

SP9T ANTENNA SWITCH GaAs MMIC

■ GENERAL DESCRIPTION

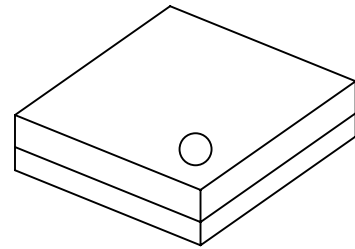

The NJG1672LK4 is a GaAs SP9T antenna switch IC for GSM/TD-SCDMA multi-band handsets. The IC contains a MMIC switch die with on-chip logic circuits and a LTCC substrate with built-in three LPFs on GSM/TD-SCDMA transmit paths for suppression of transmitter harmonics.

This switch IC features very low harmonics, low insertion loss, high Isolation and small package size.

This IC has ESD protection devices to achieve excellent ESD performance.

No DC Blocking capacitors are required for RF ports.

Since all RF ports are biased at GND voltage, no DC cut capacitors are required on all RF ports.
 When the RF port of the adjacent component is DC biased and connected with the RF port of NJG1672LK4, DC cut capacitor is required.
