

HI-8588-10

ARINC 429 Line Receiver

March 2007

### DESCRIPTION

The HI-8588-10 ARINC 429 bus interface receiver is similar to the HI-8588 with the exception that it allows an external 10 Kohm resistor in series with each ARINC input without affecting the ARINC input thresholds. The product is especially useful in applications where lightning protection circuitry is also required. In addition, the test inputs force both of the outputs to zero instead of open circuit. The analog/digital CMOS product requires only a 5 volt supply and is available in a 8-pin SOIC package.

Each side of the ARINC bus <u>must</u> be connected through a 10 Kohm series resistor in order for the chip to detect the correct ARINC levels. The typical 10 volt differential signal is translated and input to a window comparator and latch. The comparator levels are set so that with the external 10 Kohm resistors they are just below the standard 6.5 volt minimum ARINC data threshold and just above the standard 2.5 volt maximum ARINC null threshold.

The TESTA and TESTB inputs bypass the analog inputs for testing purposes. Also if TESTA and TESTB are both taken high, the digital outputs are forced to zero.

See Holt Application Note AN-300 for more information on lightning protection.

## **FEATURES**

- ARINC 429 line receiver interface in a small outline package
- Lightning protection simplified with the ability to add 10 Kohm external series resistors
- Receiver input hystersis at least 2 volts
- Test inputs bypass analog inputs and force digital outputs to an one, zero or null state
- Plastic and ceramic package options surface mount and DIP
- Mil processing available

#### PIN CONFIGURATION

HI-8588PSI-10, HI-8588PST-10 & HI-8588PSM-10 8 - PIN PLASTIC NARROW BODY SOIC

#### **SUPPLY VOLTAGES**

 $VCC = 5.0V \pm 5\%$ 

### **FUNCTION TABLE**

| 7   | ROUTB  | LOGIC OUTPUT | RECEIVER CMOS OUTPUT B |
| 8   | TESTB  | LOGIC INPUT  | CMOS                   |

#### **FUNCTIONAL DESCRIPTION**

#### **RECEIVER**

Figure 1 shows the general architecture of the ARINC 429 receiver. The receiver operates off the VCC supply only. The inputs RINA and RINB each require  $35 \mathrm{K}\Omega$  of resistance of which  $25 \mathrm{K}\Omega$  is internal to the chip. The series resistance is connected to level translators whose resistance to Ground is typically  $10 \mathrm{K}\Omega$ . In order for the voltage translation not to be adversely affected, an external  $10 \mathrm{K}\Omega$  series resister must be added to each ARINC input. The HI-8588-10 device is typically chosen for applications where external series resistors are required in its lightning protection circuitry.

After level translation, the inputs are buffered and become inputs to a differential amplifier. The amplitude of the differential signal is compared to levels derived from a divider

between VCC and Ground. The nominal settings correspond to a One/Zero amplitude of 6.0V and a Null amplitude of 3.3V.

The status of the ARINC receiver input is latched. A Null input resets the latches and a One or Zero input sets the latches.

The logic at the output is controlled by the test signal which is generated by the logical OR of the TESTA and TESTB pins. Unlike the HI-8588, if TESTA and TESTB are both One, the HI-8588-10 outputs are pulled low instead of being tri-stated. This allows the digital outputs of a transmitter to be connected to the test inputs through control logic for self-test purposes.

## **ABSOLUTE MAXIMUM RATINGS**

#### Voltages referenced to Ground

| Supply voltages VCC7V                                      |
|--|
| ARINC input - pins 3 & 4 Voltage at either pin+29V to -29V |
| DC current per input pin ±10mA                             |
| Power dissipation at 25°C plastic DIP0.7W ceramic DIP0.5W  |
| Solder Temperature275°C for 10 sec                         |
| Storage Temperature65°C to +150°C                          |

#### RECOMMENDED OPERATING CONDITIONS

| Supply Voltages VCC5V ± 5%   |  |
|--|--|
| Temperature Range Industrial Screening40°C to +85°C Hi-Temp Screening55°C to +125°C Military Screening55°C to +125°C |  |

NOTE: Stresses above absolute maximum ratings or outside recommended operating conditions may cause permanent damage to the device. These are stress ratings only. Operation at the limits is not recommended.
