- Material** High Saturation Nickel/Iron Core.
- Inductance** Tested at an AC drive level which does not affect the initial permeability of the core, the DC drive level was 0 amps.
- Incremental Current** The DC current which reduces the inductance value to the percentage drop tabulated.
- Inductor Base** Formed from a high temperature thermoplastic capable of withstanding approx. 600°F for short periods of time.
- Marking** API, Inductance, and Date Code.
