Micro-actuator Driver

General Specifications

11-MD311 is a micro-actuator driver IC with miniature package. It is one channel low voltage bi-directional motor driver IC. The design is optimal for driving different type micro-actuator, such as voice coil motor, piezo-actuator, or other dc motor actuators. It is suitable for camera module application or other portable device.

Features and Benefits

- ◆ Low voltage operation ($V_{DD\ Min} = 1.8\ V$)
- ◆ Low input current
- ◆ Zero standby current
- ◆ High frequency switch (1MHz)
- ◆ Thin, small package (LFCSP6)

Application Notes

- The O1/O2 output H/H or L/L will brake the motor. Though the active current of driver is near to zero, if the application is required to turn off driver, please turn off the driver's power from VDD.
- The capacitor connected between the output nodes O1/O2 will reduce the noise generating by motor when the motor is switched to opposed direction.
