### **■**TERMINAL INFORMATION

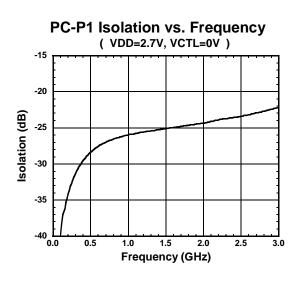

Pin	Symbol	Description	
1	P1	RF port. This port is connected with PC port by controlling 5 pin (VCTL) to 2.0V~V <sub>DD</sub> . An external capacitor is required to block the DC bias voltage of internal circuit.	
2	GND	Ground terminal. Please connect this terminal with ground plane as close as possible for excellent RF performance.	
3	P2	RF port. This port is connected with PC port by controlling 5 pin (VCTL) to 0V~+0.8V. An external capacitor is required to block the DC bias voltage of internal circuit.	
4	GND	Ground terminal. Please connect this terminal with ground plane as close as possible for excellent RF performance.	
5	VCTL	Control port. This terminal is set to High-Level by 2V~V <sub>DD</sub> , and Low-Level by +0.8~0V.	
6	PC	Common RF port. In order to block the DC bias voltage of internal circuit, an external capacitor is required.	
7	VDD	Positive voltage supply terminal. The positive voltage (+2.5~+6.5V) have to be supplied. The bypass capacitor should be connected with GND as close as possible for excellent RF performance.	
8	GND	Ground terminal. Please connect this terminal with ground plane as close as possible for excellent RF performance.
