

# Single, Dual, Quad General Purpose Micropower, RRIO Operational Amplifier

## ISL28113, ISL28213, ISL28413 Features

The ISL28113, ISL28213, and ISL28413 are single, dual, and quad channel general purpose micropower, rail-to-rail input and output operational amplifiers with supply voltage range of 1.8V to 5.5V. Key features are a low supply current of 130µA maximum per channel at room temperature, a low bias current and a wide input voltage range, which enables the ISL28x13 devices to be excellent general purpose op-amps for a wide range of applications.

The ISL28113 is available in the SC70-5 and SOT23-5 packages, the ISL28213 is in the MSOP8, SO8 packages, and the ISL28413 is in the TSSOP14, SOIC14 packages. All devices operate over the extended temperature range of -40°C to +125°C.

- Low Current Consumption . . . . . 130µA
- Wide Supply Range. . . . . 1.8V to 5.5V
- Gain Bandwidth Product . . . . . 2MHz
- Input Bias Current . . . . . 20pA, Max.
- Operating Temperature Range . . . -40°C to +125°C
- Packages
  - ISL28113 (Single) . . . . . SC70-5, SOT23-5
  - ISL28213 (Dual) . . . . . MSOP8, SO8
  - ISL28413 (Quad). . . . . SOIC14, TSSOP14

## Applications\* (see page 15)

- Power Supply Control/Regulation
- Process Control
- Signal Gain/Buffers
- Active Filters
- Current Shunt Sensing
- Trans-impedance Amps

## Typical Application

SINGLE-SUPPLY, LOW-SIDE CURRENT SENSE AMPLIFIER

NOTES:

1. Please refer to [IB347](#) for details on reel specifications.
2. These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
3. For Moisture Sensitivity Level (MSL), please see device information page for [ISL28113](#), [ISL28213](#), [ISL28413](#). For more information on MSL please see techbrief [IB363](#).

## Applications Information

### Functional Description

The ISL28113, ISL28213 and ISL28413 are single, dual and quad, CMOS rail-to-rail input, output (RRIO) micropower operational amplifiers. They are designed to operate from single supply (1.8V to 5.5V) or dual supply ( $\pm 0.9V$  to  $\pm 2.75V$ ). The parts have an input common mode range that extends 100mV above and below the power supply voltage rails. The output stage can swing to within 15mV of the supply rails with a 10k $\Omega$  load.

### Input ESD Diode Protection

All input terminals have internal ESD protection diodes to both positive and negative supply rails, limiting the input voltage to within one diode beyond the supply rails. They also contain back-to-back diodes across the input terminals (see "Pin Descriptions - Circuit 1" on page 3). For applications where the input differential voltage is expected to exceed 0.5V, an external series resistor must be used to ensure the input currents never exceed 20mA (see Figure 18).

FIGURE 18. INPUT CURRENT LIMITING

Although the amplifier is fully protected, high input slew rates that exceed the amplifier slew rate ( $\pm 1V/\mu s$ ) may cause output distortion.

### Output Phase Reversal

Output phase reversal is a change of polarity in the amplifier transfer function when the input voltage exceeds the supply voltage. The ISL28113, ISL28213 and ISL28413 are immune to output phase reversal, even when the input voltage is 1V beyond the supplies.

### Unused Channels

If the application requires less than all amplifiers one channel, the user must configure the unused channel(s) to prevent it from oscillating. The unused channel(s) will oscillate if the input and output pins are floating. This will result in higher than expected supply currents and possible noise injection into the channel being used. The proper way to prevent this oscillation is to short the output to the inverting input and ground the positive input (as shown in Figure 19).

FIGURE 19. PREVENTING OSCILLATIONS IN UNUSED CHANNELS

### Power Dissipation

It is possible to exceed the +125°C maximum junction temperatures under certain load, power supply conditions and ambient temperature conditions. It is therefore important to calculate the maximum junction temperature ( $T_{JMAX}$ ) for all applications to determine if power supply voltages, load conditions, or package type need to be modified to remain in the safe operating area. These parameters are related using Equation 1:

$$T_{JMAX} = T_{MAX} + \theta_{JA} \times PD_{MAXTOTAL} \quad (EQ. 1)$$

where:

- $PD_{MAXTOTAL}$  is the sum of the maximum power dissipation of each amplifier in the package ( $PD_{MAX}$ )
- $PD_{MAX}$  for each amplifier can be calculated using Equation 2:

$$PD_{MAX} = V_S \times I_{qMAX} + (V_S - V_{OUTMAX}) \times \frac{V_{OUTMAX}}{R_L} \quad (EQ. 2)$$

where:

- $T_{MAX}$  = Maximum ambient temperature
- $\theta_{JA}$  = Thermal resistance of the package
- $PD_{MAX}$  = Maximum power dissipation of 1 amplifier
- $V_S$  = Total supply voltage
- $I_{qMAX}$  = Maximum quiescent supply current of 1 amplifier
- $V_{OUTMAX}$  = Maximum output voltage swing of the application
- $R_L$  = Load resistance

### ISL28113, ISL28213 and ISL28413 SPICE Model

Figure 20 shows the SPICE model schematic and Figure 21 shows the net list for the SPICE model. The model is a simplified version of the actual device and simulates important AC and DC parameters. AC parameters incorporated into the model are: 1/f and flatband noise, Slew Rate, CMRR, Gain and Phase. The DC parameters are IOS, total supply current and output voltage swing. The model uses typical parameters given in the "Electrical Specifications" Table beginning on page 4. The AVOL is adjusted for 85dB with the dominate pole at 100Hz. The CMRR is set 72dB,  $f = 35kHz$ ). The input stage models the actual device to present an accurate AC representation. The model is configured for ambient temperature of +25°C.

Figures 22 through 31 show the characterization vs simulation results for the Noise Voltage, Closed Loop Gain vs Frequency, Large Signal 5V Step Response, CMRR and Open Loop Gain Phase.

## Revision History

The revision history provided is for informational purposes only and is believed to be accurate, but not warranted. Please go to Web to make sure you have the latest Rev.

DATE	REVISION	CHANGE
12/16/09	FN6728.3	Removed "Coming Soon" from MSOP package options in the "Ordering Information" on page 2. Updated the Theta JA for the MSOP package option from 170°C/W to 180°C/W on page 4.
11/17/09	FN6728.2	Removed "Coming Soon" from SC70 and SOT-23 package options in the "Ordering Information" on page 2.
11/12/09	FN6728.1	Changed theta Ja to 250 from 300. Added license statement (page 10) and reference in spice model (page 12).
10/26/09	FN6728.0	Initial Release

## Products

Intersil Corporation is a leader in the design and manufacture of high-performance analog semiconductors. The Company's products address some of the industry's fastest growing markets, such as, flat panel displays, cell phones, handheld products, and notebooks. Intersil's product families address power management and analog signal processing functions. Go to [www.intersil.com/products](http://www.intersil.com/products) for a complete list of Intersil product families.

\*For a complete listing of Applications, Related Documentation and Related Parts, please see the respective device information page on intersil.com: [ISL28113](http://www.intersil.com/products), [ISL28213](http://www.intersil.com/products), [ISL28413](http://www.intersil.com/products)

Rev. M 2/07

**NOTES:**

1. Plastic or metal protrusions of 0.006" maximum per side are not included.
2. Plastic interlead protrusions of 0.010" maximum per side are not included.
3. Dimensions "D" and "E1" are measured at Datum Plane "H".
4. Dimensioning and tolerancing per ASME Y14.5M-1994

Rev. F 2/07

NOTES:

1. Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusions or gate burrs shall not exceed 0.15mm per side.
2. Dimension "E1" does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.25mm per side.
3. Dimensions "D" and "E1" are measured at dAtum Plane H.
4. Dimensioning and tolerancing per ASME Y14.5M-1994.

For additional products, see [www.intersil.com/product\\_tree](http://www.intersil.com/product_tree)

Intersil products are manufactured, assembled and tested utilizing ISO9000 quality systems as noted in the quality certifications found at [www.intersil.com/design/quality](http://www.intersil.com/design/quality)

Intersil products are sold by description only. Intersil Corporation reserves the right to make changes in circuit design, software and/or specifications at any time without notice. Accordingly, the reader is cautioned to verify that data sheets are current before placing orders. Information furnished by Intersil is believed to be accurate and reliable. However, no responsibility is assumed by Intersil or its subsidiaries for its use; nor for any infringements of patents or other rights of third parties which may result from its use. No license is granted by implication or otherwise under any patent or patent rights of Intersil or its subsidiaries.
