NOTES

¹ $V_{AA} = +4.75\text{ V to }+5.25\text{ V}$, $V_{REF} = 1.235\text{ V}$, $R_{SET} = 280\ \Omega$, I_{SYNC} connected to IOG, unless otherwise specified.

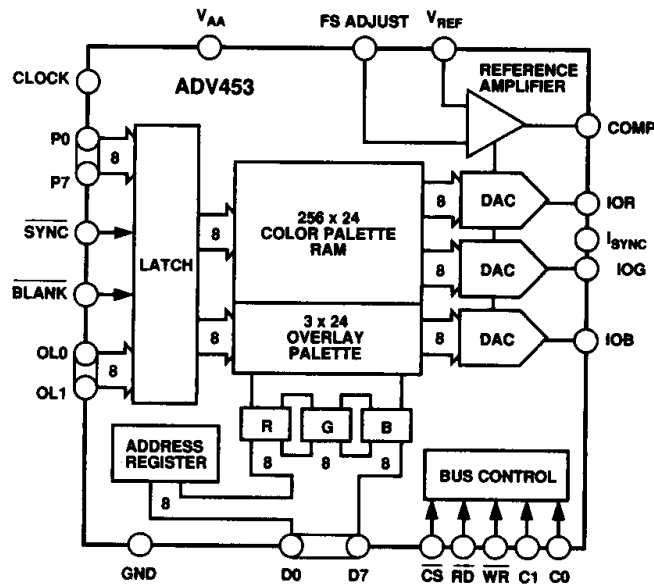

²Tested on initial release and after any redesign which may affect this parameter.

³These tests are done on a pass/fail basis only. Minimum and/or maximum conditions (as appropriate) are used as input conditions.

⁴Digital input values are 0 to 3 V, with input rise/fall time, < 3 ns measured between the 10% and 90% points. Timing reference points are at 50% for inputs and outputs. See Figure 1.
