

HD75153

Quadruple Differential Line Drivers With 3 State Outputs

HD75153 features line drivers which satisfy the requirements of EIA RS 422 A and Federal Standard 1020. This device is designed to provide differential signals with high current capability on bus lines. The circuit provides strobe and enable inputs to control all four drivers. The output circuit has active pull up and pull down and is capable of sinking or sourcing 40 mA.

Function Table

Input			Output	
Enable CC	Strobe S	Data A	Y	Z
L	X	X	Z	Z
H	L	X	L	H
H	X	L	L	H
H	H	H	H	L

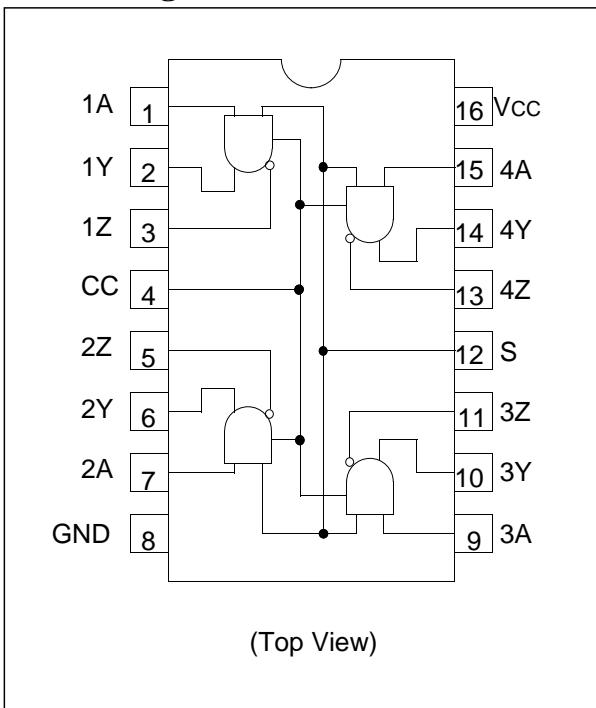

H : High level

L : Low level

X : Irrelevant

Z : High impedance

Absolute Maximum Ratings

Item	Symbol	Rating	Unit
Supply Voltage	Vcc	7	V
Input Voltage	VIN	5.5	V
Power Dissipation (Ta = 25 °C)	PT	DP FP	1000 785 mW
Operating Temperature Range	Topr	0 to +70	°C
Storage Temperature Range	Tstg	-60 to +150	°C

Note: 1. The above date were taken by the ΔV_{BE} method, mounting on a glass epoxy board (40 \times 40 \times 1.6 mm) of 10 % wiring density.

2. The absolute maximum ratings are values which must not individually be exceeded, and furthermore, no two of which may be realized at the same time.

Notes: 1. All typical values are at V_{CC} = 5 V, Ta = 25°C.

Δ|V_{OD}| and Δ|V_{OC}| are the changes in magnitudes of V_{OD} and V_{OC}, respectively, that occur when the input is changed from a high level to a low level.

2. In EIA standard RS-422A, V_{OC}, which is the average of the two output voltages with respect to ground, is called output offset voltage, V_{OS}.
3. Only one output should be shorted at a time, and duration of the short circuit should not exceed one second.
4. Differential and common mode output voltages.
