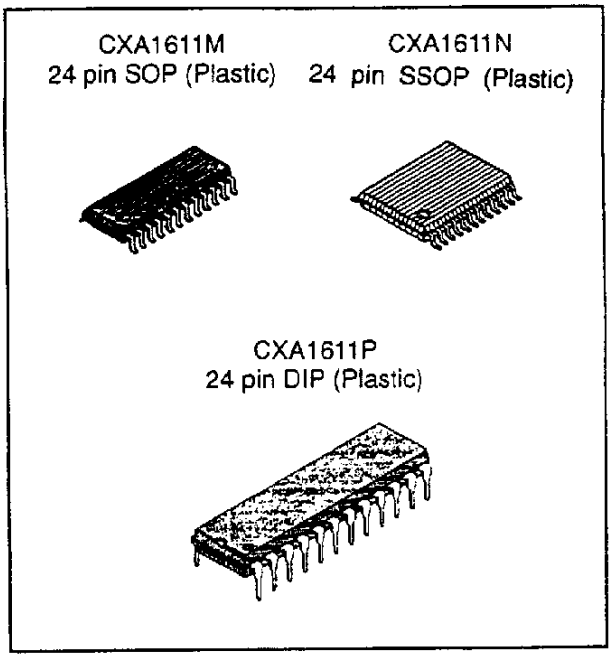
CXA1611M/N/P

FM/AM Radio

For the availability of this product, please contact the sales office.



Description

CXA1611M/N/P is an IC designed for use in FM/AM radios, integrating all necessary functions from the front end detector stage of a radio.

Features

- Wide application range as it contains functions from the front end to detector stage.
- Operable for wide range of power supply voltages. (Vcc=2 to 9V)
- Low current consumption.
  (For FM, I_D=6.0mA, for AM, I_D=4.0mA, at Vcc=6V)
- Self-contained LED drive circuit for tuning.
- Self-contained FM band signal output circuit.
- Variable capacitance diode for FM AFC.
- Low distortion factor (0.1% Typ.) for FM detection output.
- AM IF output pin which can be adapted for the AM stereo.
- Needs few peripheral parts. Due to its small size, a high density packaging design is possible.

Structure

Bipolar silicon monolithic IC

Absolute Maximum Ratings (Ta=25°C)

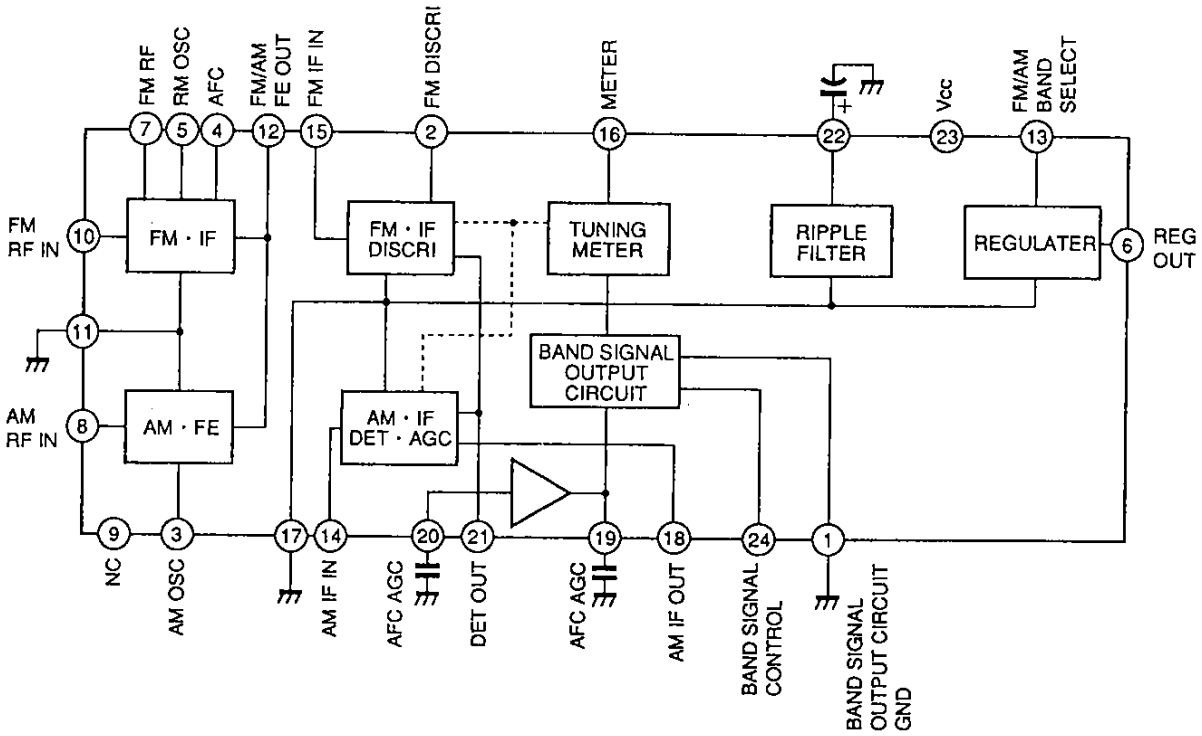
· Supply voltage	Vcc	14	V
· Operating temperature	Topr	−20 to +75	°C
· Storage temperature	Tstg	−55 to +150	°C
· Allowable power dissipation	P_D	800 (DIP)	mW
		500 (SOP)	mW
		250 (SSOP)	mW

Recommended Operating Condition

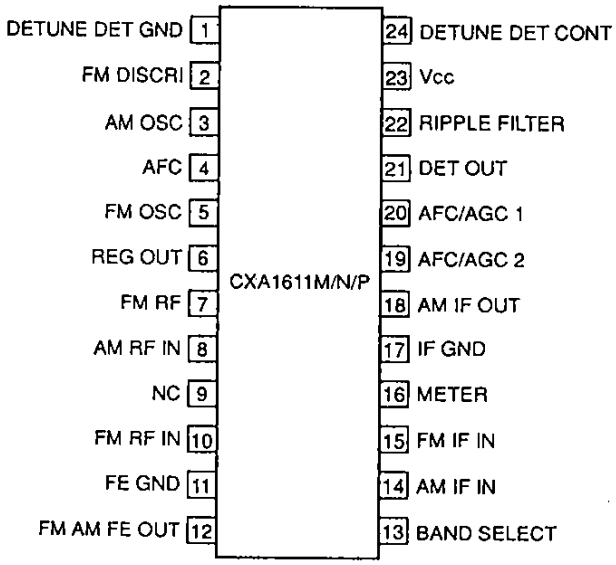
Supply voltage	Vcc	2 to 9	V

E93703A8X

Block Diagram



Pin Configuration (Top View)



Pin Description

Pin No.	Symbol	Description
1	GND	Ground for band signal output
2	FM DISCRI	Discriminator pin; to be connected to FM discriminator
3	AM OSC	AM local oscillator circuit
4	AFC	AFC input pin
5	FM OSC	FM local oscillator
6	REG OUT	Regulator; 1.25V (typ.)
7	FM RF	FM RF input; connected to RF tank circuit
8	AM RF IN	AM RF input; connected to BAR ANT
9	NC	
10	FM RF IN	FM RF amplifier circuit; FM RF input
11	GND	Ground for front end
12	FM/AM FE OUT	IF output circuit for AM and FM; connected to AM and FM IF filiters
13	BAND SELECT	Pin of FM and AM band switch; AM for "GND" and FM for "OPEN"
14	AM IF IN	Input stage of AM IF
15	FM IF IN	The first stage of FM IF amplifier circuit
16	METER	Meter drive circuit
17	IF GND	AM/FM IF stage; ground for detector stage
18	AM IF OUT	AM IF output; emitter output
19	AFC/AGC 2	AFC pin for W band; to adjust the time constant (using a capacitor of external circuit) with AM
20	AFC/AGC 1	AFC pin for J band; to adjust the time constant (using a capacitor in external circuit) with AM
21	DET OUT	Pin of the detector output; impedence; approx. 5kΩ
22	RIPPLE	The ripple filter; the hum supression level of approx. 34.5dB can be obtained by connecting a 10 μF capacitor
23	Vcc	IC power supply
24	BAND SIGNAL OUTPUT CONTROL	Band signal output amplitude is adjusted by connecting an outside resistor

Electrical Characteristics

(Ta=25℃, See the Electrical Characteristics Test Circuit)

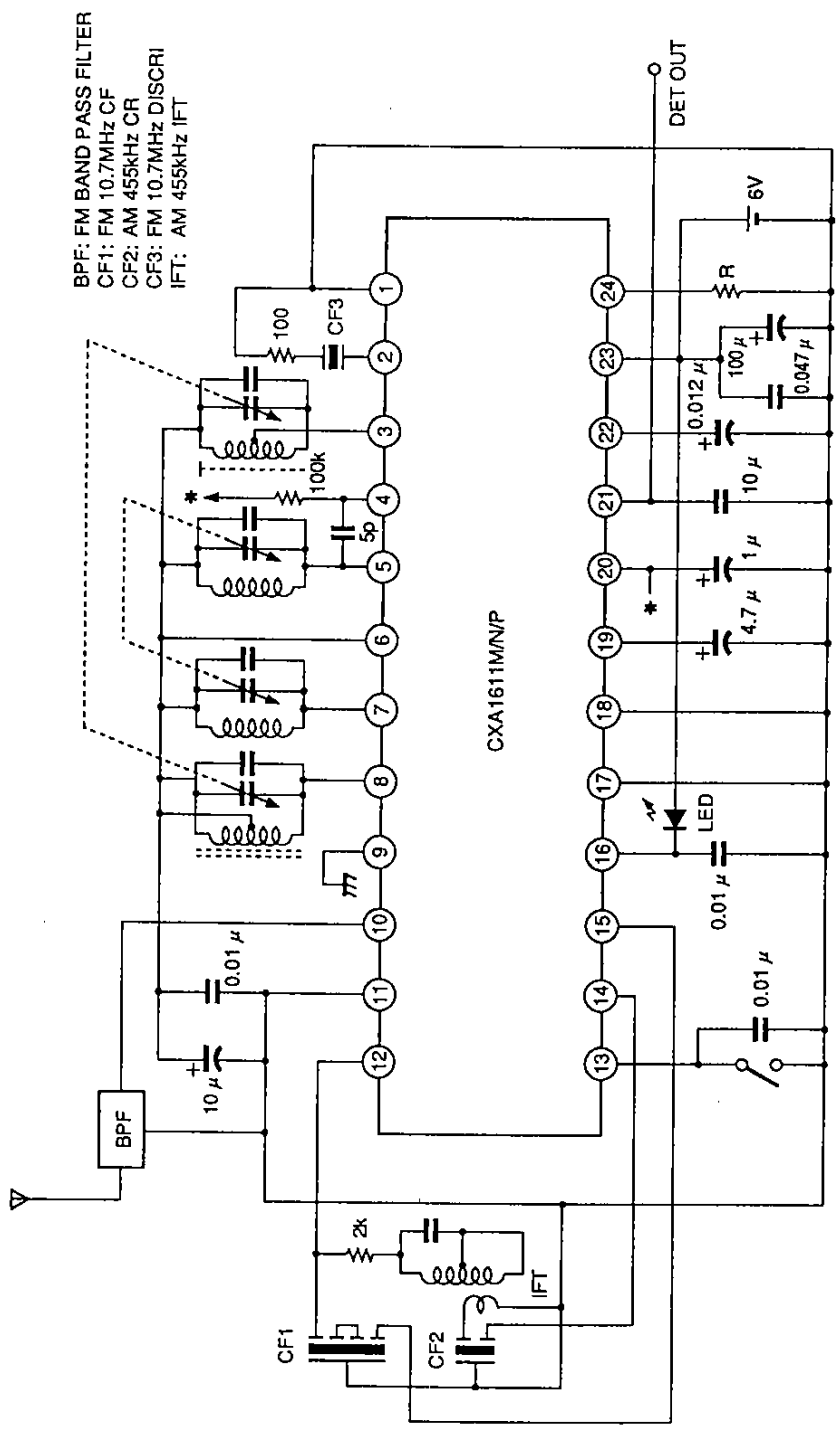
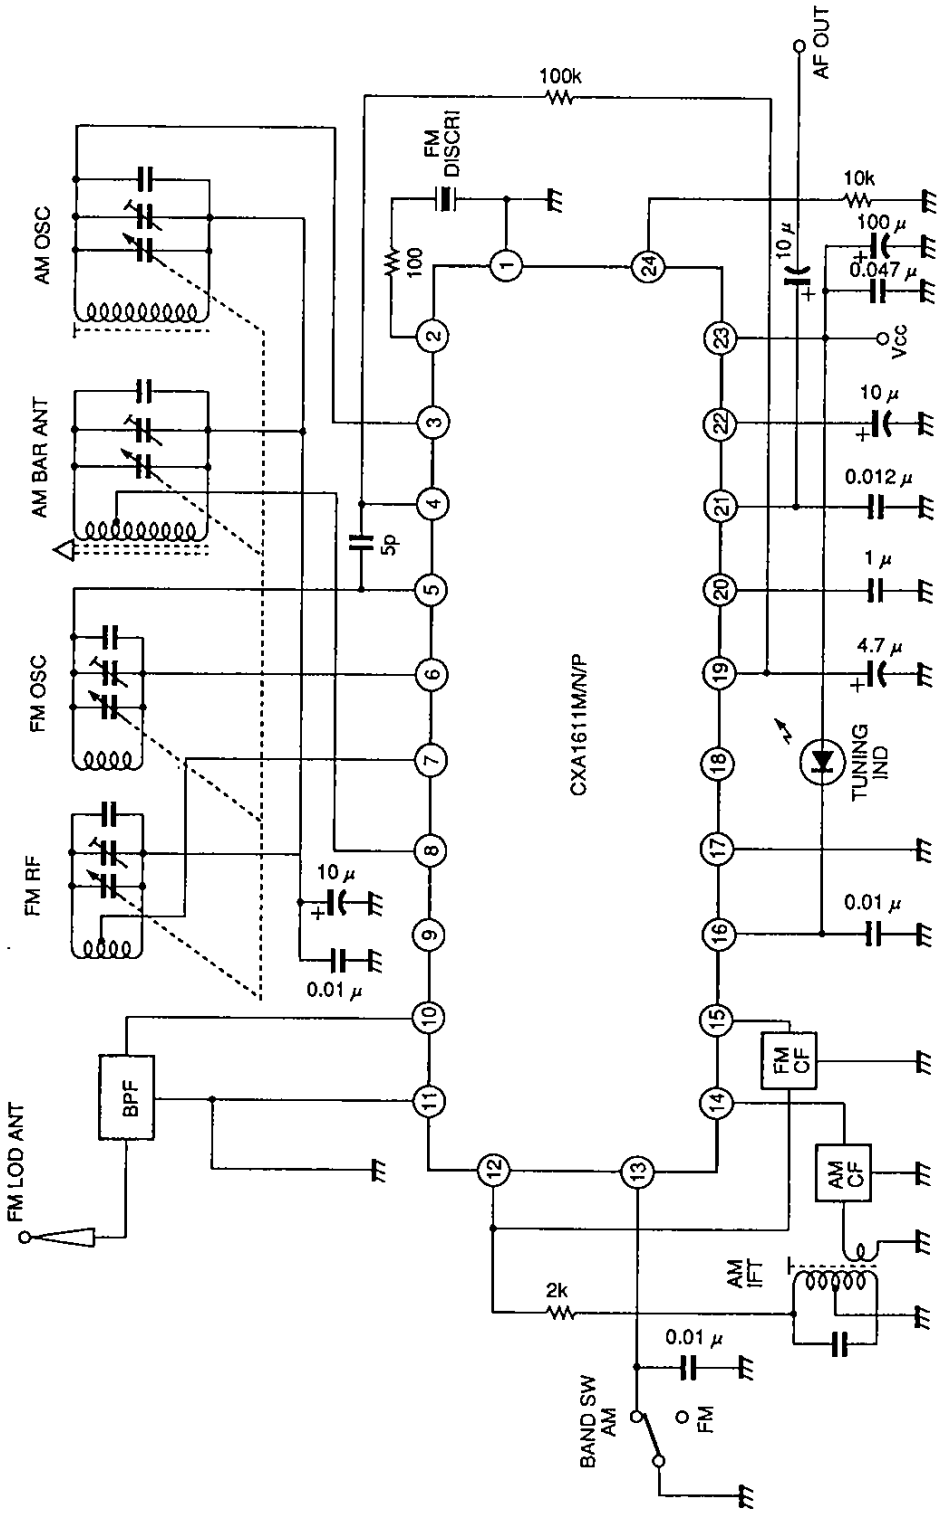
DC Voltage Test Circuit



Note) • The meter current is cut off under the following conditions: CDA 10.7MG1 (Murata Seisakusho co.) is used as CF1, and the input frequency is either 10.7MHz ± 100kHz or more when R is 10kΩ, or 10.7MHz ± 150kHz or more when R is 100kΩ.
• The band signal output function cuts off the meter current when the signal is out of tuning by a specified frequency from the FM IF center frequency.
• The band signal output function is cut off when the voltage on pin 24 is the same as the regulator voltage or Vcc.

Application Circuit



Application circuits shown are typical examples illustrating the operation of the devices. Sony cannot assume responsibility for any problems arising out of the use of these circuits or for any infringement of third party patent and other right due to same.
