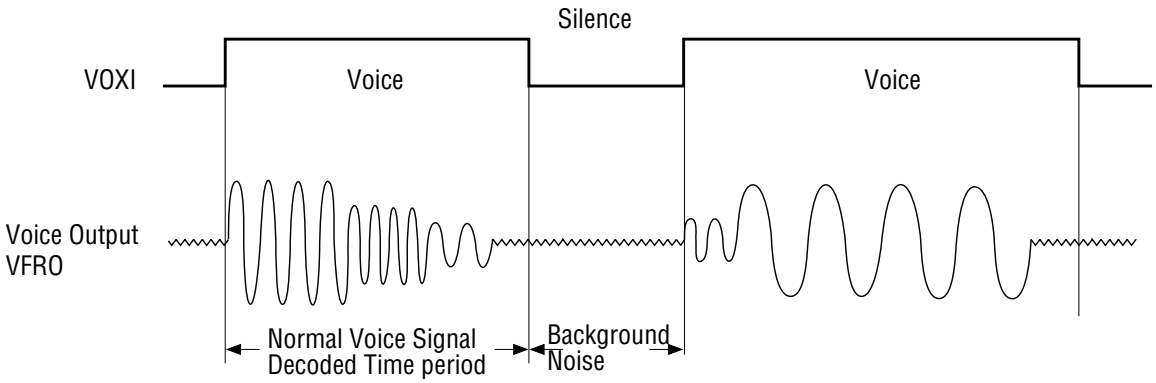
Transmit VOX function signal output.
VOX function voice recognizes the presence or absence of the transmit voice signal by detecting the signal energy. "1" and "0" levels set on this pin correspond to the presence and the absence of voice, respectively. This result appears at the register data CR7-B7. The signal energy detect threshold is set by the control register data CR6-B6, B5.

VOXI

Signal input for receive VOX function.
A "1" level at VOXI indicates the presence of a voice signal. The decoder block processes normal receive signal, and the voice signal appears at the analog output pins . The "0" level indicates the absence of a voice signal. Background noise generated in this device is transferred to the analog output pins. The background noise amplitude is set by the control register CR6. Because this signal is ORed with the register data CR6-B3, set the control register data CR6-B3 to digital "0".



(a) Transmit VOX Function Timing Diagram



(b) Receive VOX Function (CR6-B3: digital "0") Timing Diagram

Note: VOXO, VOXI functions becomes valid when setting CR6-B7 to digital “1”.

Figure 2 VOX Function

DEN , EXCK, DIN, DOUT

Serial control ports for MCU interface.
Reading and writing data are performed by an external MCU through these pins. Eight registers with eight bits are provided on the devices.
DEN is the "Enable" control signal input, EXCK is the data shift clock input, DIN is the address and data input, and DOUT is the data output.
Fig.3 shows the input/output timing diagram.

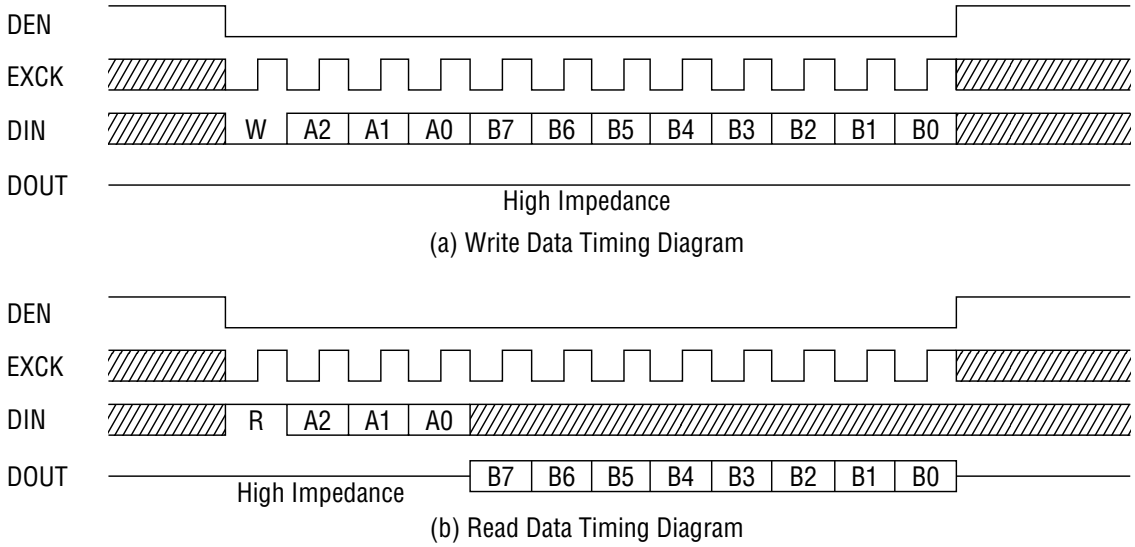


Figure 3 MCU Interface Input/Output Timing

Table 1 shows the register map.

Table-1

Name	Address			Control and Detect Data								R/W
	A2	A1	A0	B7	B6	B5	B4	B3	B2	B1	B0	
CR0	0	0	0	A/μ SEL	MCK SEL	PDN ALL	—	—	—	—	PDN SAO/AOUT	R/W

FUNCTIONAL DESCRIPTION

Control Registers

(1) CR0 (Basic operating mode)

	B7	B6	B5	B4	B3	B2	B1	B0
CR0	A/μ SEL	MCK SEL	PDN ALL	—	—	—	—	PDN SAO/AOUT
Initial Value (Note)	0	0	0	0	0	0	0	0

Note: Initial Value: Reset state by $\overline{\text{PDN/RESET}}$

B7 ...PCM Companding law select; 0/μ-law, 1/A-law
B6 ...Master clock frequency select; 0/12.288 MHz, 1/19.200 MHz
B5 ...Power down (entire system); 0/Power on, 1/Power down
When using this data for power down control, set pin $\overline{\text{PDN/RESET}}$ at "1"level.
The control registers are not reset by this signal.
B2 ...Not used
B1 ...Not used
B0 ...Power Down for Sound output amps: (SAO+, SAO–), or Receiver output amp (AOUT+, AOUT–, VFRO);
If this data is set to digital "1", either a pair of sound amplifiers or a pair of reciver amplifiers enters the power down state depending on the set data on CR4-B5.
If this data is set to digital "0", sound amplifiers and receiver amplifiers are in the power-on state.
B4, B3 ...Not used (These pins are used to test the device. They should be set to "0" during normal operation.)

(2) CR1 (ADPCM block operating mode)

	B7	B6	B5	B4	B3	B2	B1	B0
CR1	MODE1	MODE0	TX RESET	RX RESET	TX MUTE	RX MUTE	—	RX PAD
Initial Value	0	0	0	0	0	0	0	0

B7, B6 ... ADPCM data compression algorithm select;
- (0, 0): 32 kbps
- (0, 1): 64 kbps (data through)
- (1, 0): 24 kbps
- (1, 1): 16 kbps

B5 ... ADPCM of transmit reset (specified by G.726); 1/Reset*
B4 ... ADPCM of receive reset (specified by G.726); 1/Reset*
B3 ... ADPCM transmit data mute, 1/Mute
B2 ... ADPCM receive data mute, 1/Mute
B1 ... Not used
B0 ... Receive side PAD, 1/inserted,12 dB loss
0/no PAD

* The reset width should be 125µs or more.
The transmitter and receiver cannot be reset separately.
They must be reset at the same time.

(3) CR2 (PCM CODEC operational mode setting and transmit/receive gain adjustment)

	B7	B6	B5	B4	B3	B2	B1	B0
CR2	TX ON/OFF	TX GAIN2	TX GAIN1	TX GAIN0	RX ON/OFF	RX GAIN2	RX GAIN1	RX GAIN0
Initial Value	0	0	0	0	0	0	0	0

B7 ... PCM Coder disable; 0/Enable, 1/Disable (transmit PCM idle pattern)
B6, B5, B4 ... Transmit gain adjustment, refer to Table-2.
B3 ... PCM Decoder disable; 0/Enable, 1/Disable (receive PCM idle pattern)
B2, B1, B0 ... Receive gain setting, refer to Table-2.

Table-2

B6	B5	B4	Transmit Gain	B2	B1	B0	Receive Gain
0	0	0	–6 dB	0	0	0	–6 dB
0	0	1	–4 dB	0	0	1	–4 dB
0	1	0	–2 dB	0	1	0	–2 dB
0	1	1	0 dB	0	1	1	0 dB
1	0	0	+2 dB	1	0	0	+2 dB
1	0	1	+4 dB	1	0	1	+4 dB
1	1	0	+6 dB	1	1	0	+6 dB
1	1	1	+8 dB	1	1	1	+8 dB

This programmable gain table, not only for transmit/receive voice signal and the transmitted DTMF and other tones. The transmission of these tone signal is enabled by the CR4-B6 data described later. The original (reference) signal amplitude of these tones is analogically defined as follows.

DTMF low-group-tones ..... –16 dBm0
DTMF high-group-tones and others ..... –14 dBm0

For example, when selecting +8 dB (B6, B5, B4) = (1,1,1) as a transmit gain, each tone signal amplitude with an analogical expression on the pin PCMSO becomes as follows .

DTMF low-group tones ..... –8 dBm0
DTMF high-group tones and other tones ..... –6 dBm0

Gain setting for the side tone (path to receive side from transmit side) and the receive side tone is performed by register CR3.

(4) CR3 (Side tone and other tone generator gain setting)

	B7	B6	B5	B4	B3	B2	B1	B0
CR3	Side. Tone GAIN2	Side. Tone GAIN1	Side. Tone GAIN0	TONE ON/OFF	TONE GAIN3	TONE GAIN2	TONE GAIN1	TONE GAIN0
Initial Value	0	0	0	0	0	0	0	0

B7, B6, B5 ... Side tone path gain setting, refer to Table-3.
B4 ... Tone generator enable; 0/Disable, 1/Enable
B3, B2, B1, B0 ... Tone generator gain adjustment for receive side, refer to Table-4

Table-3

B7	B6	B5	Side Tone Path Gain
0	0	0	OFF
0	0	1	–21 dB
0	1	0	–19 dB
0	1	1	–17 dB
1	0	0	–15 dB
1	0	1	–13 dB
1	1	0	–11 dB
1	1	1	–9 dB

Table-4

B3	B2	B1	B0	Tone Generator Gain	B3	B2	B1	B0	Tone Generator Gain
0	0	0	0	–36 dB	1	0	0	0	–20 dB
0	0	0	1	–34 dB	1	0	0	1	–18 dB
0	0	1	0	–32 dB	1	0	1	0	–16 dB
0	0	1	1	–30 dB	1	0	1	1	–14 dB
0	1	0	0	–28 dB	1	1	0	0	–12 dB
0	1	0	1	–26 dB	1	1	0	1	–10 dB
0	1	1	0	–24 dB	1	1	1	0	–8 dB
0	1	1	1	–22 dB	1	1	1	1	–6 dB

The tone generator gain setting table for the receive side, as shown in Table-4, depends upon the following reference level.

DTMF low-group tones ..... –2 dBm0
DTMF high-group tones and others 0 dBm0

For example, when selecting –6 dB (B3, B2, B1, B0) = (1, 1, 1, 1) as a tone generator gain, each DTMF tone signal amplitude on SAO+/SAO– or VFRO is as follows.

DTMF low-group tone ..... –8 dBm0
DTMF high-group tone or other tones ..... –6 dBm0

(5) CR4 (Tone genereator operating mode and frequency select)

	B7	B6	B5	B4	B3	B2	B1	B0
CR4	DTMF/OTHERS SEL	TONE SEND	SAO/ VFRO	TONE4	TONE3	TONE2	TONE1	TONE0
Initial Value	0	0	0	0	0	0	0	0

B7 ... DTMF or other tones select; 0/Others, 1/DTMF
B6 ... Tone transmit enable (Transmit side); 0/Voice signal (transmit), 1/Tone transmit
B5 ... Tone output pin select (Receive side); 0/VFRO, 1/SAO+ and SAO–
B4, B3, B2, B1, B0 ... Tone frequency setting, referred to Table-5-1, 5-2, and 5-3.

(a) B7 = 1 (DTMF tone)

Table-5-1

B4	B3	B2	B1	B0	Frequency	B4	B3	B2	B1	B0	Frequency

	B7	B6	B5	B4	B3	B2	B1	B0
CR5	—	—	—	—	—	—	—	—
Initial Value	0	0	0	0	0	0	0	0

B7 – B0..... Not used

(7) CR6 (VOX function control)

	B7	B6	B5	B4	B3	B2	B1	B0
CR6	VOX ON/OFF	ON LVL1	ON LVL0	OFF TIME	VOX IN	RX NOISE LEVEL SEL	RX NOISE LVL1	RX NOISE LVL0
Initial Value	0	0	0	0	0	0	0	0

B7 ... VOX function enable; 0/Disable, 1/Enable
B6, B5 ... Transmit signal energy detect (Transmit VOX) threshold
(0, 0): –30 dBm0
(0, 1): –35 dBm0
(1, 0): –40 dBm0
(1, 1): –45 dBm0
B4 ... Hang-over time (Fig.2, $T_{VXOFF)}$; 0/160 ms, 1/320 ms
B3 ... Receive VOX function setting; 0/Background noise transmit, 1/Voice signal detect
When using this data for control, set pin VOXI at "0" level.
B2 ... Background noise amplitude setting; 0/Automatic, 1/Programmable by B1 and B0
Automatic : Set the noise at the voice signal amplitude when B3 (or VOXI) changes from "1" to digital "0".
B1, B0 ... (0, 0): No noise
(0, 1): –55 dBm0
(1, 0): –45 dBm0
(1, 1): –35 dBm0

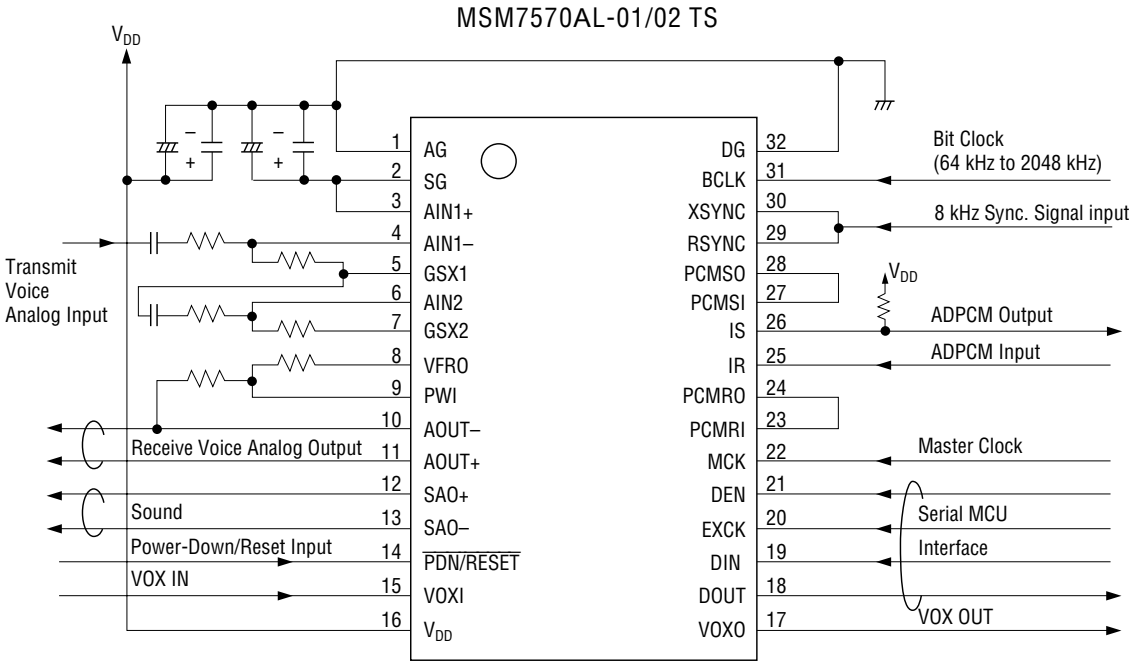
(8) CR7 (Detect register, read only)

	B7	B6	B5	B4	B3	B2	B1	B0
CR7	VOX OUT	TX NOISE LVL1	TX NOISE LVL0	—	—	—	—	—
Initial Value	0	0	0	*	*	*	*	*

* For IC test

B7 ... Transmit VOX function result; 0/Silence, 1/Voice
B6, B5 ... Transmit silence level (indicator); (at 1000 Hz)
(0, 0) : Below –60 dBm0
(0, 1) : –50 to –60 dBm0
(1, 0) : –40 to –50 dBm0
(1, 1) : Above –40 dBm0
Note: These outputs are valid only when the VOX function is enabled by CR6-B7.
B4 ... Not used
B3 ... Not used
B2 ... Not used
B1 ... Not used
B0 ... Not used

APPLICATION CIRCUIT

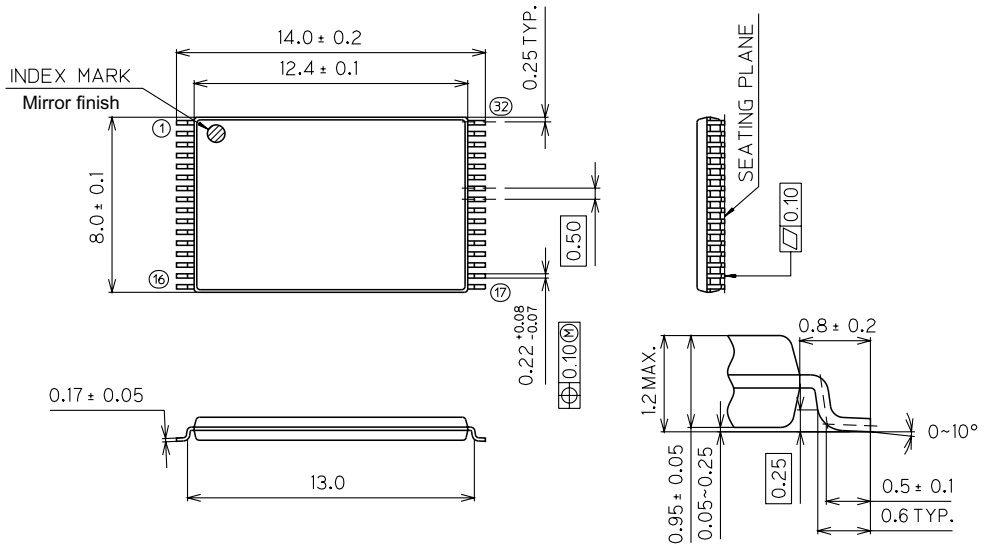


* Single-ended Analog Input Stage Type

PACKAGE DIMENSIONS

(Unit : mm)

TSOP(1)32-P-0814-0.50-1K



Package material	Epoxy resin
Lead frame material	42 alloy
Pin treatment	Solder plating (≥5 µm)
Package weight (g)	0.27 TYP.
Rev. No./Last Revised	3/Dec. 10, 1996

Oki Electric Industry Co., Ltd.

Notes for Mounting the Surface Mount Type Package

The SOP, QFP, TSOP, SOJ, QFJ (PLCC), SHP and BGA are surface mount type packages, which are very susceptible to heat in reflow mounting and humidity absorbed in storage.
Therefore, before you perform reflow mounting, contact Oki's responsible sales person for the product name, package name, pin number, package code and desired mounting conditions (reflow method, temperature and times).

NOTICE

1. The information contained herein can change without notice owing to product and/or technical improvements. Before using the product, please make sure that the information being referred to is up-to-date.

2. The outline of action and examples for application circuits described herein have been chosen as an explanation for the standard action and performance of the product. When planning to use the product, please ensure that the external conditions are reflected in the actual circuit, assembly, and program designs.

3. When designing your product, please use our product below the specified maximum ratings and within the specified operating ranges including, but not limited to, operating voltage, power dissipation, and operating temperature.

4. OKI assumes no responsibility or liability whatsoever for any failure or unusual or unexpected operation resulting from misuse, neglect, improper installation, repair, alteration or accident, improper handling, or unusual physical or electrical stress including, but not limited to, exposure to parameters beyond the specified maximum ratings or operation outside the specified operating range.

5. Neither indemnity against nor license of a third party's industrial and intellectual property right, etc. is granted by us in connection with the use of the product and/or the information and drawings contained herein. No responsibility is assumed by us for any infringement of a third party's right which may result from the use thereof.

6. The products listed in this document are intended for use in general electronics equipment for commercial applications (e.g., office automation, communication equipment, measurement equipment, consumer electronics, etc.). These products are not, unless specifically authorized by OKI, authorized for use in any system or application that requires special or enhanced quality and reliability characteristics nor in any system or application where the failure of such system or application may result in the loss or damage of property, or death or injury to humans.
   Such applications include, but are not limited to, traffic and automotive equipment, safety devices, aerospace equipment, nuclear power control, medical equipment, and life-support systems.

7. Certain products in this document may need government approval before they can be exported to particular countries. The purchaser assumes the responsibility of determining the legality of export of these products and will take appropriate and necessary steps at their own expense for these.

8. No part of the contents contained herein may be reprinted or reproduced without our prior permission.
