

TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT SILICON MONOLITHIC

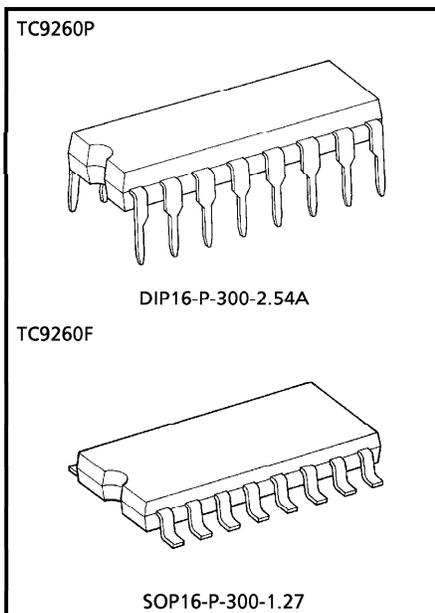

# TC9260P, TC9260F

## ELECTRONIC VOLUME

The TC9260P and TC9260F are an optimum CMOS which has been designed for electronization of volume control of audio equipment, etc.

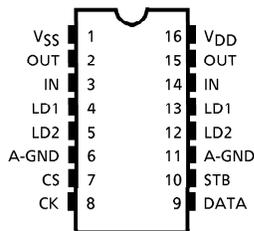

### FEATURES

- Attenuation can be controlled from 0dB to -78dB by 2dB / step.
- This ICs feature a built-in loudness circuit. (20dB tap)
- The volume, balance and loudness circuits can be controlled by serial data.
- Chip select input allows control of up to 2 of these chip on the same bus.
- Polysilicon resistors enables low-distortion, high-performance volume system.
- Package is DIP16 and SOP16.

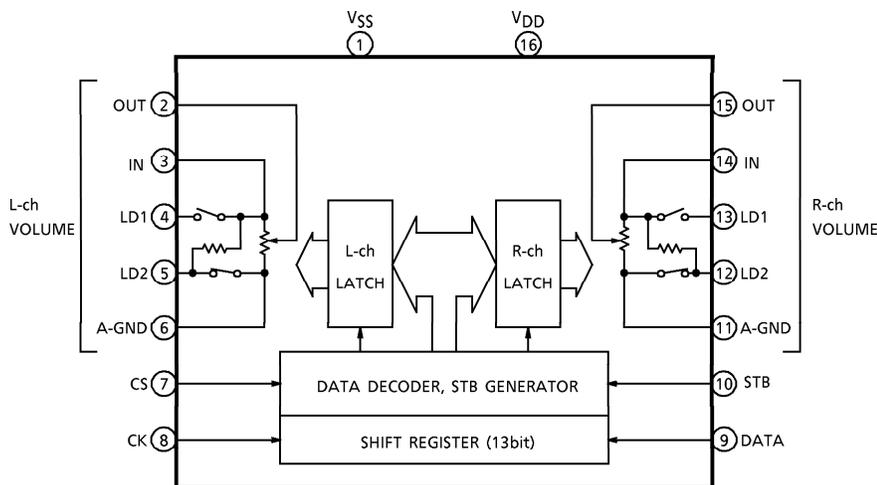

Weight  
 DIP16-P-300-2.54A : 1.0g (Typ.)  
 SOP16-P-300-1.27 : 0.16g (Typ.)

 ● TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.

**OPERATION**

1. Volume circuit

Volume circuit consist of ladder resistor and analog switch.

Tap for loudness is connected to step 10 (20dB). Loudness operation is controlled by LS1 / LS2 switches.

- Loudness ON : LS1 = ON, LS2 = OFF
- Loudness OFF : LS1 = OFF, LS2 = ON

2. Setting volume values

Optional attenuation data is input through the DATA, CK and STB terminals.  
Data consists of 18 bits as follows.

(1) Serial data format

(2) Chip select code (C1~C4)

Chip select code is set to use serial bus line in common with other ICs.  
Data C2, C3, C4 is fixed 0, 1, 1 in TC9260P, TC9260F.

When level of CS input pin (7pin) correspond to C1 bit, data is valid.

CS	C1	C2	C3	C4
"1"	1	0	1	1
"0"	0	0	1	1

Fixed

(3) L is left-channel select data ; R is right-channel select data. (L/R)

When L = 1, left-channel volume is set ; when R = 1, right-channel volume is set.  
(When R = L = 1, both channel volume are set simultaneously).

(4) LD is loudness setting data

When LD = "0", loudness is OFF (LS1 = OFF, LS2 = ON)

When LD = "1", loudness is ON (LS1 = ON, LS2 = OFF)

(5) Volume setting data (D1~D6)

TEST CIRCUIT 1

APPLICATION CIRCUIT

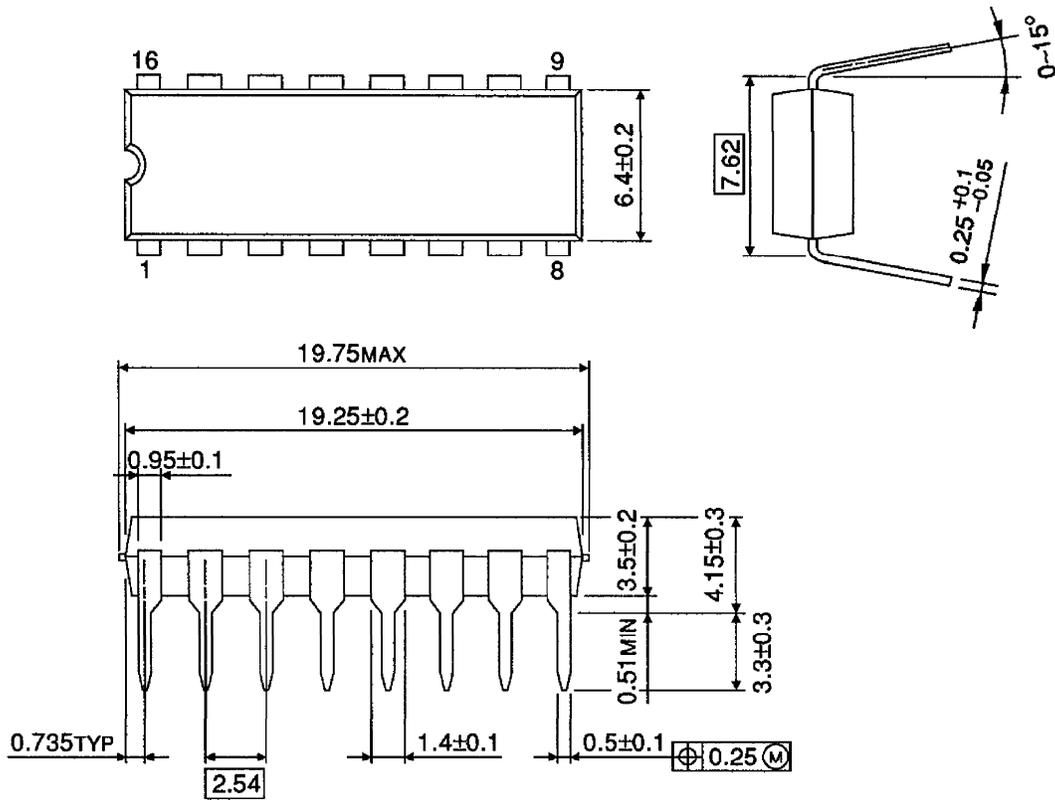

- (Note)
- L-ch circuit is loudness operation, R-ch circuit is without loudness.  
 $R_1 = 8.2k\Omega$ ,  $C_1 = 1500pF$ ,  $C_2 = 0.1\mu F$
  - For preventing noise when loudness is turned on or off.  $R = 220k\Omega \sim 470k\Omega$
  - High-frequency digital signals are input to pins CK, DATA and STB. Since these signals may cause noise in analog circuits, either use shield wire for CK, DATA, and STB signal lines, or design the pattern so that these signal lines are protected by the ground line.
