

DESCRIPTION

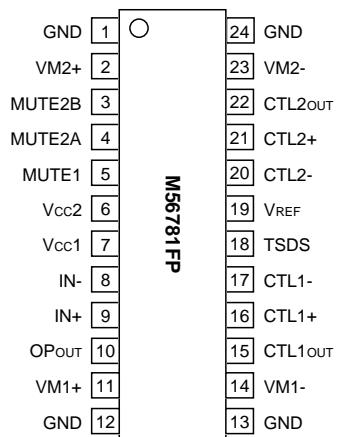

The M56781FP is a semiconductor IC developed as the motor driver used DVD, DVD-ROM, CD-ROM and CD Player.
 This device include 2 channel BTL drivers and can drive 2 actuators with one IC at the same time.
 Also, the mute circuit, thermal protection circuit and VREF voltage monitor circuit functions are included.

FEATURES

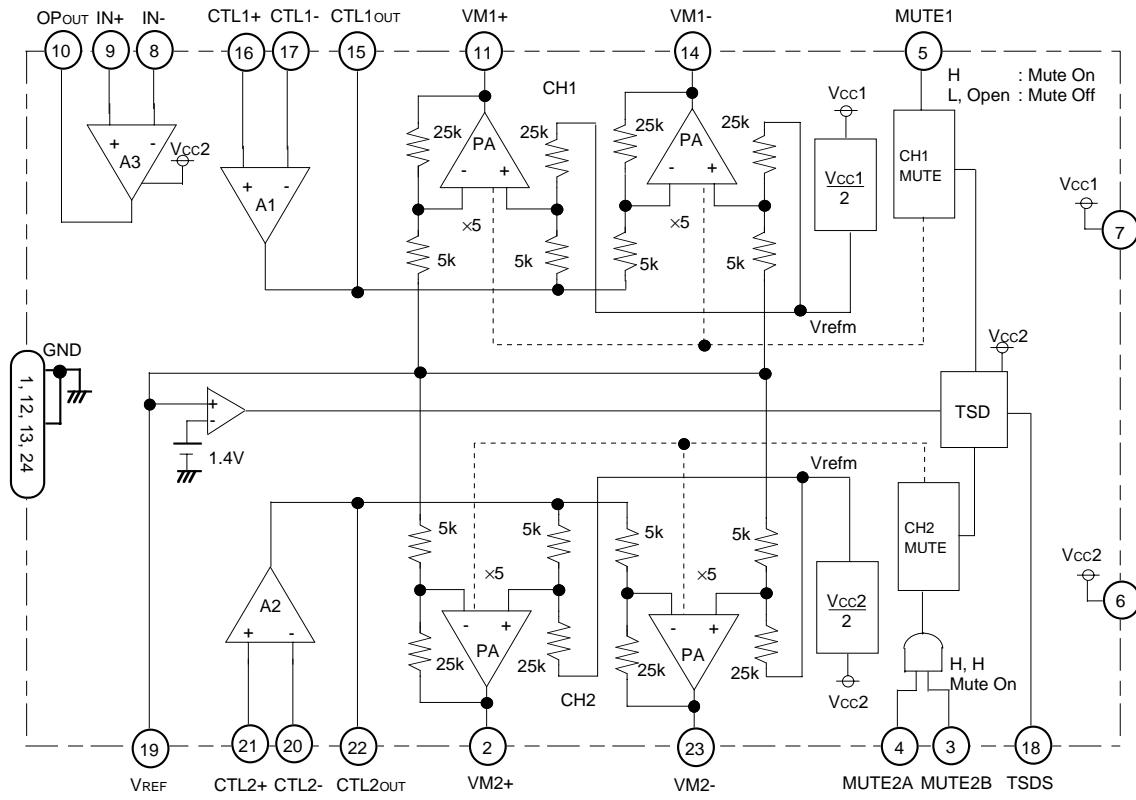

- Low output saturation voltage (typ. 1.35V at 0.5A).
- Wide operating supply voltage range (4.5 – 15V).
- High current drive capability (maximum 0.9A).
- Low crossover distortion.
- High frequency capability.

APPLICATION

DVD, DVD-ROM, CD-ROM, CD-PLAYER
