

STD2NK70Z STD2NK70Z-1

N-channel 700V - 6Ω - 1.6 A - DPAK/IPAK Zener protected SuperMESH™ Power MOSFET

General features

Туре	V _{DSS}	R _{DS(on)}	I _D	Pw
STD2NK70Z	700V	7Ω	1.6A	45W
STD2NK70Z-1	700V	7Ω	1.6A	45W

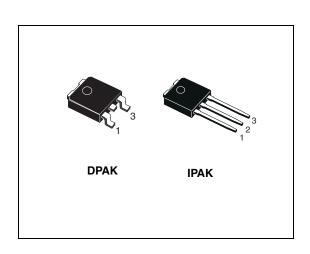

- Extremely high dv/dt capability
- ESD improved capability
- 100% avalanche tested
- New high voltage benchmark
- Gate charge minimized

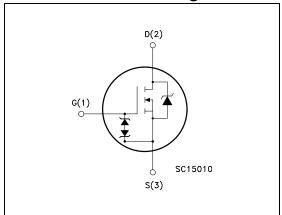

The SuperMESH™ series is obtained through an extreme optimization of ST's well established strip-based PowerMESH™ layout. In addition to pushing on-resistance significantly down, special care is taken to ensure a very good dv/dt capability for the most demanding application. Such series complements ST full range of high voltage MOSFETs including revolutionary MDmesh™ products.

1.1 Protection features of gate-to-source zener diodes

The built-in back-to-back Zener diodes have specifically been designed to enhance not only the device's ESD capability, but also to make them safely absorb possible voltage transients that may occasionally be applied from gate to source. In this respect the Zener voltage is appropriate to achieve an efficient and cost-effective intervention to protect the device's integrity. These integrated Zener diodes thus avoid the usage of external components.

4 Package mechanical data

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a Lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com
