### 8.5 G Fibre Channel Compliant SFP+ 1310 nm Limiting Transceiver <br> JSH-85L3Ax1-10 Series

Key Features - Compliant with 8 G Fibre Channel (FC) link specifications

- FC compatible operation at 4 and 2 G without using rate select
- Uses a highly reliable, 1310 nm distributed-feedback laser
- Lead-free and RoHS 6/6-compliant, with allowed exemptions
- Commercial case operating temperature of $0-70^{\circ} \mathrm{C}$;
extended temperature operation up to $85^{\circ} \mathrm{C}$
- Single 3.3 V power supply
- Low power consumption (typically 695 mW )
- Bit error rate $<1 \times 10^{-12}$
- Hot pluggable

## Applications

- High-speed storage area networks
- Switches and hubs
- Network interface cards
- Mass storage systems
- Host bus adapters
- Computer cluster crossconnect systems
- Custom high-bandwidth data pipes

## Compliance

- SFF 8431 Revision 3.2
- SFF 8432 Revision 5.0
- SFF 8472 Revision 10.3
- FC-PI-4 800-SM-LC-L
- CDRH and IEC60825-1 Class 1 Laser Eye Safety
- FCC Class B
- ESD Class 2 per MIL-STD 883

Method 3015

- UL 94, V0
- Reliability tested per Telcordia GR-468

The lead-free and RoHS-compliant small form factor pluggable (SFP+) transceiver from JDSU improves the performance for 8 Gigabit Fibre Channel (8GFC) applications, and is ideal for high-speed, storage area network applications. This transceiver features a highly reliable, distributed-feedback (DFB) laser coupled to an LC optical connector. The transceiver is fully compliant to the FC-PI-4 800-SM-LC-L variant and is compatible with 400-SM-LC-L and 200-SM-LC-L variants. It is fully compatible with $\mathrm{SFP}+$ specifications at $8.5 \mathrm{G}, 4.25 \mathrm{G}$ and 2.125 G bit rates, with internal AC coupling on both transmit and receive data signals. The all-metal housing design provides low EMI emissions in demanding 8.5 G applications and conforms to IPF specifications. An enhanced digital diagnostic feature set allows for real-time monitoring of transceiver performance and system stability, and the serial ID allows for customer and vendor system information to be stored in the transceiver. Transmit disable, loss-of-signal, and transmitter fault functions are also provided. The small size of the transceiver allows for high-density system designs that, in turn, enable greater total bandwidth.

## Section 1 Functional Description

The JSH-85L3Ax1-10 8.5 G SFP+ 1310 nm optical transceiver is designed to transmit and receive $8 \mathrm{~B} / 10 \mathrm{~B}$ scrambled 8.5 G serial optical data over standard single-mode optical fiber.

## Transmitter

The transmitter converts $8 \mathrm{~B} / 10 \mathrm{~B}$ scrambled serial PECL or CML electrical data into serial optical data compliant with the 800-SM-LC-L variant of the 8 G Fibre Channel standard. Transmit data lines (TD+ and TD-) are internally AC coupled, with $100 \Omega$ differential termination.

Transmitter rate select (RS1) pin 9 is assigned to control the SFP+ module transmitter rate. It is connected internally to a $30 \mathrm{k} \Omega$ pull-down resistor. A data signal on this pin does not affect the operation of the transmitter.

An open collector-compatible transmit disable (Tx_Disable) is provided. This pin is internally terminated with a $10 \mathrm{k} \Omega$ resistor to $\mathrm{V}_{\mathrm{cc}, \mathrm{T}}$. A logic " 1 ," or no connection, on this pin will disable the laser from transmitting. A logic " 0 " on this pin provides normal operation.

The transmitter has an internal PIN monitor diode that ensures constant optical power output, independent of supply voltage. It is also used to control the laser output power over temperature to ensure reliability at high temperatures.

An open collector-compatible transmit fault (Tx_Fault) is provided. The Tx_Fault signal must be pulled high on the host board for proper operation. A logic " 1 " output from this pin indicates that a transmitter fault has occurred or that the part is not fully seated and the transmitter is disabled. A logic " 0 " on this pin indicates normal operation.

## Receiver

The receiver converts $8 \mathrm{~B} / 10 \mathrm{~B}$ scrambled serial optical data into serial PECL/CML electrical data. Receive data lines (RD+ and RD-) are internally AC coupled with $100 \Omega$ differential source impedance, and must be terminated with a $100 \Omega$ differential load.

Receiver Rate Select (RS0) pin 7 is assigned to control the SFP+ module receiver rate. It is connected internally to a $30 \mathrm{k} \Omega$ pull-down resistor. A data signal on this pin has no affect on the operation of the receiver.

An open collector compatible loss of signal (LOS) is provided. The LOS must be pulled high on the host board for proper operation. A logic " 0 " indicates that light has been detected at the input to the receiver (see Optical Characteristics, Loss of Signal Assert/Deassert Time). A logic " 1 " output indicates that insufficient light has been detected for proper operation.

## Section 2 Application Schematic

Figure 2 Recommended application schematic for the $\mathbf{8}$ G SFP+ optical transceiver

Notes

- Power supply filtering components should be placed as close to the $V_{c c}$ pins of the host connector as possible for optimal performance.
* PECL driver and receiver components will require biasing networks. Please consult application notes from suppliers of these components. CML I/O on the PHY are supported. Good impedance matching for the driver and receiver is required.
** SDA and SCL should be bi-directional open collector connections in order to implement serial ID in JDSU SFP+ transceiver modules.
** R1/R2 and R3/R4 are normally included in the output and input of the PHY. Please check the application notes for the IC in use.
* Transmission lines should be $100 \Omega$ differential traces. Vias and other transmission line discontinuities should be avoided. In order to meet the host $\Delta \mathrm{T}$ output jitter and $\Delta \mathrm{R}$ jitter tolerance requirements it is recommended that the PHY has both transmitter pre-emphasis to equalize the transmitter traces and receiver equalization to equalize the receiver traces. With appropriate transmitter pre-emphasis and receiver equalization, up to 8 dB of loss at 5 GHz can be tolerated.
${ }^{* *}$ R5 and R6 are required when an Open Collector driver is used in place of CMOS or TTL drivers. $5 \mathrm{k} \Omega$ value is appropriate.
${ }^{* * *}$ The value of $\mathrm{R}_{\mathrm{p}}$ and $\mathrm{R}_{\mathrm{q}}$ depend on the capacitive loading of these lines and the two wire interface clock frequency. See SFF-8431. A value of $10 \mathrm{k} \Omega$ is appropriate for 80 pF capacitive loading at 100 kHz clock frequency.

Power supply filtering is recommended for both the transmitter and receiver. Filtering should be placed on the host assembly as close to the Vcc pins as possible for optimal performance. $\mathrm{V}_{\mathrm{cc}, \mathrm{R}}$ and $\mathrm{V}_{\mathrm{cc}, \mathrm{T}}$ should have separate filters.

Power supply filter component values from Figure 2 are shown in the table below for two different implementations.

## Power Supply Filter Component Values

| Component | Option A | Option B | Units |
| :--- | :--- | :--- | :--- |
|  |  |  |  |
| $\mathrm{L} 1, \mathrm{~L} 2$ | 1.0 | 4.7 | $\mu \mathrm{H}$ |
| $\mathrm{Rx}, \mathrm{Ry}$ | $0.5^{*}$ | $0.5^{*}$ | $\Omega$ |
| $\mathrm{C} 1, \mathrm{C} 5$ | 10 | 22 | $\mu \mathrm{~F}$ |
| $\mathrm{C} 2, \mathrm{C} 3, \mathrm{C} 4$ | 0.1 | 0.1 | $\mu \mathrm{~F}$ |
| C 6 | Not required | 22 | $\mu \mathrm{~F}$ |

Notes:
Option A is recommended for use in applications with space constraints. Power supply noise must be less than $100 \mathrm{mV}_{\mathrm{p} \text {-p }}$.
Option B is used in the module compliance board in SFF-8431.
${ }^{*}$ If the total series resistance of L1+C6 and L2+C5 exceeds the values of Rx and Ry in the table, then Rx and Ry can be omitted.

## Section 3 Specifications

Technical specifications related to the SFP+ optical transceiver include:

- Section 3.1 Pin Function Definitions
- Section 3.2 Absolute Maximum Ratings
- Section 3.3 Operating Conditions
- Section 3.4 Electrical Characteristics
- Section 3.5 Optical Characteristics
- Section 3.6 Link Length
- Section 3.7 Regulatory Compliance
- Section $3.8 \quad$ PCB Layout
- Section 3.9 Front Panel Opening
- Section 3.10 Module Outline
- Section 3.11 Transceiver Belly-to-belly Mounting

### 3.1 Pin Function Definitions

## SFP+ Optical Transceiver Pin Descriptions

| Pin Number | Symbol | Name | Description |
| :---: | :---: | :---: | :---: |
| Receiver |  |  |  |
| 8 | LOS | Loss of Signal Out (OC) | Sufficient optical signal for potential $\mathrm{BER}<1 \times 10^{-12}=$ Logic " 0 " Insufficient signal for potential $\mathrm{BER}<1 \times 10^{-12}=$ Logic " 1 " This pin is open collector compatible, and should be pulled up to Host $\mathrm{V}_{\mathrm{cc}}$ with a $10 \mathrm{k} \Omega$ resistor. |
| 10, 11, 14 | $\mathrm{V}_{\text {eer }}$ | Receiver Signal Ground | These pins should be connected to signal ground on the host board. The $V_{\text {eer }}$ and $V_{\text {eet }}$ signals are connected together within the module and are isolated from the module case. |
| 12 | RD- | Receiver Negative DATA Out | Light on = Logic "0" Output <br> Receiver DATA output is internally AC coupled and series terminated with a $50 \Omega$ resistor. |
| 13 | RD+ | Receiver Positive DATA Out | Light on = Logic " 1 " Output <br> Receiver DATA output is internally AC coupled and series terminated with a $50 \Omega$ resistor. |
| 15 | $\mathrm{V}_{\text {cck }}$ | Receiver Power Supply | This pin should be connected to a filtered +3.3 V power supply on the host board. See Application schematics on page 4 for filtering suggestions. The pin is connected inside the module to pin $16 \mathrm{~V}_{\text {cct }}$. |
| 7 | RS0 | RX Rate Select (LVTTL) | This pin has an internal $30 \mathrm{k} \Omega$ pull-down to ground. A signal on this pin will not affect module performance. |
| Transmitter |  |  |  |
| 3 | TX_Disable | Transmitter Disable In (LVTTL) | Logic " 1 " Input (or no connection) = Laser off <br> Logic " 0 " Input = Laser on <br> This pin is internally pulled up to $\mathrm{V}_{\mathrm{cc} T}$ with a $10 \mathrm{k} \Omega$ resistor. |
| 1,17,20 | $\mathrm{V}_{\text {eeT }}$ | Transmitter Signal Ground | These pins should be connected to signal ground on the host board. The $V_{\text {eer }}$ and $V_{\text {eet }}$ signals are connected together within the module and are isolated from the module case. |
| 2 | TX_Fault | Transmitter Fault Out (OC) | Logic " 1 " Output = Laser Fault (Laser off before t_fault) This pin is open collector compatible, and should be pulled up to Host Vcc with a $10 \mathrm{k} \Omega$ resistor. |
| 16 | $\mathrm{V}_{\text {ccT }}$ | Transmitter Power Supply | This pin should be connected to a filtered +3.3 V power supply on the host board. See Application schematics on page 4 for filtering suggestions. The pin is connected inside the module to pin $15 \mathrm{~V}_{\text {ccr }}$. |
| 18 | TD+ | Transmitter Positive DATA In | Logic " 1 " Input = Light on <br> Transmitter DATA inputs are internally AC coupled and terminated with a differential $100 \Omega$ resistor. |
| 19 | TD- | Transmitter Negative DATA In | Logic "0" Input = Light on <br> Transmitter DATA inputs are internally AC coupled and terminated with a differential $100 \Omega$ resistor. |
| 9 | RS1 | TX Rate Select (LVTTL) | This pin has an internal $30 \mathrm{k} \Omega$ pulldown to ground. A signal on this pin will not affect module performance. |
| Module Definition |  |  |  |
| 4 | SDA | Two-wire Serial Data | Serial ID with SFF 8472 Diagnostics. <br> Module definition pins should be pulled up to Host Vcc with appropriate resistors for the speed and capacitive loading of the bus. See SFF8431. |
| 5 | SCL | Two-wire Serial Clock | Serial ID with SFF 8472 Diagnostics. <br> Module definition pins should be pulled up to Host Vcc with appropriate resistors for the speed and capacitive loading of the bus. See SFF8431. |
| 6 | MOD_ABS | Module Absent | Pin should be pulled up to Host $V_{\mathrm{cc}}$ with $10 \mathrm{k} \Omega$ resistor. MOD_ABS is asserted "high" when the SFP+ module is physically absent from the host slot. |

| Absolute Maximum Ratings |  |  |  |
| :--- | :--- | :--- | :--- |
| 3.2 |  |  |  |
| Parameter | Symbol | Ratings | Unit |
|  |  |  | ${ }^{\circ} \mathrm{C}$ |
| Storage temperature | $\mathrm{T}_{\mathrm{ST}}$ | -40 to +95 | ${ }^{\circ} \mathrm{C}$ |
| Operating case temperature | $\mathrm{T}_{\mathrm{C}}$ | -40 to +85 | RH |
| Relative humidity | $\mathrm{V}_{\mathrm{D}}$ | 2.5 | $\mathrm{~V}_{\mathrm{P}-\mathrm{P}}$ |
| Transmitter differential input voltage | $\mathrm{V}_{\mathrm{CC}}$ | 0 to +4.0 | V |
| Power supply voltage |  |  |  |

Note:
Absolute maximum ratings represent the damage threshold of the device.
Damage may occur if the device is subjected to conditions beyond the limits stated here.

| 3.3 Operating Conditions |  |  |
| :--- | :--- | :--- |
| Part Number | Temperature Rating | Unit |
| JSH-85L3AA1-10 | $0-70$ | ${ }^{\circ} \mathrm{C}$ |
| JSH-85L3AB1-10 | $-20-85$ | ${ }^{\circ} \mathrm{C}$ |

Note:
Performance is not guaranteed and reliability is not implied for operation at any condition outside these limits.

| Sensitivity (OMA) |  | dBm OMA | - | -13.8 | - | -15.4 | - | -18.2 | - | 4GFC <br> and 2GFC |
| Loss of signal deassert level | LOSD | dBm OMA | - | -13.8 | - | -15.4 | - | -18.2 | - | $4 \mathrm{GFC}$ <br> and 2GFC |

Note: The JSH-85L3Ax1-10 transceiver is designed for operation at $8.5 \mathrm{~Gb} / \mathrm{s}$ Fibre Channel rates on single-mode fiber links up to 10 km . The transceiver will operate at $4.25 \mathrm{~Gb} / \mathrm{s}$ and $2.125 \mathrm{~Gb} / \mathrm{s}$ Fibre Channel rates.

| 3.6 Link Length |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
|  |  |  | Notes |  |
| Data Rate Standard | Fiber Type | Distance Range $(\mathbf{m})$ |  |  |
| 8.5 GBd | SMF, OS1 or OS2 | $2-10,000$ | 4 |  |

## Specification Notes

1. UI (unit interval): one UI is equal to one bit period. For example, 8.5 Gbps corresponds to a UI of 117.65 ps .
2. For LOSA and LOSD definitions, see Loss of Signal Assert/Deassert Level in Optical Characteristics.
3. Transmitter dispersion penalty (TDP) is defined by IEEE 802.3-2005 Clause 52 using a fiber with dispersion at the worst case for the specified length.
4. Distances, shown in the "Link Length" table, are calculated for worst-case fiber and transceiver characteristics based on the optical and electrical specifications shown in this document using techniques specified in IEEE 802.3. These distances are consistent with those specified for FC-PI-4.

### 3.7 Regulatory Compliance

The JSH-85L3Ax1-10 optical transceiver complies with international Electromagnetic Compatibility (EMC) and international safety requirements and standards. EMC performance is dependent on the overall system design. Information included herein is intended as a figure of merit for designers to use as a basis for design decisions.

The JSH-85L3Ax1-10 optical transceiver is lead-free and RoHS-compliant per Directive 2002/95/EC of the European Parliament and of the Council of 27 January 2003 on the restriction of the use of certain hazardous substances in electrical and electronic equipment.

| Regulatory Compliance |  |  |
| :---: | :---: | :---: |
| Feature | Test Method | Performance |
| Component safety | UL 60950 <br> UL 94, V0 <br> IEC 60950 | UL File E209897 <br> TUV Report/Certificate (CB scheme) |
| RoHS-compliant | Directive 2002/95/EC | Compliant per the Directive 2002/95/EC of the European Parliament and of the Council of 27 January 2003 on the restriction of the use of certain hazardous substances in electrical and electronic equipment. |
| Laser eye safety ${ }^{1}$ | IEC 60825-1:2007 and EN 60825-1:2007 <br> U. S. 21CFR 1040.10 | TUV Certificate <br> CDRH compliant and Class 1 laser eye safe |
| Electromagnetic Compatibility |  |  |
| Electromagnetic emissions | EMC Directive 89/336/EEC <br> FCC CFR47 Part 15 <br> IEC/CISPR 22 <br> AS/NZS CISPR22 <br> EN 55022 <br> ICES-003, Issue 4 <br> VCCI-03 | Noise frequency range: 30 MHz to 40 GHz . Good system EMI design practice required to achieve Class B margins. |
| Electromagnetic immunity | EMC Directive 89/336/EEC IEC/CISPR/24 <br> EN 55024 |  |
| ESD immunity | EN 61000-4-2 | Exceeds requirements. Withstand discharges of 4 kV contact and 8 kV air discharge to Criterion A, and 8 kV contact and 25 kV air discharge to Criterion B. |
| Radiated immunity | EN 61000-4-3 | Exceeds requirements. Field strength of $10 \mathrm{~V} / \mathrm{m}$ RMS, from 10 MHz to 1 GHz . No effect on transmitter/receiver performance is detectable between these limits. |

## Section 4 Related Information

Other information related to the SFP+ optical transceiver includes:

- Section $4.1 \quad$ Digital diagnostic monitoring and serial ID operation
- Section $4.2 \quad$ Package and handling instructions
- Section 4.3 ESD discharge (ESD)
- Section 4.4 Eye safety

### 4.1 Digital Diagnostic Monitoring and Serial ID Operation

The JSH-85L3Ax1-10 optical transceiver is equipped with a two-wire serial EEPROM that is used to store specific information about the type and identification of the transceiver as well as real-time digitized information relating to the transceiver's performance. See the Small Form Factor Committee document number SFF-8472 Revision 10.3, dated December 1, 2007 for memory/address organization of the identification data and digital diagnostic data. The enhanced digital diagnostics feature monitors five key transceiver parameters which are internally calibrated and should be read as absolute values and interpreted as follows:

Transceiver Temperature in degrees Celsius: Internally measured. Represented as a 16 bit signed two's complement value in increments of $1 / 256^{\circ} \mathrm{C}$ from -40 to $+85^{\circ} \mathrm{C}$ with LSB equal to $1 / 256^{\circ} \mathrm{C}$. Accuracy is $\pm 3^{\circ} \mathrm{C}$ over the specified operating temperature and voltage range.

Vcc/Supply Voltage in Volts:Internally measured. Represented as a 16-bit unsigned integer with the voltage defined as the full 16-bit value $(0-65535)$ with LSB equal to 100 uV with a measurement range of 0 to +6.55 V . Accuracy is $\pm$ three percent of nominal value over the specified operating temperature and voltage ranges.

TX Bias Current in mA: Represented as a 16-bit unsigned integer with current defined as the full 16 -bit value ( $0-65535$ ) with LSB equal to 2 uA with a measurement range of $0-131 \mathrm{~mA}$. Accuracy is $\pm 10$ percent of nominal value over the specified operating temperature and voltage ranges.

TX Output Power in mW: Represented as a 16-bit unsigned integer with the power defined as the full 16 -bit value $(0-65535)$ with LSB equal to 0.1 uW . Accuracy is $\pm 2 \mathrm{~dB}$ over the specified temperature, voltage, and average optical power ranges. Data is not valid when transmitter is disabled.

RX Received Optical Power in mW: Represented as average power as a 16-bit unsigned integer with the power defined as the full 16 -bit value $(0-65535)$ with LSB equal to 0.1 uW . Accuracy is $\pm 2 \mathrm{~dB}$ over the specified temperature, voltage and optical input power ranges.

## 17

## Reading the data

The information is accessed through the SCL and SDA connector pins of the module. The SFF-8431 Revision 3.2 specification contains all the timing and addressing information required for accessing the data in the EEPROM.

The device address used to read the Serial ID data is 1010000 X (A0h), and the address to read the diagnostic data is 1010001X(A2h). Any other device addresses will be ignored.

MOD_ABS, pin 6 on the transceiver, is connected to Logic 0 (Ground) on the transceiver.

SCL, pin 5 on the transceiver, is connected to the SCL pin of the EEPROM.
SDA, pin 4 on the transceiver, is connected to the SDA pin of the EEPROM.
The EEPROM Write Protect pin is internally tied to ground with no external access, allowing write access to the customer-writable field (bytes 128-247 of address 1010001 X ). Note: address bytes $0-127$ are not write protected and may cause diagnostic malfunctions if written over.

## Decoding the data

The information stored in the EEPROM, including the organization and the digital diagnostic information, is defined in the Small Form Factor Committee document SFF-8472 Revision 10.3, dated December 1, 2007.

## Data Field Descriptions

| 0 | Address( 1010000 X (A0h) |  | Address( 1010001X)(A2h) |

| $110-5$ | Reserved | Digital State of Rate Select Pin |
| $110-4$ | Rate Select State | Writing to this bit has no effect |
| $110-3$ | Soft Rate Select Control | Digital State of Tx_Fault Pin |
| $110-2$ | Tx Fault State | Digital State of Rx LOS Pin |
| $110-1$ | LOS State | Digital State; "1" until transceiver is ready |
| $110-0$ | Data Ready State | Reserved |
| 111 | Reserved | Refer to SFF-8472 Revision 10.3 |
| $112-119$ | Optional alarm \& warning flag bits (Note 2) | JDSU specific |
| $120-127$ | Vendor specific | Field writeable EEPROM |
| $128-247$ | User/Customer EEPROM | Vendor-specific control |
| $\underline{248-255}$ | Vendor specific |  |

Note :

1. During Tx disable, Tx bias and Tx power will not be monitored.
2. Alarm and warning are latched. The flag registers are cleared when the system Reads AND the alarm/warning condition no longer exists.

### 4.2 Package and Handling Instructions

This product is not compatible with any aqueous wash process.

## Process plug

The JSH-85L3Ax1-10 optical transceiver is supplied with a process plug. This plug protects the transceiver optics during standard manufacturing processes by preventing contamination from air borne particles.

Note: It is recommended that the dust cover remain in the transceiver whenever an optical fiber connector is not inserted.

## Recommended cleaning and degreasing chemicals

JDSU recommends the use of methyl, isopropyl and isobutyl alcohols for cleaning.
Do not use halogenated hydrocarbons (trichloroethane, ketones such as acetone, chloroform, ethyl acetate, MEK, methylene chloride, methylene dichloride, phenol, N -methylpyrolldone).

## Flammability

The housing is made of cast zinc and sheet metal.

### 4.3 Electrostatic Discharge (ESD)

## Handling

Normal ESD precautions are required during the handling of this module. This transceiver is shipped in ESD protective packaging. It should be removed from the packaging and handled only in an ESD protected environment utilizing standard grounded benches, floor mats, and wrist straps.

## Test and operation

In most applications, the optical connector will protrude through the system chassis and be subjected to the same ESD environment as the system. Once properly installed in the system, this transceiver should meet and exceed common ESD testing practices and fulfill system ESD requirements.

Typical of optical transceivers, this module's receiver contains a highly sensitive optical detector and amplifier which may become temporarily saturated during an ESD strike. This could result in a short burst of bit errors. Such an event may require the application to reacquire synchronization at the higher layers (serializer/deserializer chip).

### 4.4 Eye Safety

The JSH-85L3Ax1-10 Optical Transceiver is a CLASS 1 LASER PRODUCT as defined by the international standard IEC 60825-1 Second Edition 2007-03 and by U.S.A. regulations for Class 1 products per CDRH 21 CFR 1040.10 and 1040.11. Laser emissions from Class 1 laser products are not considered hazardous when operated according to product specifications. Operating the product with a power supply voltage exceeding 4.0 volts may compromise the reliability of the product, and could result in laser emissions exceeding Class 1 limits.

## Caution

Tampering with this laser based product or operating this product outside the limits of this specification may be considered an act of "manufacturing," and will require, under law, recertification of the modified product with the U.S. Food and Drug Administration (21 CFR 1040).

The use of optical instruments with this product will increase eye hazard.

## Ordering Information

For more information on this or other products and their availability, please contact your local JDSU account manager or JDSU directly at 1-800-498-JDSU (5378) in North America and $+800-5378$-JDSU worldwide, or via e-mail at customer.service@jdsu.com.

Sample: JSH-85L3AA1-10

| Part Number | Product Description |
| :--- | :--- |
| JSH-85L3AA1-10 | $8 \mathrm{G} \mathrm{SFP}+\mathrm{LW}, 1310 \mathrm{~nm} \mathrm{DFB}$, limiting electrical interface, $0-70^{\circ} \mathrm{C}, \pm 5 \%$ Vcc, no rate select, generic |
| JSH-85L3AB1-10 | $8 \mathrm{G} \mathrm{SFP}+\mathrm{LW}, 1310 \mathrm{~nm}$ DFB, limiting electrical interface, $-20-85^{\circ} \mathrm{C}, \pm 5 \%$ Vcc, no rate select, generic |

[^0]:    Note: All high frequency measurements are made with the module compliance board as described in SFF8431
