MITSUBISHI ICs (AV COMMON)

M52797SP/FP

AV SWITCH with I2C BUS CONTROL

DESCRIPTION

The M52797 is AV switch semiconductor integrated circuit with I2C bus control .

This IC contains 1-channel of 4-input audio switches and 1-channel of 4-input video switches. Each audio switches and video switches can be controled independently .

The video switches contain amplifiers can be controled a gain of output 0dB or 6dB .

FEATURES

- Video and stereo sound switches in one package
- Wide frequency range (video switch).....DC~20MHz
- High separation (video switch)
.....Crosstalk -60dB (typ.) at 1MHz
- Two types of packages are provided : SDIP with a lead pitch of 1.778mm (M52797SP) ; and SOP with a lead pitch of 1.27mm (M52797FP) .

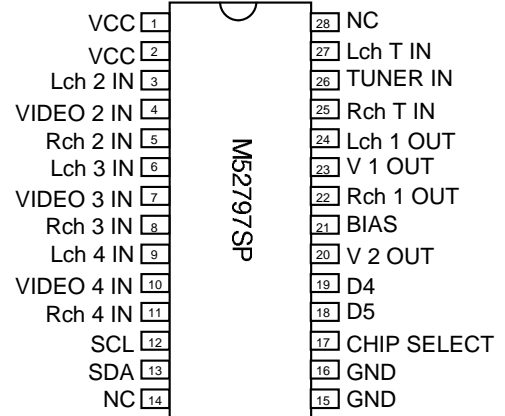

APPLICATION

Video equipment

RECOMMENDED OPERATING CONDITION

Supply voltage	4.7V~9.3V
Rated supply voltage	5V,9V
Maximum output current	24mA(at 9V)

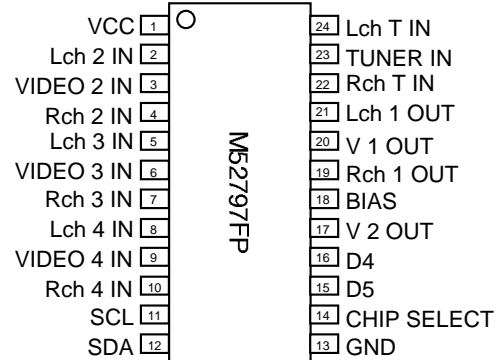

PIN CONFIGURATION (TOP VIEW)

Outline 28P4B
(Lead pitch :1.778mm)

NC: No connection

M52797SP/FP

AV SWITCH with I2C BUS CONTROL

I²C BUS

I²C BUS (Inter IC BUS) is multi master bus system developed by PHILIPS. Two wires (SDA - serial data, SCL - serial clock) realize functions of start, stop, transferring data, synchronization and arbitration. The output stages of device connected to the bus must have an open drain or open collector in order to perform the wired-AND function.

S ; Start condition, a high to low transition of the SDA line while SCL is high
P ; Stop condition, a low to high transition of the SDA line while SCL is high
A ; Acknowledge

Every byte put on the SDA line must be 8-bits long. Each byte has to be followed by an acknowledge bit. Data is transferred with the most significant bit (MSB) first. The data on the SDA line must be stable during the HIGH period of the clock. The HIGH or LOW state of the data line can only change when the clock signal on the SCL line is LOW.

CONTROL

This IC controls channel switches with 1-byte data (DATA1).

S : Start
A : Acknowledge
P : Stop

I²C BUS CONTROL SIGNAL

PRELIMINARY

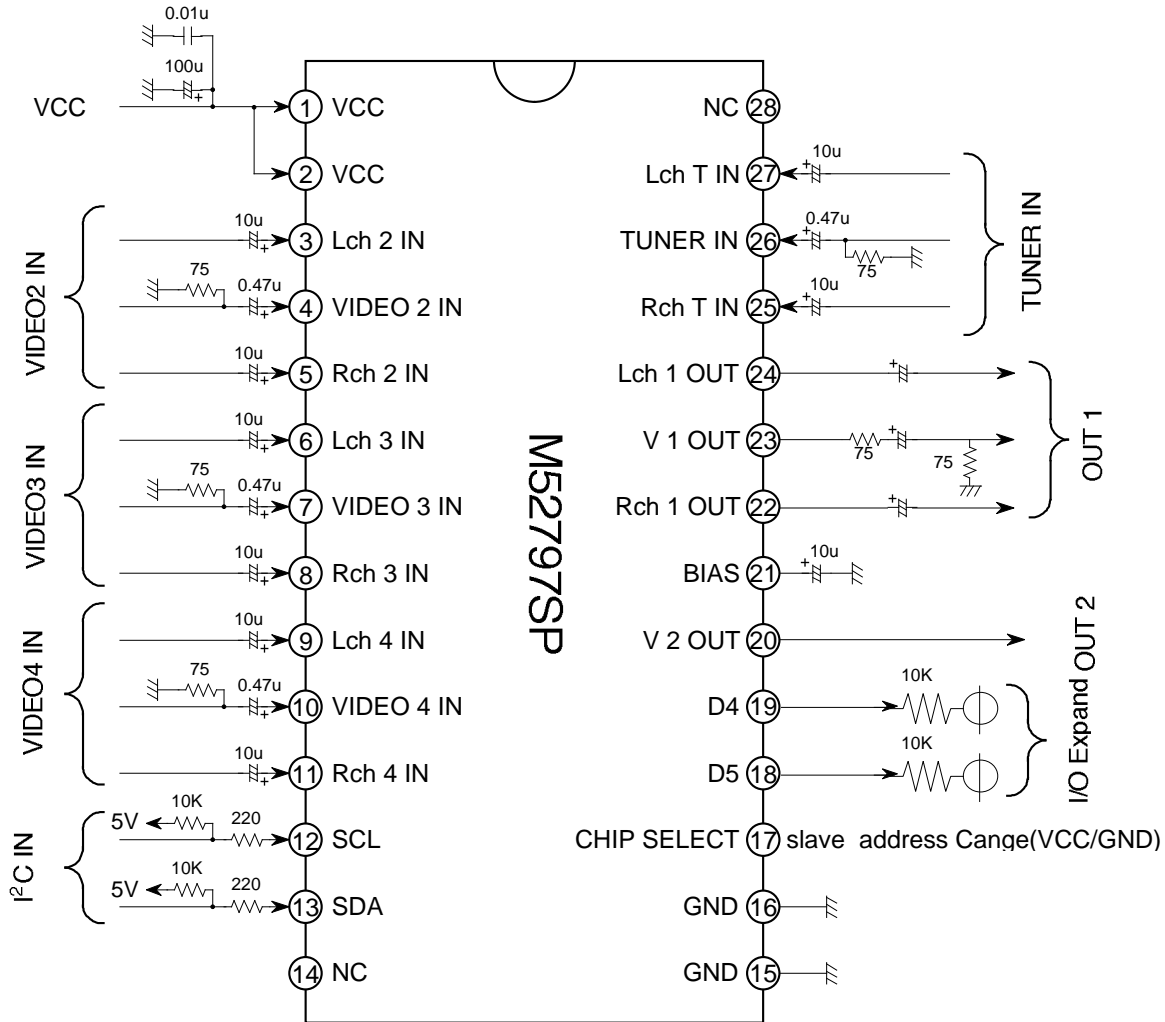

Notice. This is not a final specification.
Some parametric limits are subject to change.

MITSUBISHI ICs (AV COMMON)

M52797SP/FP

AV SWITCH with I2C BUS CONTROL

Application Circuit Example

(at 28P4B)

Note how to use this IC

Input signal with sufficient low impedance to input terminal.

The capacitance of output terminal as small as possible.

Set the capacitance between Vcc and GND near the pins if possible.

Assign an area as large as possible for grounding.

Power-on Reset

The M52797 has an internal power-on reset function that sets each control register to "0" during IC power ON.

The power-on reset V_{TH} has 2.5V.
