

FEATURES

- Extremely Low supply current ($<1\mu\text{A}$).
- Shunt operation hence distortion free.
- Instantaneous. Power-up and Power-down muting.
- No external microcontroller signal needed.
- ESD protected outputs.
- 1.5V to 5V supply operation.
- Handle up to 3.5V RMS signal.
- Compact 2 x 2 x 0.8mm 6L DFN.
- Standard 8L SO-8 package.

APPLICATIONS

- Cell phones
- PDA's
- Portable DVD players
- Portable MP3 players
- Notebook Audio
- Set-top boxes
- Digital Video Recorders
- LCD TVs
- Home Theater systems

Pin Layout and Description

Pin# DFN-6	Pin # SOIC-8	Description	Notes
1	1	RCS	Power ON delay capacitor
2	2	GND	Ground
	3	NC	No Connect
3	4	Ch2	Channel 2 control signal
4	5	Ch1	Channel 1 control signal
	6	NC	No Connect
5	7	Vcc	Vcc
6	8	Cap	Holding capacitor

GENERAL DESCRIPTION

PA4220 is a low power ($I_{CC} < 1\mu\text{A}$) monolithic mixed signal device. PA4220's function is to control the power supply transition noise in audio systems. PA4220 boasts several features that make it a "one of a kind" product on the market. Most prominent is the feature is that it does not require any external signal to suppress POPUP and SHUTDOWN Noise.

PA4220 requires few external components for its operation, working from low to medium supply voltages of up to 5V. The ramp time of the supply should be greater than 50ms.

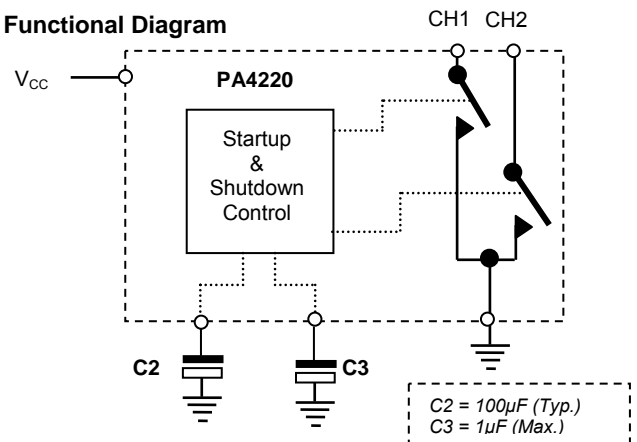

On power-up and power-down the output of the amplifier stage is switched to a convenient low impedance voltage rail hence muting the amplifiers, preventing the audible pop, which is normally heard in the headset or speakers.

PA4220 operates as a passive shunt device hence the designer does not have to worry about the device introducing any kind of noise or distortion into the system. It has extremely low current consumption ($<1\mu\text{A}$).

PA4220 is equipped with ESD (Human Body Model) protection circuitry on the outputs.

PA4220 is available as an 6L low profile 0.8mm DFN package and 8L SO-8 package. It is specified for operation over the -40°C to $+85^{\circ}\text{C}$ temperature range.

Functional Diagram

Ordering Information

Temp Range	Package	Part Number
-40 to +85°C	SOIC-8	PA4220DQ-T7
	DFN-6	PA4220DN-T7

ABSOLUTE MAXIMUM RATINGS

(All Voltages are referenced to GND)

V_{CC}+6V
 Continuous Current (IN₊, OUT₋).....±150mA
 Continuous Current (All Other Pins)±20mA
 Continuous Power Dissipation (T_A = +70°C)

Operating Temperature Range-40°C to +85°C
 Storage Temperature Range-65°C to +150°C
 Junction Temperature+150°C
 Lead Temperature (soldering, 10s)+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

RECOMMENDED OPERATING CONDITIONS:

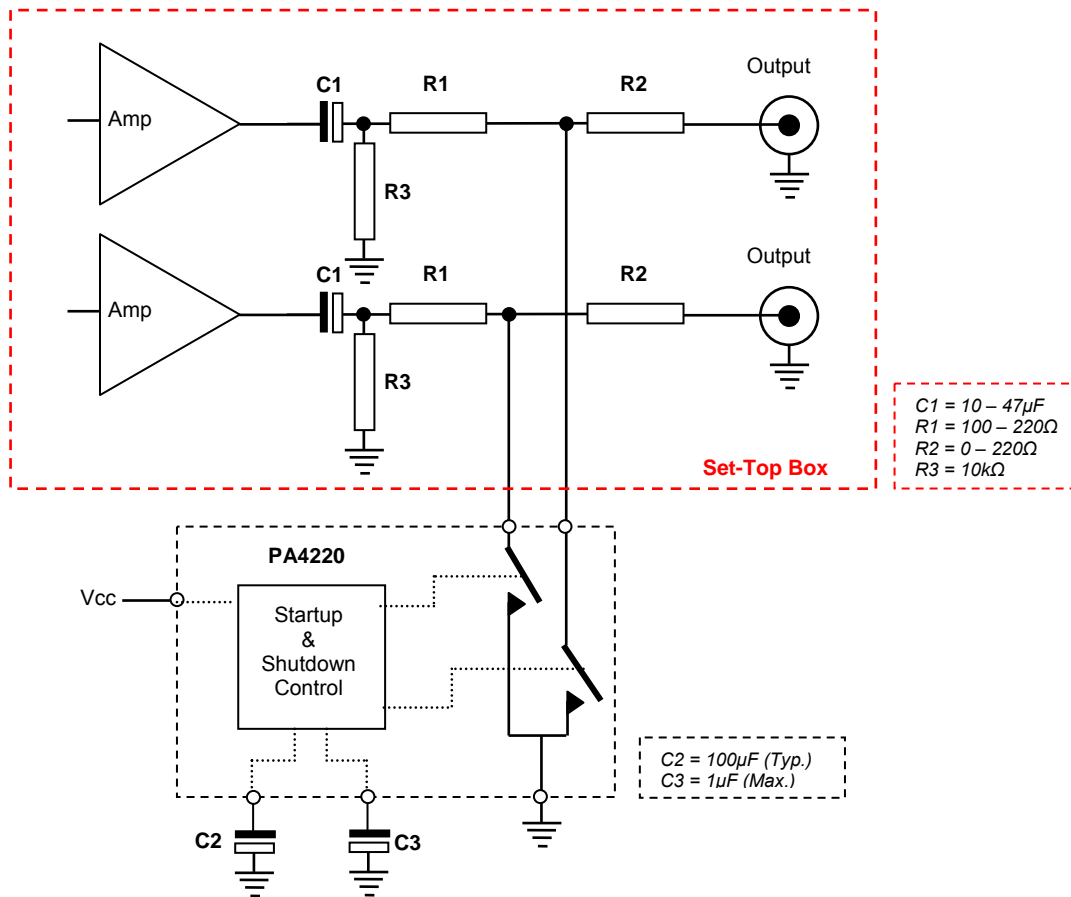

DC OPERATING CONDITIONS

Unless otherwise specified, V_{DD}=5 ± 10%, T_A = Ambient Temperature = 25 °C.

Symbol	Parameter	Condition	Limit			Unit
			Min	Typical	Max	
V _{DD}	Power Supply	Normal Operation	2.3		5.0	V
I _{DD}	Supply Current	Normal Operation			1	µA
T _A	Ambient Temperature	Normal Operation	-40		85	°C
V _{OH}	Logic High O/P Voltage	I _{OH} =100µA	V _{DD} -0.1			V
V _{OL}	Logic Low O/P Voltage	I _{OL} =-100µA			0.2	V
V _{IH}	Logic High I/P Voltage	I _{IH} =1µA	V _{DD} -0.3			V
V _{IL}	Logic Low I/P Voltage	I _{IL} =1µA			0.3	V
R _{ON}	Switch ON Resistance	V _{DD} =5V		3	4	Ω
THD	Total Harmonic Distortion	R _L = 32 Ω, 30mW, f = 1kHz		.020		%
V _{SIG}	Analog Signal Range	Normal Operation			3.5	V _{RMS}

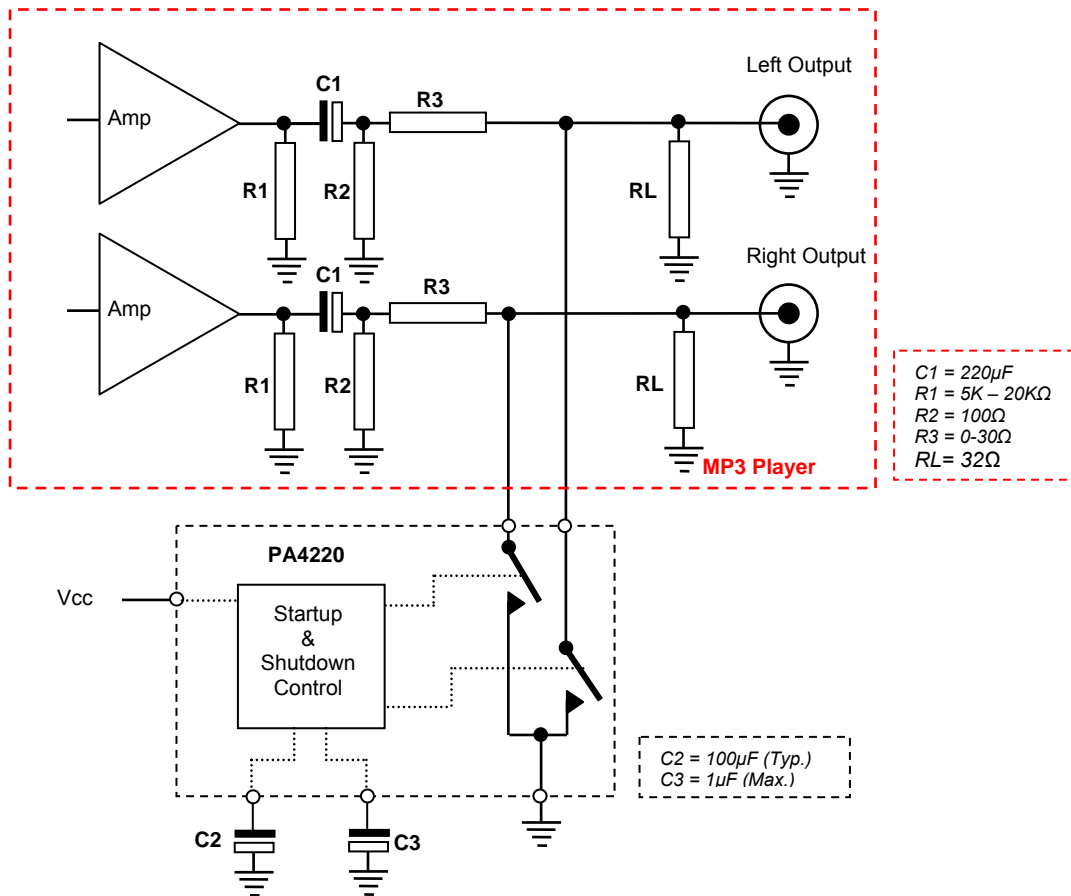

Typical Applications

THEORY OF OPERATION

STARTUP

During Startup, the Power supply ramps from 0V to V_{CC} . It is critical that this rise time be around 50ms for the PA4220 to perform well. This sudden rise in V_{CC} causes the DC Blocking Capacitor to charge and thereby the pop up noise. The PA4220 senses this sudden change in voltage and clamps the output line to a low impedance state and suppresses the Pop noise.

The capacitor at the R_{CS} pin determines the time for which the line can be kept in low impedance state during startup after which the switch is released and normal operation is started.

SHUTDOWN

During Shutdown, the reverse process happens. As the power supply reaches the threshold on its way down, the PA4220 turns the internal switches ON and hence clamping the output stage to low impedance state suppressing the shutdown noise. This operation is governed by the charge stored in the capacitor connected to V_{CAP} pin.

NOTES

1. Dimensioning and tolerances per ANSI Y14.5M, 1982.
2. Dimensions are exclusive of mold flash and metal burrs.

TAPE & REEL/BULK ORDERING NOMENCLATURE

1. Surface mount product is taped and reeled in accordance with EIA-481.
2. Suffix-T7 = 7 Inch Reel - 3,000 pieces per 12mm tape.
3. Suffix-T13 = 13 Inch Reel - 5000 pieces per 12mm tape.

Outline & Dimensions: Rev 1 - 11/01, 06009
