

## ■ General Description

The AME5110 family of Fixed Frequency, High Efficiency, Synchronous Buck, DC-DC Converters, apply the latest innovations in Current-Mode Technology. Available in SOT-25 package, these devices are typically twice as efficient as standard LDO's, making them well suited for most portable applications.

The AME5110 is simple to use. As with standard LDO's, (1) Input, and (1) Output capacitor are required. The only other element is a small, low cost, 2.2µH inductor. The AME5110 is available with fixed output voltages of 1.5V and 1.8V, or adjustable at 600mA. Using a proprietary "Extreme Green" Technology, battery life is maximized with Frequency Foldback at light Load, and 100% duty when  $V_{in}$  approaches  $V_{out}$ .

## ■ Features

- High Efficiency "Extreme Green"
- 2.5V to 5.5V Input
- Short Circuit Protection
- Over-Temperature Shutdown
- Under-Voltage Lockout
- Superb Transient Response
- All AME's Lead Free Products Meet RoHS Standards

## ■ Applications

**■ Pin Description**

Pin Number		Pin Name	Pin Description
AME5110AEEVxxx	AME5110BEEVADJ		
1	1	EN	Enable Control Input. Forcing this pin above 1.5V enables the part. Forcing this pin below 0.3V shuts down the device. In shutdown, all functions are disabled drawing <math><1\mu A</math> supply current. Do not leave EN floating.
2	2	GND	Ground Pin
3	3	SW	Switch Node Connection to Inductor. This pin connects to the drains of the internal main and synchronous power MOSFET switches.
4	4	$V_{IN}$	Main Supply Pin. Must be closely decoupled to GND, Pin2, with a 2.2 $\mu F$ or greater ceramic capacitor.
N/A	5	$V_{FB}$	Feedback Pin. Receives the feedback voltage from an external resistive divider across the output.
5	N/A	$V_{OUT}$	Output Voltage for fixed version
