Two-Output Power Amplifier

Overview

The LA6516 is a two-output power amplifier developed for use in both consumer and industrial equipment.

Functions

- High slew rate (1.0 V/μs)
- High output current (I_O max = 1.0 A)
- Current limiter function
- Wide operating voltage range (±2 to 18 V)
- Supports single-voltage power supply operation (4 to 36 V)
- Thermal shutdown function
- Muting circuit (Functions for both channels; when the mute input is high the output will be on.)
