

Dolby® B-C Type Noise Reduction System with Playback Equalizer Amplifier**Description**

The CXA2511AQ is an IC designed for use in car stereo cassette decks. Functions include Dolby B-C type noise reduction (NR) system, playback equalizer amplifier and music sensor into a single chip.

Features

- Few external parts
- Small package (40-pin QFP)
- Same pin configuration as for the Dolby B type NR system (CXA2510AQ) and no Dolby NR system (CXA2509AQ)
- Dolby B-C type NR and playback equalizer amplifier into a single chip
- FORWARD/REVERSE head select switch
- Two-system (TAPE/AUX) input select switch
- Music signal interval detection level can be set by the external resistors/capacitors (2 modes).
- High-frequency cut-off of the music sensor circuit can be adjusted by the external capacitance.

Applications

- Car stereo cassette decks
- Playback-only cassette decks

40 pin QFP (Plastic)

**Structure**

Bipolar silicon monolithic IC

Absolute Maximum Ratings

• Supply voltage	Vcc	12	V
• Operating temperature	Topr	-40 to +85	°C
• Storage temperature	Tstg	-65 to +150	°C
• Power dissipation	Pd	430	mW

Operating Condition

Supply voltage	Vcc	7.8 to 11	V

Block Diagram and Pin Configuration

Pin Description

(Ta = 25°C, Vcc = 8.0V, DVcc = 5.0V)

Pin No.	Symbol	Typical pin voltage		I/O	I/O resistance	Equivalent circuit	Description
		DC	AC				
1 30	PBEQ1 PBEQ2	4.0V	—	O	—		Resistance for selecting the playback equalizer amplifier time constant
2 29	PBOUT1 PBOUT2	4.0V	-25dBm	O	—		Playback equalizer amplifier output
3	Vcc	8.0V	—	—	—		Power supply
4 27	TAPEIN1 TAPEIN2	4.0V	-30dBm	I	40kΩ		TAPE input
5 26	AUXIN1 AUXIN2	4.0V	—	I	40kΩ		External input
6	MSLPF	4.0V	—	—	100kΩ		Cut-off frequency adjustment of the music sensor LPF

Pin No.	Symbol	Typical pin voltage		I/O	I/O resistance	Equivalent circuit	Description
		DC	AC				
7 24	LINEOUT1 LINEOUT2	4.0V	-6dBm	O	—		Line output
8 23	TCH1 TCH2	0.3V	—	—	—		Time constant for the HLS
9 22	TCL1 TCL2	0.3V	—	—	—		Time constant for the LLS
10 11	G2FB G1FB	4.0V	—	—	—		Music signal interval detection level setting
13	DGND	0.0V	—	—	—		Logic ground (Connect to GND.)

Pin No.	Symbol	Typical pin voltage		I/O	I/O resistance	Equivalent circuit	Description
		DC	AC				
12	MSTC	—	—	—	—		Time constant for detecting the music signal interval
14	MSOUT	0.2V when a signal is detected; DVcc when no signal is detected	—	O	—		Music sensor output
15	NRMODE	0.0V when open	—	I	100kΩ		Dolby NR mode control Low (open): Dolby B type NR High: Dolby C type NR
17	INSW						Line amplifier input select control Low (open): TAPEIN High: AUXIN
21	MSSW						Music sensor control Low (open): MS ON High: MS OFF
16	NRSW	0.0V when open	—	I	100kΩ		Dolby NR control Low (open): NR OFF High: NR ON
18	TAPESW						Playback equalizer amplifier control Low (open): 120μs High: 70μs
19	DRSW						Head select control Low (open): FORWARD High: REVERSE

Pin No.	Symbol	Typical pin voltage		I/O	I/O resistance	Equivalent circuit	Description
		DC	AC				
20	MSMODE	0.0V when open	—	I	100kΩ		Music sensor mode control Low (open): G1 High: G2
25	DIREF	1.2V	—	—	—		Resistance for setting the Dolby NR reference current (Connects 20kΩ between DIREF pin and GND for the standard setting.)
28	GND	0.0V	—	—	—		Ground
31 40	PFB2 PFB1	4.0V	-70dBm	I	—		Playback equalizer amplifier feedback
32 39	PBRIN2 PBRIN1	4.0V	-70dBm	I	—		Playback equalizer amplifier input (REVERSE head connected)
34 37	PBFIN2 PBFIN1						Playback equalizer amplifier input (FORWARD head connected)

Pin No.	Symbol	Typical pin voltage		I/O	I/O resistance	Equivalent circuit	Description
		DC	AC				
33 38	PBREF2 PBREF1	4.0V	—	O	—		Playback equalizer amplifier reference ($V_{cc}/2$ output)
35	VCT	4.0V	—	O	—		Center ($V_{cc}/2$ output)
36	PBGND	0.0V	—	—	—		Playback equalizer amplifier ground (Connect to ground.)

Electrical Characteristics

(Ta = 25°C, Vcc = 8.0V, DVcc = 5.0V)

Item	Symbol	Measurement conditions	Min.	Typ.	Max.	Unit
Operating voltage	Vopr		7.8	8.0	11.0	V

Music Sensor						
Signal detection level 1	Vms1	TAPEIN 5kHz, MS ON, G1 mode, external constant of 39kΩ and 0.0047μF	-43.0	-40.0	-37.0	dBm
Signal detection level 2	Vms2	TAPEIN 5kHz, MS ON, G2 mode, external constant of 3.9kΩ and 0.47μF	-63.0	-60.0	-57.0	dBm
MS output leak current	Ioh	No signal, MS OFF, G1 mode	—	0.0	1.0	μA
MS output saturation voltage	Vol	TAPEIN 5kHz –30dBm, MS ON, G1 mode, 1mA applied to MSOUT pin	—	0.3	1.0	V
Logic Voltage						
Low level	Vil	Input voltage of NRMODE, NRSW, INSW, TAPESW, DRSW, MSMODE, MSSW	0.0	—	0.5	V
High level	ViH	Input voltage of NRMODE, NRSW, INSW, TAPESW, DRSW, MSMODE, MSSW	2.5	—	DVcc	V

*1 The crosstalk between TAPE and AUX is measured with a 5.1kΩ external resistor connected to AUXIN1 (Pin 5). In this condition, the crosstalk is approximately -67dB due to the signal leak from MSLPF (Pin 6).

In order to improve the crosstalk between TAPE and AUX, AUXIN1 pin should be driven with a low impedance.

Electrical Characteristics Measurement Circuit

Application Circuit 1

Application circuits shown are typical examples illustrating the operation of the devices. Sony cannot assume responsibility for any problems arising out of the use of these circuits or for any infringement of third party patent and other right due to same.

Application Circuit 2

Application circuits shown are typical examples illustrating the operation of the devices. Sony cannot assume responsibility for any problems arising out of the use of these circuits or for any infringement of third party patent and other right due to same.

Description of Operation

1. Signal route

Fig. 1. Signal route block diagram

AMP1 and AMP2 are operational amplifiers. AMP1 composes the playback equalizer amplifier by attaching an external resistor and capacitor to PBFB, PBEQ and PBOUT pins.

AMP2 is an input selector and a line amplifier. The gain is 24dB when NR is OFF.

The Dolby NR reference level is -6dBm (LINEOUT).

2. Adjustment method

Fig. 2-1. Level diagram (application circuit 1)

Fig. 2-2. Level diagram (application circuit 2)

Adjust the playback equalizer amplifier gain so that -6dBm (Dolby level) is output on LINEOUT (Pins 7 and 24) by playing back the reference tape for Dolby level adjustment.

Adjustment should be performed according to the rules of Dolby Laboratories Licensing Corporation because this IC has the built-in Dolby NR system.

List of Calibration Cassette Tape

Dolby level is defined as 200nWb/m measured according to the ANSI high efficiency head method.

The followings are the reference tapes specified by Dolby Laboratories Licensing Corporation.

1. A-bex Laboratories, Inc. (part no. TCC-130)
2. BASF (product code 09797 XE)
3. Kaneon Corp. (LC Engineering part no. LCT-7001)
4. Standard Tape Laboratory (catalogue no. 28)
5. TEAC Corporation, Japan (part no. MTT150)
6. TEAC Corporation of America (part no. MTT150)
7. Victor Company of Japan, Ltd. (part no. TMT-6130, VTT-727)
8. Sony Corporation (part no. TY-256)

3. Playback equalizer amplifier

Fig. 3. Playback equalizer amplifier block diagram

Fig. 4. Playback equalizer amplifier frequency response

The CXA2511AQ achieves the frequency response of Fig.4 with the circuit configuration shown in Fig. 3. Two systems (FORWARD and REVERSE) of playback head input are provided for each channel. The FORWARD input pin is selected when DRSW (Pin 19) is Low; REVERSE is selected when DRSW is High.

The playback equalizer amplifier frequency response can be set in two levels.

When TAPESW (Pin 18) is Low, SW2 shown in Fig. 3 is turned OFF; when TAPESW is High, SW2 is turned ON.

The external resistance R1 should be adjusted to adjust the playback equalizer amplifier gain.

The playback equalizer amplifier frequency response is all determined by the external resistance and capacitance, and it can be obtained with the following equation.

$$G(s) = \frac{R1 + R2}{R1} \cdot \frac{1 + \{s \cdot C1 \cdot (R1 \cdot R2 + R2 \cdot Rx + Rx \cdot R1) / (R1 + R2)\}}{1 + s \cdot C1 \cdot (R2 + Rx)} \quad (s = j\omega)$$

Where, Rx = R3 when TAPESW pin = Low;

Rx = R3//R4 when TAPESW pin = High

Using the above equation, G1 in Fig. 3 and low-frequency time constant (T1) and high-frequency time constants (T2 and T3) are as follows:

$$G1 = 20 \log \frac{R1 + R2}{R1}$$

$$T1 = C1 \cdot (R2 + Rx)$$

$$T2, T3 = \frac{C1 \cdot (R1 \cdot R2 + R2 \cdot Rx + Rx \cdot R1)}{R1 + R2}$$

4. Music sensor

Fig. 5. Music sensor block diagram

The signal input from TAPEIN is added and amplified by AMP1. This signal is then input to the LPF (R4 and C1). The LPF cut-off frequency can be adjusted by connecting the external capacitance to MSLPF pin. The cut-off frequency is approximately 23kHz when MSLPF pin is left open.

The detection level and HPF cut-off frequency are determined with the external resistance and capacitance connected to G1FB or G2FB at AMP2, and the signal is converted to a current.

The signal is full-wave rectified and is converted to a voltage by the internal resistance R5.

The full-wave rectified signal is smoothed. The internal resistance (R6) and external capacitance (C4) determine the smoothing response time. The recovery time is determined by the external resistance (R10) and capacitance (C4).

The AMP3 comparator detects whether the smoothed signal is greater or smaller than the comparator threshold.

The comparator has approximately 2dB hysteresis.

The table below shows the example of the constant and characteristics for the external resistance and capacitance connected to G1FB and G2FB.

	R	C	Signal detection level	Music signal interval detection level	Cut-off frequency
FF/REW (G1)	39kΩ	0.0047μF	-39.5dBm	-41.4dBm	870Hz
Playback (G2)	3.9kΩ	0.47μF	-59.5dBm	-61.4dBm	87Hz

Fig. 6. Music sensor circuit frequency response

5. Operating mode control method

The CXA2511AQ has a Dolby NR mode select switch (NRMODE), Dolby NR switch (NRSW), playback equalizer amplifier select switch (TAPESW), head input select switch (DRSW), music sensor mode select switch (MSMODE) and music sensor switch (MSSW).

The operating modes for each switch are shown in the following table.

Pin No.	Pin name	Pin voltage	
		Low (OPEN)	High
15	NRMODE	Dolby B type NR	Dolby C type NR
16	NRSW	Dolby NR OFF	Dolby NR ON
17	INSW	TAPE	AUX
18	TAPESW	120μs	70μs
19	DRSW	PBIN FORWARD	PBIN REVERSE
20	MSMODE	G1	G2
21	MSSW	MS ON	MS OFF

Notes on Operation

1. Dolby NR

Dolby NR functions by using the current that flows into DIREF (Pin 25) as standard.

The Dolby NR attack/recovery time is determined by the capacitance connected to TCH (Pins 8 and 23) and TCL (Pins 9 and 22).

Use the parts connected to these pins with high accuracy and small temperature characteristics.

(It is recommended that the resistance tolerance of 2% <metal-oxide> and capacitance tolerance of 10% <film>.)

2. Playback equalizer amplifier

All playback equalizer amplifier characteristics are determined by the external constants. Use the parts which satisfies the accuracy required for the playback equalizer amplifier.

3. Music sensor

The current on DIREF (Pin 25), and the resistance and capacitance connected to G2FB (Pin 10) and G1FB (Pin 11) determine the detection level and the HPF cut-off frequency.

The response time is determined by the resistance and capacitance connected to MSTC (Pin 12).

Use the parts which satisfies the accuracy required for the music sensor.
