APPLICATION

Bidirectional bus driver/receiver for various types of microcomputer systems.

FUNCTION

The M5L8216P is a non-inverting and the M5L8226P is an inverting 4-bit bidirectional bus driver.

When the terminal $\overline{CS}$ is high-level, all outputs are in high-impedance state, and when low-level, the direction of the bidirectional bus can be controlled by the terminal $\overline{DIEN}$.

The terminal $\overline{DIEN}$ controls the data flow. The data flow control is performed by placing one of a pair of buffers in high-impedance state and allowing the other to transfer the data.

PRECAUTIONS FOR USE

When the M5L8216P data input or two-way data bus is set to high to disable-output from the two-way bus or data output, care is required as a low glitch of approximate width 10ns will be generated.
