

Technical Data Sheet

Photolink - Fiber Optic Receiver

PLR135/T

Features

- 1. High PD sensitivity optimized for red light
- 2. Data : NRZ signal
- 3. Low power consumption for extended battery life
- 4. Built-in threshold control for improved noise Margin
- 5. Good ESD protection: up to 8KV
- 6. Pb Free
- 7. Receiver sensitivity: up to -27dBm (Min. for 16Mbp up to -21dBm (Min. for 25Mbp
- 8. The product itself will remain within RoHS compliant version.

Descriptions

The optical receiver is packaged with custom optic data link interface, integrated on a proprietary CMOS PDIC process.

The unit functions by converting optical signals into electric ones.

The unit is operated at $2.4 \sim 5.5$ V and the signal output interface is TTL compatible with high performance at low power consumption.

Applications

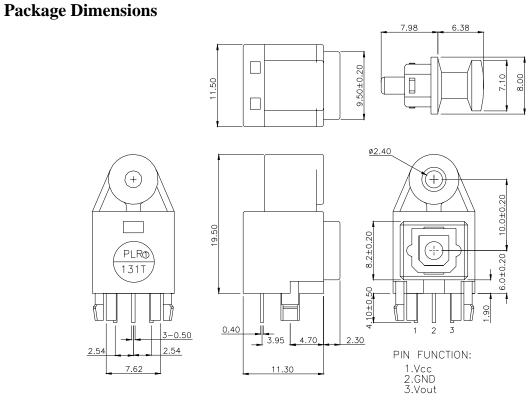

- 1. Digital Optical Data-Link
- 2. Dolby AC-3 Digital Audio Interface

Application Notes: PLR135 Series PCB layout for motherboard integration

To achieve better jitter and low input optical power performances, several PCB layout guidelines must be followed. These guidelines ensure the most reliable PLR135 POF performance for the motherboard integration. Failed to implement these PCB guidelines may affect the PLR135 jitter and low input power performances.

- 1. Careful decoupling of the power supplies is very important. Place a 0.1uf surface mount (size 805 or smaller) capacitor as close as (less than 2cm) to the POF Vdd and Gnd leads. The 0.1uf act as a low impedance path to ground for any stray high frequency transient noises.
- 2. To reduce the digital noises form the digital IC on the motherboard, the planar capacitance formed by an isolated Vcc and Gnd planes is critical. The POF device must be mounted directly on these two planes to reduce the lead parasitic inductance.
- 3. The isolated Vdd and Gnd planes must be connected to the main Vcc and Gnd (digital) planes at a single point using ferrite beads. The beads are used to block the high frequency noises from the digital planes while still allowing the DC connections between the planes
