

### 256Kx8 Static RAM CMOS, Module

PRELIMINARY  
T-46-23-14

The EDI8M8257C is a 2048K bit CMOS Static RAM based on two 128Kx8 Static RAMs mounted on a multi-layered ceramic substrate.

Functional equivalence to the monolithic two megabit Static RAM is achieved by utilization of an on-board decoder that interprets the higher order address (A17) to select one of the 128Kx8 Static RAMs.

The 32 pin DIP pinout adheres to the JEDEC standard for the two megabit device, to ensure compatibility with future monolithics.

The product is also available with Low Power and Data Retention (EDI8M8257LP).

All inputs and outputs are TTL compatible and operate from a single 5V supply. Fully asynchronous, the EDI8M8257C requires no clocks or refreshing for operation.

EDI Military Modules are built with RAMs that are compliant to MIL-STD-883, paragraph 1.2.1.
