### Description

M/A-COM's MD54-0003 is a passive mixer that achieves the performance of a double balanced diode mixer in a low cost surface mount plastic SOIC-8 lead package. The MD54-0003 is ideally suited for use where high level RF signals and very dynamic range are required. applications include frequency up/down conversion, modulation, demodulation in systems such as base station receivers and transmitters for DCS1800, PCS and PHS applications.

The MD54-0003 uses FETs as mixing elements to achieve very wide dynamic range in a low cost plastic package. The mixer operates with LO drive levels of +11 dBm to +23 dBm. No DC bias is required.

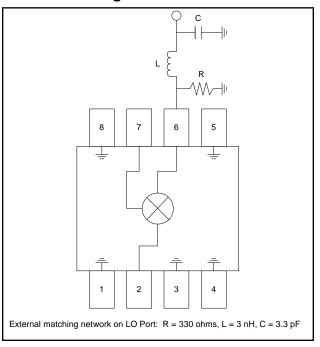

M/A-COM's MD54-0003 is fabricated using a mature 1-micron GaAs process. The process features full IC passivation for increased performance reliability.

## **Handling Procedures**

Please observe the following precautions to avoid damage:

### **Static Sensitivity**

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

The spurious table shows the spurious signals resulting from the mixing of the RF and LO input signals, assuming down conversion. Mixing products are indicated by the number of dB below the conversion loss. The lower frequency mixing term is shown for two different RF input levels. The top number is for an RF input power of -5 dBm, the lower number is for -15 dBm.

 $|mF_{RF} - nF_{LO}|$ , RF = -5 dBm  $|mF_{RF} - nF_{LO}|$ , RF = -15 dBm RF Frequency = 1850 MHz LO Frequency = 1710 MHz
