

40V Precision Single Supply Rail-Rail Output Low Power Operational Amplifiers

ISL28108, ISL28208

The ISL28108 and ISL28208 are single and dual low power precision amplifiers optimized for single supply applications. These devices feature a common mode input voltage range extending to 0.5V below the V- rail, a rail-to-rail differential input voltage range for use as a comparator, and rail to rail output voltage swing, which make them ideal for single supply applications where input operation at ground is important.

Added features include low offset voltage, and low temperature drift making them the ideal choice for applications requiring high DC accuracy. The output stage is capable of driving large capacitive loads from rail to rail for excellent ADC driving performance. The devices can operate for single or dual supply from 3V ($\pm 1.5V$) to 40V ($\pm 20V$) and are fully characterized at $\pm 5V$ and $\pm 15V$. The combination of precision, low power, and small footprint provides the user with outstanding value and flexibility relative to similar competitive parts.

Applications for these amplifiers include precision instrumentation, data acquisition, precision power supply control, and industrial control.

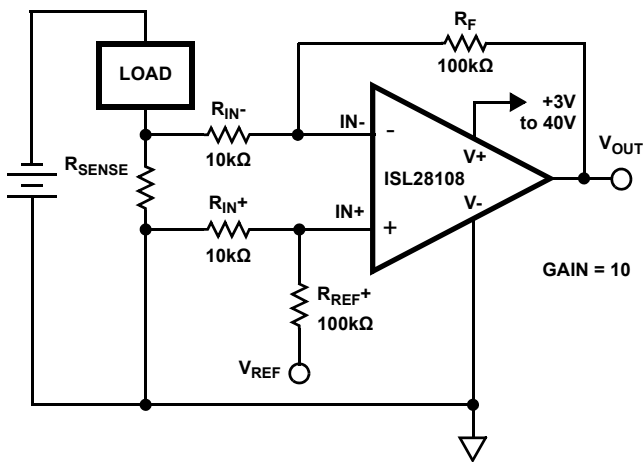

The ISL28108 single is offered in 8 Ld TDFN, SOIC and MSOP packages. The ISL28208 dual amplifier is offered in 8 Ld TDFN, MSOP, and SOIC packages. All devices are offered in standard pin configurations and operate over the extended temperature range to $-40^{\circ}C$ to $+125^{\circ}C$.

Features

- Single or Dual Supply, Rail-to-Rail Output and Below Ground (V-) input capability
- Rail-to-rail Input Differential Voltage Range for Comparator Applications
- Single Supply Range 3V to 40V
- Low Current Consumption ($V_S = \pm 5V$) 165 μA
- Low Noise Voltage 15.8nV/ \sqrt{Hz}
- Low Noise Current 80fA/ \sqrt{Hz}
- Low Input Offset Voltage 230 μV
- Superb Temperature Drift
 - Voltage Offset TC 0.1 $\mu V/^{\circ}C$, Typ
- Low Input Bias Current -13nA Typ
- Operating Temperature Range $-40^{\circ}C$ to $+125^{\circ}C$
- No Phase Reversal

Applications

- Precision Instruments
- Medical Instrumentation
- Data Acquisition
- Power Supply Control
- Industrial Process Control

NOTES:

1. Add "-T*" suffix for tape and reel. Please refer to [TB347](#) for details on reel specifications.
2. These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
3. For Moisture Sensitivity Level (MSL), please see device information page for [ISL28108](#), [ISL28208](#). For more information on MSL please see techbrief [TB363](#).

Absolute Maximum Ratings

Maximum Supply Voltage	42V
Maximum Differential Input Voltage	.42V or $V_- - 0.5V$ to $V_+ + 0.5V$
Min/Max Input Voltage	.42V or $V_- - 0.5V$ to $V_+ + 0.5V$
Max/Min Input Current	$\pm 20mA$
Output Short-Circuit Duration (1 output at a time)	Indefinite
ESD Tolerance	
Human Body Model (Tested per JESD22-A114F)	6kV
Machine Model (Tested per JESD22-A115-C)	400V
Charged Device Model (Tested per JESD22-C110D)	2kV

Thermal Information

Thermal Resistance (Typical)	θ_{JA} ($^{\circ}C/W$)	θ_{JC} ($^{\circ}C/W$)
8 Ld SOIC Package (108, 208, Notes 4, 6)	120	55
8 Ld TDFN Package (208, Notes 5, 6)	48	5.5
8 Ld MSOP Package (208, Notes 4, 6)	150	45
Storage Temperature Range	-65 $^{\circ}C$ to +150 $^{\circ}C$	
Pb-Free Reflow Profile	see link below http://www.intersil.com/pbfree/Pb-FreeReflow.asp	

Operating Conditions

Ambient Operating Temperature Range	-40 $^{\circ}C$ to +125 $^{\circ}C$
Maximum Operating Junction Temperature	+150 $^{\circ}C$
Supply Voltage	3V ($\pm 1.5V$) to 40V ($\pm 20V$)

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

NOTES:

- θ_{JA} is measured with the component mounted on a high effective thermal conductivity test board in free air. See Tech Brief TB379 for details.
- θ_{JA} is measured in free air with the component mounted on a high effective thermal conductivity test board with "direct attach" features. See Tech Brief TB379.
- For θ_{JC} , the "case temp" location is taken at the package top center.

IMPORTANT NOTE: All parameters having Min/Max specifications are guaranteed. Typical values are for information purposes only. Unless otherwise noted, all tests are at the specified temperature and are pulsed tests, therefore: $T_J = T_C = T_A$

Applications Information

Functional Description

The ISL28108 and ISL28208 are single and dual, 1.2MHz, single supply rail-to-rail output amplifiers with a common mode input voltage range extending to a range of 0.5V below the V- rail. Their input stages are optimized for precision sensing of ground referenced signals in low voltage, single supply applications. The input stage has the capability of handling large input differential voltages without phase inversion making them suitable for high voltage comparator applications. Their bipolar design features high open loop gain and excellent DC input and output temperature stability. These op amps feature low quiescent current of 165µA, and a maximum low temperature drift of only 1.1µV/°C for the SOIC package and 1.4µV/°C for the TDFN package (see Figures 7 and 8). Both devices are fabricated in a new precision 40V complementary bipolar DI process and immune from latch-up.

Operating Voltage Range

The devices are designed to operate over the 3V (±1.5V) to 40V (±20V) range and are fully characterized at ±5V and ±15V. Both DC and AC performance remain virtually unchanged over the ±5V to ±15V operating voltage range. Parameter variation with operating voltage is shown in the “Typical Performance Curves” beginning on page 6.

Input Stage Performance

The ISL28108 and ISL28208 PNP input stage has a common mode input range extending up to 0.5V below ground at +25°C (see Figures 1.1 and 1.2). Full amplifier performance is guaranteed down to ground (V-) over the -40°C to +125°C temperature range. For common mode voltages down to -0.5V the amplifiers are fully functional, but performance degrades slightly over the full temperature range. This feature provides excellent CMRR, AC performance and DC accuracy when amplifying low level ground referenced signals.

The input stage has a maximum input differential voltage equal to a diode drop greater than the supply voltage (max 42V) and does not contain the back-to-back input protection diodes found on many similar amplifiers. This feature enables the device to function as a precision comparator by maintaining very high input impedance for high voltage differential input comparator voltages. The high differential input impedance also enables the device to operate reliably in large signal pulse applications without the need for anti-parallel clamp diodes required on MOSFET and most bipolar input stage op amps. Thus, input signal distortion caused by nonlinear clamps under high slew rate conditions are avoided.

In applications where one or both amplifier input terminals are at risk of exposure to voltages beyond the supply rails, current limiting resistors may be needed at each input terminal (see Figure 53 R_{IN+} , R_{IN-}) to limit current through the power supply ESD diodes to 20mA.

FIGURE 53. INPUT ESD DIODE CURRENT LIMITING

Output Drive Capability

The bipolar rail-to-rail output stage features low saturation levels that enable an output voltage swing to less than 10mV when the total output load (including feedback resistance) is held below 50µA (Figures 19 and 20). With ±15V supplies this can be achieved by using feedback resistor values >300kΩ. The low input bias and offset currents (-43nA and ±3nA +25°C max respectively) minimize DC offset errors at these high resistance values. For example, a balanced 4 resistor gain circuit (Figure 53) with 1MΩ feedback resistors (R_F , R_G) generates a worst case input offset error of only ±3mV. Furthermore, the low noise current reduces the added noise associated with high feedback resistance.

The output stage can swing at moderate levels of output current (Figures 21 and 22) and the output stage is internally current limited. Output current limit over-temperature is shown in Figures 25 and 26. The amplifiers can withstand a short circuit to either rail as long as the power dissipation limits are not exceeded. This applies to only 1 amplifier at a time for the dual op amp. Continuous operation under these conditions may degrade long term reliability.

The amplifiers perform well driving capacitive loads (Figures 48 and 49). The unity gain, voltage follower (buffer) configuration provides the highest bandwidth, but is also the most sensitive to ringing produced by load capacitance found in BNC cables. Unity gain overshoot is limited to 30% at capacitance values to 0.33nF. At gains of 10 and higher, the device is capable of driving more than 10nF without significant overshoot.

Output Phase Reversal

Output phase reversal is a change of polarity in the amplifier transfer function when the input voltage exceeds the supply voltage. The ISL28108 and ISL28208 are immune to output phase reversal, out to 0.5V beyond the rail ($V_{ABS MAX}$) limit (see Figure 28).

Using Only One Channel

The ISL28208 is a dual op-amp. If the application only requires one channel, the user must configure the unused channel to prevent it from oscillating. The unused channel will oscillate if the input and output pins are floating. This will result in higher than expected supply currents and possible noise injection into the channel being used. The proper way to prevent this oscillation, is to short the output to the inverting input and ground the positive input (as shown in Figure 54).

FIGURE 54. PREVENTING OSCILLATIONS IN UNUSED CHANNELS

Power Dissipation

It is possible to exceed the +150°C maximum junction temperatures under certain load and power supply conditions. It is therefore important to calculate the maximum junction temperature (T_{JMAX}) for all applications to determine if power supply voltages, load conditions, or package type need to be modified to remain in the safe operating area. These parameters are related using Equation 1:

$$T_{JMAX} = T_{MAX} + \theta_{JA} \times PD_{MAXTOTAL} \quad (EQ. 1)$$

where:

- $PD_{MAXTOTAL}$ is the sum of the maximum power dissipation of each amplifier in the package (PD_{MAX})
- PD_{MAX} for each amplifier can be calculated using Equation 2:

$$PD_{MAX} = V_S \times I_{qMAX} + (V_S - V_{OUTMAX}) \times \frac{V_{OUTMAX}}{R_L} \quad (EQ. 2)$$

where:

- T_{MAX} = Maximum ambient temperature
- θ_{JA} = Thermal resistance of the package
- PD_{MAX} = Maximum power dissipation of 1 amplifier
- V_S = Total supply voltage
- I_{qMAX} = Maximum quiescent supply current of 1 amplifier
- V_{OUTMAX} = Maximum output voltage swing of the application
- R_L = Load resistance

ISL28108 and ISL28208 SPICE Model

Figure 56 shows the SPICE model schematic and Figure 57 shows the net list for the SPICE model. The model is a simplified version of the actual device and simulates important AC and DC parameters. AC parameters incorporated into the model are: $1/f$ and flatband noise voltage, Slew Rate, CMRR, Gain and Phase. The DC parameters are I_{OS} , total supply current and output voltage swing. The model uses typical parameters given in the "Electrical Specifications" Table beginning on page 3. The AVOL is adjusted for 122dB with the dominant pole at 1Hz. The CMRR is set 128dB, $f = 6kHz$. The input stage models the actual device to present an accurate AC representation. The model is configured for ambient temperature of +25°C.

Figures 58 through 72 show the characterization vs simulation results for the Noise Voltage, Open Loop Gain Phase, Closed Loop Gain vs Frequency, Gain vs Frequency vs R_L , CMRR, Large Signal 10V Step Response, Small Signal 0.05V Step and Output Voltage Swing $\pm 15V$ supplies.

LICENSE STATEMENT

Revision History

The revision history provided is for informational purposes only and is believed to be accurate, but not warranted. Please go to web to make sure you have the latest Rev.

DATE	REVISION	CHANGE
3/11/11	FN6935.1	<p>On page 1, in the first paragraph - added the following after V-rail: "a rail-to-rail differential input voltage range for use as a comparator,..."</p> <p>On page 1 in "Features: Added bullet - "Rail-to-rail Input Differential Voltage Range for Comparator Applications" Changed Low Noise Current from "100fA/sq.root Hz" to "80fA/sq.root Hz"</p> <p>On page 2 in "Ordering Information" - Removed "coming soon" from ISL28208FRTZ part since it is releasing.</p> <p>On page 3, changed "ESD Tolerance" as follows: Human Body Model changed from "3kV" to "6kV" Machine Model changed from "300V" to "400V" Added JEDEC Test information for all ESD ratings</p> <p>On page 3 and page 5, added test conditions for SOIC TCvos specs. Added TCvos specs for TDFN.</p> <p>On page 4 changed "Noise Current Density" Typical from "100" to "80"</p> <p>On page 15, updated Applications Information Functional Description</p> <p>On page 15 Updated Input Stage Performance Section</p> <p>On page 15 Updated Output Drive Capability Section</p> <p>On page 16 Added ISL28108 AND ISL28208 SPICE MODEL and License Agreement section</p> <p>On page 17 Added SPICE NET LIST</p> <p>On page 19 Added Characterization vs Simulation Results curves</p>
2/16/11	FN6935.0	Initial Release.

Products

Intersil Corporation is a leader in the design and manufacture of high-performance analog semiconductors. The Company's products address some of the industry's fastest growing markets, such as, flat panel displays, cell phones, handheld products, and notebooks. Intersil's product families address power management and analog signal processing functions. Go to www.intersil.com/products for a complete list of Intersil product families.

For a complete listing of Applications, Related Documentation and Related Parts, please see the respective device information page on intersil.com: [ISL28108](http://intersil.com/ISL28108), [ISL28208](http://intersil.com/ISL28208)

To report errors or suggestions for this datasheet, please go to: www.intersil.com/askourstaff

FITs are available from our website at: <http://rel.intersil.com/reports/search.php>

For additional products, see www.intersil.com/product_tree

Intersil products are manufactured, assembled and tested utilizing ISO9000 quality systems as noted in the quality certifications found at www.intersil.com/design/quality

Intersil products are sold by description only. Intersil Corporation reserves the right to make changes in circuit design, software and/or specifications at any time without notice. Accordingly, the reader is cautioned to verify that data sheets are current before placing orders. Information furnished by Intersil is believed to be accurate and reliable. However, no responsibility is assumed by Intersil or its subsidiaries for its use; nor for any infringements of patents or other rights of third parties which may result from its use. No license is granted by implication or otherwise under any patent or patent rights of Intersil or its subsidiaries.

Package Outline Drawing

M8.15E

8 LEAD NARROW BODY SMALL OUTLINE PLASTIC PACKAGE

Rev 0, 08/09

NOTES:

1. Dimensions are in millimeters.
Dimensions in () for Reference Only.
2. Dimensioning and tolerancing conform to AMSE Y14.5m-1994.
3. Unless otherwise specified, tolerance : Decimal ± 0.05
4. Dimension does not include interlead flash or protrusions.
Interlead flash or protrusions shall not exceed 0.25mm per side.
5. The pin #1 identifier may be either a mold or mark feature.
6. Reference to JEDEC MS-012.

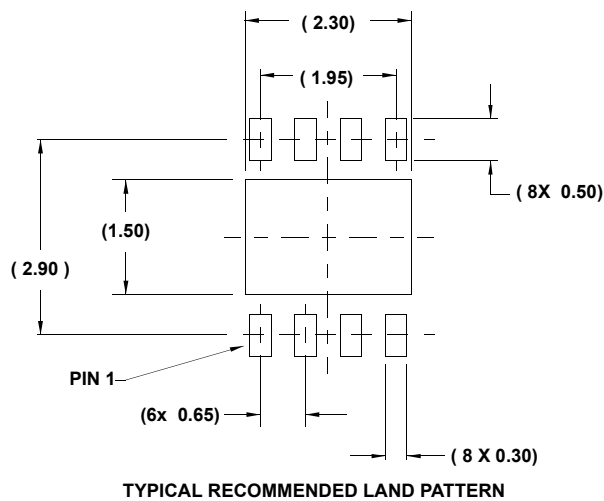

ISL28108, ISL28208

Package Outline Drawing

L8.3x3A

8 LEAD THIN DUAL FLAT NO-LEAD PLASTIC PACKAGE

Rev 4, 2/10

NOTES:

- Dimensions are in millimeters.
Dimensions in () for Reference Only.
- Dimensioning and tolerancing conform to ASME Y14.5m-1994.
- Unless otherwise specified, tolerance : Decimal ± 0.05
- Dimension applies to the metallized terminal and is measured between 0.15mm and 0.20mm from the terminal tip.
- Tiebar shown (if present) is a non-functional feature.
- The configuration of the pin #1 identifier is optional, but must be located within the zone indicated. The pin #1 identifier may be either a mold or mark feature.
- Compliant to JEDEC MO-229 WEEC-2 except for the foot length.

Package Outline Drawing

M8.118

8 LEAD MINI SMALL OUTLINE PLASTIC PACKAGE

Rev 3, 3/10

NOTES:

1. Dimensions are in millimeters.
2. Dimensioning and tolerancing conform to JEDEC MO-187-AA and AMSEY14.5m-1994.
3. Plastic or metal protrusions of 0.15mm max per side are not included.
4. Plastic interlead protrusions of 0.15mm max per side are not included.
5. Dimensions are measured at Datum Plane "H".
6. Dimensions in () are for reference only.
