

Radiation Hardened Octal Bus Transceiver, Three-State, Non-Inverting

Intersil's Satellite Applications Flow™ (SAF) devices are fully tested and guaranteed to 100kRAD total dose. These QML Class T devices are processed to a standard flow intended to meet the cost and shorter lead-time needs of large volume satellite manufacturers, while maintaining a high level of reliability.

The Intersil HCTS245T is a Radiation Hardened Non-Inverting Octal Bidirectional Bus Transceiver, Three-State, intended for two-way asynchronous communication between data busses. The HCTS245T allows data transmission from the A bus to the B bus or from the B bus to the A bus. The logic level at the direction input (DIR) determines the data direction. The output enable input (OE) puts the I/O port in the high-impedance state when high.

Specifications

Specifications for Rad Hard QML devices are controlled by the Defense Supply Center in Columbus (DSCC). The SMD numbers listed below must be used when ordering.

Detailed Electrical Specifications for the HCTS245T are contained in SMD 5962-95745. A "hot-link" is provided from our website for downloading.

TRUTH TABLE

| CONTROL INPUTS | | OPERATION |
|-----------------|-----|-----------------|
| \overline{OE} | DIR | |
| L | L | B Data to A Bus |
| L | H | A Data to B Bus |
| H | X | Isolation |

H = High Voltage Level, L = Low Voltage Level,
X = Immaterial

To prevent excess currents in the High-Z (Isolation) modes, all I/O terminals should be terminated with 10kΩ to 1MΩ resistors.
