

THC63LVDM83R/THC63LVDM63R

REDUCED SWING LVDS 24Bit/18Bit COLOR HOST-LCD PANEL INTERFACE

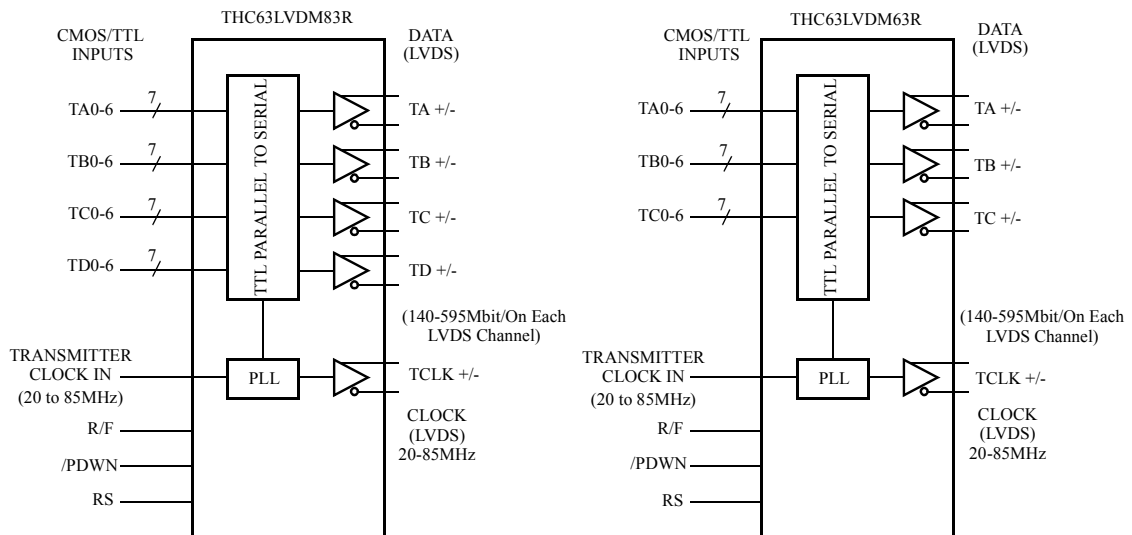

General Description

The THC63LVDM83R transmitter converts 28bits of CMOS/TTL data into LVDS (Low Voltage Differential Signaling) data stream. A phase-locked transmit clock is transmitted in parallel with the data streams over a fifth LVDS link. At a transmit clock frequency of 85MHz, 28bits of RGB data and 4bits of LCD timing and control data (HSYNC, VSYNC, CNTL1, CNTL2) are transmitted at a rate of 595Mbps per LVDS channel. Also available is THC63LVDM63R that converts 21bits of CMOS/TTL data into LVDS(Low Voltage Differential Signaling) data stream. Both transmitters can be programmed reduced swing LVDS through a dedicated pin for low power consumption and EMI.

Features

- 28:4 Data channel compression at up to 298 Megabytes per sec throughput
- Wide dot clock range: 20-85MHz suited for VGA, SVGA, XGA and SXGA
- Narrow bus (10 lines or 8 lines) reduces cable size
- Support Reduced swing LVDS for Low EMI
- 200mV swing LVDS/350mV swing LVDS selectable
- Support Spread Spectrum Clock Generator
- On chip Input Jitter Filtering
- PLL requires No external components
- Single 3.3V supply with 125mW(TYP)
- Power-Down Mode
- Low profile 56 or 48 Lead TSSOP Package
- Clock Edge Programmable
- Improved Replacement for the National DS90C383 or DS90C363

Notes to Users:

1. The contents of this data sheet are subject to change without prior notice.
2. Circuit diagrams shown in this data sheet are examples of application. Therefore, please pay sufficient attention when designing circuits. Even if there are incorrect descriptions, we are not responsible for any problem due to them. Please note that incorrect descriptions sometimes cannot be corrected immediately if found.
3. Our copyright and know-how are included in this data sheet. Duplication of the data sheet and disclosure to other persons are strictly prohibited without our permission.
4. We are not responsible for any problems of industrial proprietorship occurring during THC63LVDM83R/THC63LVDM63R use, except for those directly related to THC63LVDM83R/THC63LVDM63R's structure, manufacture or functions. THC63LVDM83R/THC63LVDM63R is designed on the premise that it should be used for ordinary electronic devices. Therefore, it shall not be used for applications that require extremely high-reliability (space equipment, nuclear control equipment, medical equipment that affects people's lives, etc.). In addition, when using THC63LVDM83R/THC63LVDM63R for traffic signals, safety devices and control/safety units in transportation equipment, etc., appropriate measures should be taken.
5. We are making the utmost effort to improve the quality and reliability of our products. However, there is a very slight possibility of failure in semiconductor devices. To avoid damage to social or official organizations, much care should be taken to provide sufficient redundancy and fail-safe design.
6. No radiation-hardened design is incorporated in THC63LVDM83R/THC63LVDM63R.
7. Judgment on whether THC63LVDM83R/THC63LVDM63R comes under strategic products prescribed by the Foreign Exchange and Foreign Trade Control Law is the user's responsibility.
8. This technical document was provisionally created during development of THC63LVDM83R/THC63LVDM63R, so there is a possibility of differences between it and the product's final specifications. When designing circuits using THC63LVDM83R/THC63LVDM63R, be sure to refer to the final technical documents.
