

Monolithic, Wideband, High Slew Rate, High Output Current Buffer

The HA-5002/883 is a monolithic, wideband, high slew rate, high output current, buffer amplifier.

Utilizing the advantages of the Intersil Dielectric Isolation technologies, the HA-5002/883 current buffer offers 1300V/μs slew rate typically and 1000V/μs minimum with 110MHz of bandwidth. The ±100mA minimum output current capability is enhanced by a 3Ω output impedance.

The monolithic HA-5002/883 will replace the hybrid LH0002 with corresponding performance increases. These characteristics range from the 3MΩ (typ) input impedance to the increased output voltage swing. Monolithic design technologies have allowed a more precise buffer to be developed with more than an order of magnitude smaller gain error. The voltage gain is 0.98 guaranteed minimum with a 1kΩ load and 0.96 minimum with a 100Ω load.

The HA-5002/883 will provide many present hybrid users with a higher degree of reliability and at the same time increase overall circuit performance.

Ordering Information

PART NUMBER	PART MARKING	TEMP RANGE (°C)	PACKAGE
HA2-5002/883	HA2-5002/883	-55 to +125	8 Pin Can
HA4-5002/883	HA4-5002/883	-55 to +125	20 Ld Ceramic LCC

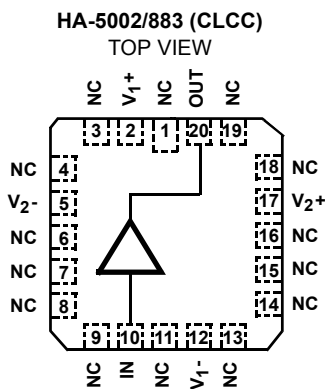

Features

- This Circuit is Processed in Accordance to MIL-STD-883 and is Fully Conformant Under the Provisions of Paragraph 1.2.1.
- Voltage Gain ($R_L = 1k\Omega$) 0.98 (Min)
0.995 (Typ)
- Voltage Gain ($R_L = 100\Omega$) 0.96 (Min)
0.971 (Typ)
- High Input Impedance 1.5MΩ (Min)
3MΩ (Typ)
- Low Output Impedance 5Ω (Max)
3Ω (Typ)
- Very High Slew Rate 1000V/μs (Min)
1300V/μs (Typ)
- Wide Small Signal Bandwidth 110MHz (Typ)
- High Output Current 100mA (Min)
- High Pulsed Output Current 400mA (Max)
- Monolithic Dielectric Isolation Construction
- Replaces Hybrid LH0002

Applications

- Line Driver
- Data Acquisition
- 110MHz Buffer
- High Power Current Booster
- High Power Current Source
- Sample and Holds
- Radar Cable Driver
- Video Products

Pinouts

Absolute Maximum Ratings

Voltage Between V+ and V- Terminals44V
 Input VoltageEqual to Supplies
 Peak Output Current (50ms On, 1s Off).....±400mA
 Junction Temperature (T_J) +175°C
 Storage Temperature Range-65°C to +150°C
 ESD Rating<4000V
 Lead Temperature (Soldering 10s) +300°C

Thermal Information

Thermal Resistance	θ_{JA} (°C/W)	θ_{JC} (°C/W)
Metal Can Package	160	70
Ceramic LCC Package	80	30
Package Power Dissipation Limit at +75°C for T _J ≤ +175°C		
Metal Can Package	.625mW	
Ceramic LCC Package	.1.25W	
Package Power Dissipation Derating Factor Above +75°C		
Metal Can Package	.6.3mW/°C	
Ceramic LCC Package	.12.5mW/°C	

Operating Conditions

Operating Temperature Range-55°C to +125°C
 Operating Supply Voltage.....±12V to ±15V
 R_L ≥ 100Ω

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTE:

1. θ_{JA} is measured with the component mounted on a low effective thermal conductivity test board in free air. See Tech Brief TB379 for details.

TABLE 1. DC ELECTRICAL PERFORMANCE CHARACTERISTICS

Device Tested at: V_{SUPPLY} = ±12V and ±15V, R_{SOURCE} = 50Ω, C_{LOAD} ≤ 10pF, V_{IN} = 0V, Unless Otherwise Specified.

NOTES:

- Parameters listed in Table 3 are controlled via design or process parameters and are not directly tested at final production. These parameters are lab characterized upon initial design release, or upon design changes. These parameters are guaranteed by characterization based upon data from multiple production runs which reflect lot to lot and within lot variation.
- Measured between 10% and 90% points.
- Quiescent Power Consumption based upon Quiescent Supply Current test maximum. (No load on outputs.)

NOTES:

1. Metallized castellations shall be connected to plane 1 terminals and extend toward plane 2 across at least two layers of ceramic or completely across all of the ceramic layers to make electrical connection with the optional plane 2 terminals.
2. Unless otherwise specified, a minimum clearance of 0.015 inch (0.38mm) shall be maintained between all metallized features (e.g., lid, castellations, terminals, thermal pads, etc.)
3. Symbol "N" is the maximum number of terminals. Symbols "ND" and "NE" are the number of terminals along the sides of length "D" and "E", respectively.
4. The required plane 1 terminals and optional plane 2 terminals (if used) shall be electrically connected.
5. The corner shape (square, notch, radius, etc.) may vary at the manufacturer's option, from that shown on the drawing.
6. Chip carriers shall be constructed of a minimum of two ceramic layers.
7. Dimension "A" controls the overall package thickness. The maximum "A" dimension is package height before being solder dipped.
8. Dimensioning and tolerancing per ANSI Y14.5M-1982.
9. Controlling dimension: INCH.
