SWITCHING N-CHANNEL POWER MOS FET INDUSTRIAL USE

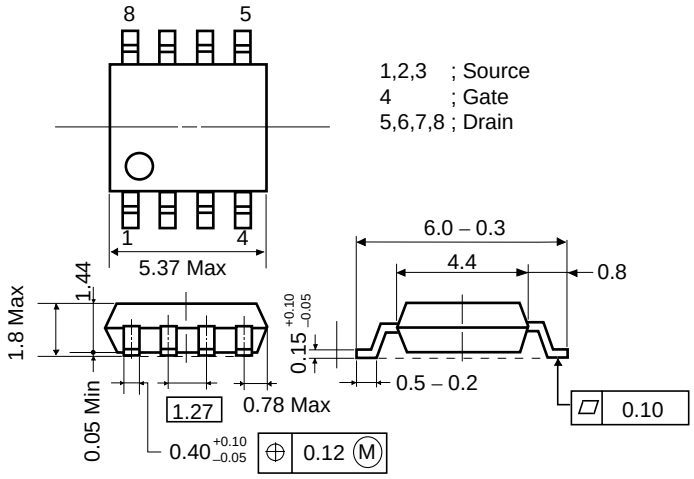
DESCRIPTION

This product is N-Channel MOS Field Effect Transistor designed for power management applications of note book computers, and Li-ion battery applications.

FEATURES

- 2.5 V Gate Drive and Low On-Resistance
  $R_{DS(on)1}$ = 27 mΩ Max. (V_{GS} = 4.0 V, I_D = 3.5 A)
  $R_{DS(on)2}$ = 40 mΩ Max. (V_{GS} = 2.5 V, I_D = 3.5 A)
- Low C_{iss} C_{iss} = 1200 pF Typ.
- Built-in G-S Protection Diode
- Small and Surface Mount Package (Power SOP8)

PACKAGE DIMENSIONS (in millimeter)

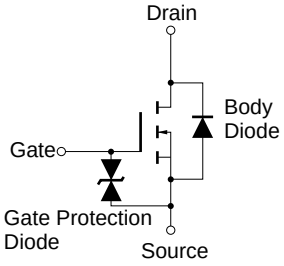


ABSOLUTE MAXIMUM RATINGS (T_A = 25 °C, All terminals are connected)

Drain to Source Voltage	V_{DSS}	20	V
Gate to Source Voltage	V_{GSS}	±12	V
Drain Current (DC)	$I_{D(DC)}$	±7.0	A
Drain Current (pulse)*	$I_{D(pulse)}$	±28	A
Total Power Dissipation (T_a = 25 °C)**	P_T	2.0	W
Channel Temperature	T_{ch}	150	°C
Storage Temperature	T_{stg}	–55 ~ +150	°C

* PW ≤ 10 μs, Duty Cycle ≤ 1 %

** Mounted on ceramic substrate of 1200 mm² × 0.7 mm



The diode connected between the gate and source of the transistor serves as a protector against ESD. When this device actually used, an additional protection circuit is externally required if voltage exceeding the rated voltage may be applied to this device.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customer must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.

NEC devices are classified into the following three quality grades:

"Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.

- Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots
- Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)
- Specific: Aircrafts, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.

The quality grade of NEC devices in "Standard" unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact NEC Sales Representative in advance.

Anti-radioactive design is not implemented in this product.
