General description

The AM256R2D incorporates two AM256 dice in one chip.

With two totally separate sensors enclosed within the same chip this dual sensor can offer redundant functionality. Each sensor is totally isolated from the other and can be supplied with a separate power supply.

Each sensor can output absolute SSI or incremental position information. Position error between the two sensors is always better than ± 1 bit.

For detailed sensor information, please refer to the AM256 datasheet that can be found on www.rls.si.
