SONY

Diagonal 6mm (Type 1/3) Progressive Scan CCD Image Sensor with Square Pixel for Color Cameras

Description

The ICX424AQ is a diagonal 6mm (Type 1/3) interline CCD solid-state image sensor with a square pixel array which supports VGA format. Progressive scan allows all pixels signals to be output independently within approximately 1/60 second. This chip features an electronic shutter with variable charge-storage time which makes it possible to realize full-frame still images without a mechanical shutter. High sensitivity and low dark current are achieved through the adoption of the HAD (Hole-Accumulation Diode) sensors.

This chip is suitable for applications such as FA and surveillance cameras.

Features

- · Progressive scan allows individual readout of the image signals from all pixels.
- · High vertical resolution still images without a mechanical shutter
- Square pixel
- Supports VGA format
- Horizontal drive frequency: 24.54MHz
- No voltage adjustments (reset gate and substrate bias are not adjusted.)
- R, G, B primary color mosaic filters on chip
- High resolution, high color reproductivity, high sensitivity, low dark current
- Continuous variable-speed shutter
- · Low smear
- Excellent anti-blooming characteristics
- Horizontal register: 5.0V drive
- 16-pin high precision plastic package (enables dual-surface standard)

Device Structure

- Interline CCD image sensor
- Image size: Diagonal 6mm (Type 1/3)
- Number of effective pixels: 659 (H) \times 494 (V) approx. 330K pixels
- 692 (H) \times 504 (V) approx. 350K pixels • Total number of pixels:

Silicon

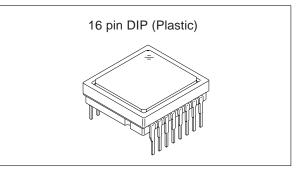

- Chip size:
- Unit cell size:
- Optical black:
- 5.79mm (H) × 4.89mm (V) $7.4\mu m$ (H) \times $7.4\mu m$ (V) Horizontal (H) direction: Front 2 pixels, rear 31 pixels Vertical (V) direction: Front 8 pixels, rear 2 pixels • Number of dummy bits: Horizontal 16 Vertical 5
- Substrate material:

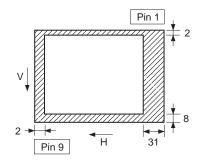

ne(X

USE RESTRICTION NOTICE (December 1, 2003 ver.)

This USE RESTRICTION NOTICE ("Notice") is for customers who are considering or currently using the CCD products ("Products") set forth in this specifications book. Sony Corporation ("Sony") may, at any time, modify this Notice which will be available to you in the latest specifications book for the Products. You should abide by the latest version of this Notice. If a Sony subsidiary or distributor has its own use restriction notice on the Products, such a use restriction notice will additionally apply between you and the subsidiary or distributor. You should consult a sales representative of the subsidiary or distributor of Sony on such a use restriction notice when you consider using the Products.

Use Restrictions

- The Products are intended for incorporation into such general electronic equipment as office products, communication products, measurement products, and home electronics products in accordance with the terms and conditions set forth in this specifications book and otherwise notified by Sony from time to time.
- You should not use the Products for critical applications which may pose a life- or injury- threatening risk or are highly likely to cause significant property damage in the event of failure of the Products. You should consult your Sony sales representative beforehand when you consider using the Products for such critical applications. In addition, you should not use the Products in weapon or military equipment.
- Sony disclaims and does not assume any liability and damages arising out of misuse, improper use, modification, use of the Products for the above-mentioned critical applications, weapon and military equipment, or any deviation from the requirements set forth in this specifications book.

Design for Safety

• Sony is making continuous efforts to further improve the quality and reliability of the Products; however, failure of a certain percentage of the Products is inevitable. Therefore, you should take sufficient care to ensure the safe design of your products such as component redundancy, anti-conflagration features, and features to prevent mis-operation in order to avoid accidents resulting in injury or death, fire or other social damage as a result of such failure.

Export Control

• If the Products are controlled items under the export control laws or regulations of various countries, approval may be required for the export of the Products under the said laws or regulations. You should be responsible for compliance with the said laws or regulations.

No License Implied

• The technical information shown in this specifications book is for your reference purposes only. The availability of this specifications book shall not be construed as giving any indication that Sony and its licensors will license any intellectual property rights in such information by any implication or otherwise. Sony will not assume responsibility for any problems in connection with your use of such information or for any infringement of third-party rights due to the same. It is therefore your sole legal and financial responsibility to resolve any such problems and infringement.

Governing Law

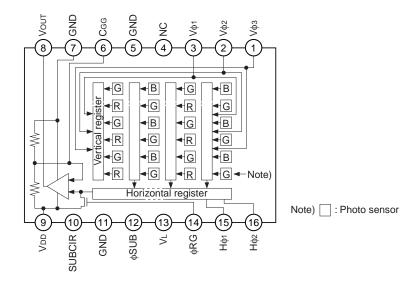

• This Notice shall be governed by and construed in accordance with the laws of Japan, without reference to principles of conflict of laws or choice of laws. All controversies and disputes arising out of or relating to this Notice shall be submitted to the exclusive jurisdiction of the Tokyo District Court in Japan as the court of first instance.

Other Applicable Terms and Conditions

• The terms and conditions in the Sony additional specifications, which will be made available to you when you order the Products, shall also be applicable to your use of the Products as well as to this specifications book. You should review those terms and conditions when you consider purchasing and/or using the Products.

Block Diagram and Pin Configuration

Pin Description

Pin No.	Symbol	Description	Pin No.	Symbol	Description
1	Vфз	Vertical register transfer clock	9	Vdd	Supply voltage
2	Vø2	Vertical register transfer clock	10	SUBCIR	Supply voltage for the substrate voltage generation
3	Vφ1	Vertical register transfer clock	11	GND	GND
4	NC		12	φSUB	Substrate clock
5	GND	GND	13	VL	Protective transistor bias
6	CGG	Output amplifier gate*1	14	φRG	Reset gate clock
7	GND	GND	15	Ηφ1	Horizontal register transfer clock
8	Vout	Signal output	16	Ηφ2	Horizontal register transfer clock

*1 DC bias is applied within the CCD, so that this pin should be grounded externally through a capacitance of 1000pF.

Absolute Maximum Ratings

	Item	Ratings	Unit	Remarks
Substrate clock	3 – GND	-0.3 to +36	V	
Supply voltage	VDD, VOUT, CGG, SUBCIR – GND	-0.3 to +18	V	
	Vdd, Vout, Cgg, SUBCIR – ϕ SUB	-22 to +9	V	
Clock input voltage	Vφ1, Vφ2, Vφ3 – GND	-15 to +16	V	
chook input volkage	$V\phi_1, V\phi_2, V\phi_3 - \phi SUB$	to +10	V	
Voltage difference be	tween vertical clock input pins	to +15	V	*2
Voltage difference be	tween horizongal clock input pins	to +16	V	
Ηφ1, Ηφ2 – Vφ3		-16 to +16	V	
Ηφ1, Ηφ2 – GND		-10 to +15	V	
Ηφ1, Ηφ2 – φSUB		-55 to +10	V	
V∟ – ∳SUB		-65 to +0.3	V	
Vφ2, Vφ3 — VL		-0.3 to +27.5	V	
RG – GND		-0.3 to +20.5	V	
Vφ1, Hφ1, Hφ2, GND -	- VL	-0.3 to +17.5	V	
Storage temperature		-30 to +80	°C	
Performance guarant	ee temperature	-10 to +60	°C	
Operating temperatur	e	-10 to +75	°C	

 *2 +24V (Max.) when clock width < 10µs, clock duty factor < 0.1%.

+16V (Max.) is guaranteed for power-on and power-off.

Bias Conditions

Item	Symbol	Min.	Тур.	Max.	Unit	Remarks
Supply voltage	Vdd	14.55	15.0	15.45	V	
Protective transistor bias	VL		*1	•		
Substrate clock	φSUB		*2			
Reset gate clock	φRG		*3			

*1 VL setting is the VvL voltage of the vertical transfer clock waveform, or the same voltage as the VL power supply for the V driver should be used.

 $^{\ast 2}~$ Set SUBCIR pin to open when applying a DC bias to the substrate clock pin.

*3 Do not apply a DC bias to the reset gate clock pins, because a DC bias is generated within the CCD.

Vertical transfer clock equivalent circuit

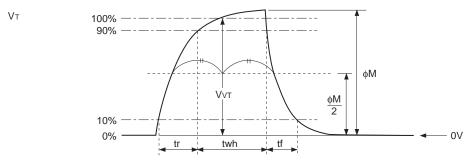

Reset gate clock equivalent circuit

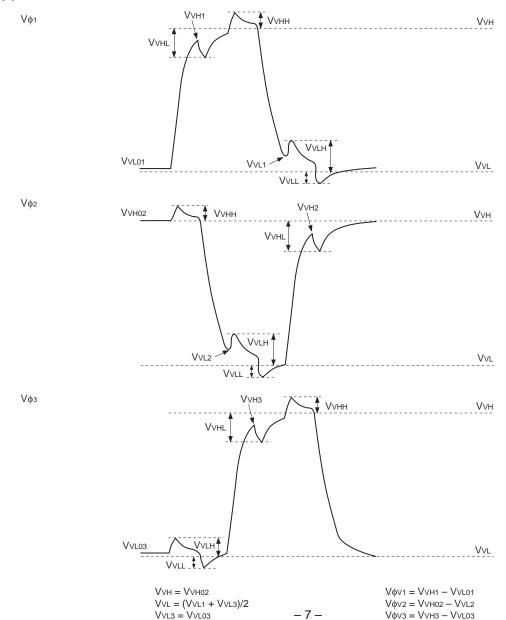

Drive Clock Waveform Conditions

(1) Readout clock waveform

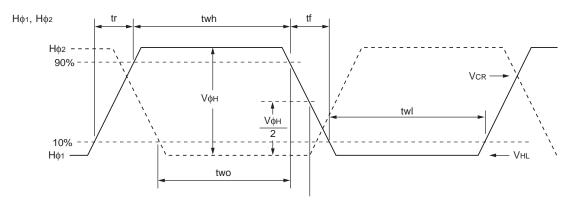

Note) Readout clock is used by composing vertical transfer clocks V $_{\varphi 2}$ and V $_{\varphi 3}.$

(2) Vertical transfer clock waveform

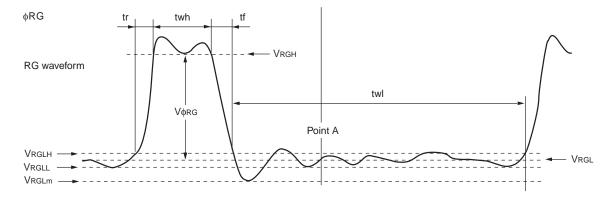

(3) Horizontal transfer clock waveform

Cross-point voltage for the H ϕ_1 rising side of the horizontal transfer clocks H ϕ_1 and H ϕ_2 waveforms is VcR. The overlap period for twh and twl of horizontal transfer clocks H ϕ_1 and H ϕ_2 is two.

(4) Reset gate clock waveform

VRGLH is the maximum value and VRGLL is the minimum value of the coupling waveform during the period from Point A in the above diagram until the rising edge of RG.

In addition, VRGL is the average value of VRGLH and VRGLL.

VRGL = (VRGLH + VRGLL)/2

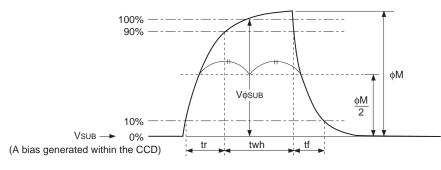

Assuming VRGH is the minimum value during the interval twh, then:

Vørg = Vrgh - Vrgl

Negative overshoot level during the falling edge of RG is VRGLm.

(5) Substrate clock waveform

Image Sensor Characteristics Measurement Method

○ Measurement conditions

- (1) In the following measurements, the device drive conditions are at the typical values of the bias and clock voltage conditions.
- (2) In the following measurements, spot blemishes are excluded and, unless otherwise specified, the optical black level (OB) is used as the reference for the signal output, which is taken as the value of the Gr/Gb channel signal output or the R/B channel signal output of the measurement system.

○ Color coding of this image sensor & Readout

The primary color filters of this image sensor are arranged in the layout shown in the figure on the left (Bayer arrangement). Gr and Gb denote the G signals on the same line as the R signal and the B signal, respectively.

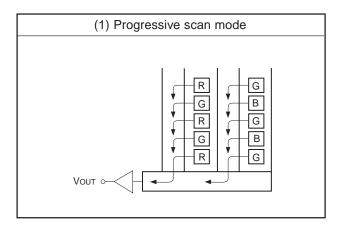

Color Coding Diagram

All pixels signals are output successively in a 1/60s period.

The R signal and Gr signal lines and Gb signal and B signal lines are output successively.

Image sensor readout mode

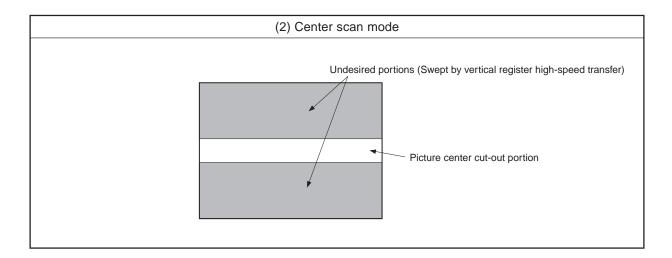

The diagram below shows the output methods for the following two readout modes.

1. Progressive scan mode

In this mode, all pixel signals are output in non-interlace format in 1/60s.

All pixel signals within the same exposure period are read out simultaneously, making this mode suitable for high resolution image capturing.

2. Center scan mode

This is the center scan mode using the progressive scan method.

The undesired portions are swept by vertical register high-speed transfer, and the picture center portion is cut out.

There are the mode (120 frames/s) which outputs 222 lines of an output line portion, and the mode (240 frames/s) which outputs 76 lines.

O Definition of standard imaging conditions

(1) Standard imaging condition I:

Use a pattern box (luminance: 706cd/m², color temperature of 3200K halogen source) as a subject. (Pattern for evaluation is not applicable.) Use a testing standard lens with CM500S (t = 1.0mm) as an IR cut filter and image at F5.6. The luminous intensity to the sensor receiving surface at this point is defined as the standard sensitivity testing luminous intensity.

(2) Standard imaging condition II:

Image a light source (color temperature of 3200K) with a uniformity of brightness within 2% at all angles. Use a testing standard lens with CM500S (t = 1.0mm) as an IR cut filter. The luminous intensity is adjusted to the value indicated in each testing item by the lens diaphragm.

1. G Sensitivity, sensitivity comparison

Set to standard imaging condition I. After setting the electronic shutter mode with a shutter speed of 1/100s, measure the signal outputs (V_{Gr}, V_{Gb}, V_R and V_B) at the center of each Gr, Gb, R and B channel screens, and substitute the values into the following formula.

$$V_{G} = (V_{Gr} + V_{Gb})/2$$

$$Sg = V_{G} \times \frac{100}{30} \text{ [mV]}$$

$$Rr = V_{R}/V_{G}$$

$$Rb = V_{B}/V_{G}$$

2. Saturation signal

Set to standard imaging condition II. After adjusting the luminous intensity to 20 times the intensity with the average value of the Gr signal output, 150mV, measure the minimum values of the Gr, Gb, R and B signal outputs.

3. Smear

Set to standard imaging condition II. With the lens diaphragm at F5.6 to F8, first adjust the average value of the Gr signal output to 150mV. Measure the average values of the Gr signal output, Gb signal output, R signal output and B signal output (Gra, Gba, Ra and Ba), and then adjust the luminous intensity to 500 times the intensity with average value of the Gr signal output, 150mV. After the readout clock is stopped and the charge drain is executed by the electronic shutter at the respective H blankings, measure the maximum value (V_{sm} [mV]), independent of the Gr, Gb, R and b signal outputs, and substitute the values into the following formula.

Sm =
$$20 \times \log \left(\text{Vsm} \div \frac{\text{Gra} + \text{Gba} + \text{Ra} + \text{Ba}}{4} \times \frac{1}{500} \times \frac{1}{10} \right) [\text{dB}] (1/10\text{V method conversion value})$$

4. Video signal shading

Set to standard imaging condition II. With the lens diaphragm at F5.6 to F8, adjust the luminous intensity so that the average value of the Gr signal output is 150mV. Then measure the maximum (Grmax [mV]) and minimum (Grmin [mV]) values of the Gr signal output and substitute the values into the following formula.

SHg = $(Grmax - Grmin)/150 \times 100$ [%]

5. Uniformity between video signal channels

After measuring 4, measure the maximum (Rmax [mV]) and minimum (Rmin [mV]) values of the R signal and the maximum (Bmax [mV]) and minimum (Bmin [mV]) values of the B signal, and substitute the values into the following formula.

 Δ Srg = | (Rmax - Rmin)/150 | × 100 [%] Δ Sbg = | (Bmax - Bmin)/150 | × 100 [%]

6. Dark signal

Measure the average value of the signal output (Vdt [mV]) with the device ambient temperature 60°C and the device in the light-obstructed state, using the horizontal idle transfer level as a reference.

7. Dark signal shading

After measuring 6, measure the maximum (Vdmax [mV]) and minimum (Vdmin [mV]) values of the dark signal output and substitute the values into the following formula.

 $\Delta Vdt = Vdmax - Vdmin [mV]$

8. Line crawls

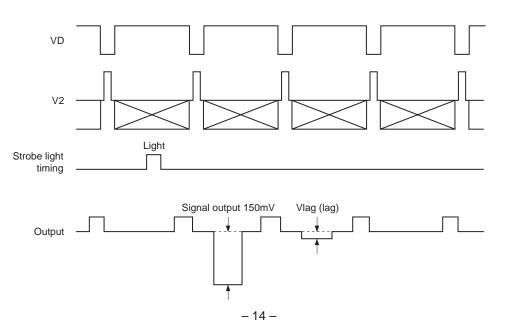

Set to standard imaging condition II. Adjust the luminous intensity so that the average value of the Gr signal output is 150mV, and then insert R, G, and B filters and measure the difference between G signal lines (Δ Glr, Glg, Glb [mV]).as well as the average value of the G signal output (Gar, Gag, Gab). Substitute the values into the following formula.

$$Lci = \frac{\Delta Gli}{Gai} \times 100 [\%] \quad (i = w, r, g, b)$$

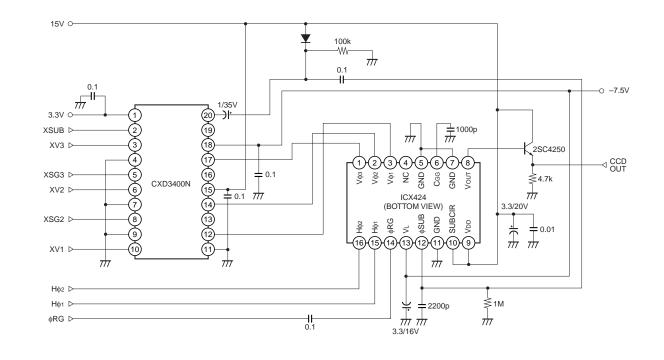

9. Lag

Adjust the Gr signal output value generated by strobe light to 150mV. After setting the strobe light so that it strobes with the following timing, measure the residual signal (Vlag). Substitute the value into the following formula.

Notes on Handling

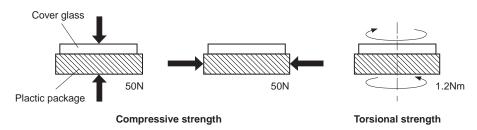

1) Static charge prevention

CCD image sensors are easily damaged by static discharge. Before handling be sure to take the following protective measures.

- a) Either handle bare handed or use non-chargeable gloves, clothes or material. Also use conductive shoes.
- b) When handling directly use an earth band.
- c) Install a conductive mat on the floor or working table to prevent the generation of static electricity.
- d) Ionized air is recommended for discharge when handling CCD image sensors.
- e) For the shipment of mounted substrates, use boxes treated for the prevention of static charges.
- 2) Soldering
 - a) Make sure the package temperature does not exceed 80°C.
 - b) Solder dipping in a mounting furnace causes damage to the glass and other defects. Use a 30W soldering iron with a ground wire and solder each pin in less than 2 seconds. For repairs and remount, cool sufficiently.
 - c) To dismount an image sensor, do not use a solder suction equipment. When using an electric desoldering tool, use a thermal controller of the zero-cross On/Off type and connect it to ground.
- 3) Dust and dirt protection

Image sensors are packed and delivered by taking care of protecting its glass plates from harmful dust and dirt. Clean glass plates with the following operations as required, and use them.

- a) Perform all assembly operations in a clean room (class 1000 or less).
- b) Do not either touch glass plates by hand or have any object come in contact with glass surfaces. Should dirt stick to a glass surface, blow it off with an air blower. (For dirt stuck through static electricity ionized air is recommended.)
- c) Clean with a cotton bud and ethyl alcohol if grease stained. Be careful not to scratch the glass.
- d) Keep in a case to protect from dust and dirt. To prevent dew condensation, preheat or precool when moving to a room with great temperature differences.
- e) When a protective tape is applied before shipping, just before use remove the tape applied for electrostatic protection. Do not reuse the tape.
- 4) Installing (attaching)
 - a) Remain within the following limits when applying a static load to the package. Do not apply any load more than 0.7mm inside the outer perimeter of the glass portion, and do not apply any load or impact to limited portions. (This may cause cracks in the package.)

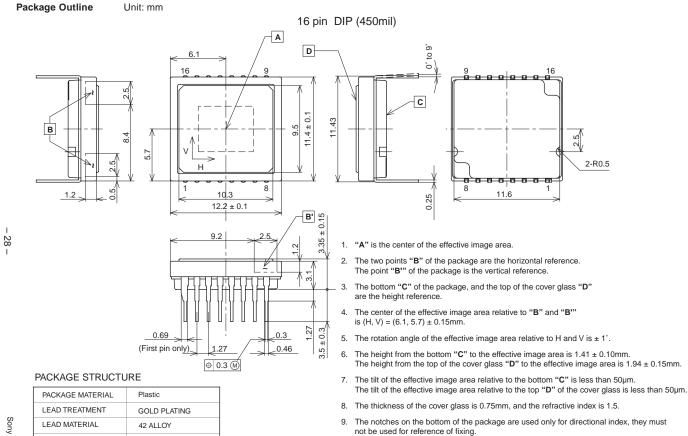

b) If a load is applied to the entire surface by a hard component, bending stress may be generated and the package may fracture, etc., depending on the flatness of the bottom of the package. Therefore, for installation, use either an elastic load, such as a spring plate, or an adhesive.

- c) The adhesive may cause the marking on the rear surface to disappear, especially in case the regulated voltage value is indicated on the rear surface. Therefore, the adhesive should not be applied to this area, and indicated values should be transferred to other locations as a precaution.
- d) The notch of the package is used for directional index, and that can not be used for reference of fixing.
 In addition, the cover glass and seal resin may overlap with the notch of the package.
- e) If the leads are bent repeatedly and metal, etc., clash or rub against the package, the dust may be generated by the fragments of resin.
- f) Acrylate anaerobic adhesives are generally used to attach CCD image sensors. In addition, cyanoacrylate instantaneous adhesives are sometimes used jointly with acrylate anaerobic adhesives. (reference)

5) Others

- a) Do not expose to strong light (sun rays) for long periods, color filters will be discolored. When high luminance objects are imaged with the exposure level control by electronic-iris, the luminance of the image-plane may become excessive and discolor of the color filter will possibly be accelerated. In such a case, it is advisable that taking-lens with the automatic-iris and closing of the shutter during the power-off mode should be properly arranged. For continuous using under cruel condition exceeding the normal using condition, consult our company.
- b) Exposure to high temperature or humidity will affect the characteristics. Accordingly avoid storage or usage in such conditions.
- c) Brown stains may be seen on the bottom or side of the package. But this does not affect the CCD characteristics.
