-100mA / -50V Digital transistors (with built-in resistors)

DTA143TM / DTA143TE / DTA143TUA DTA143TKA / DTA143TSA

●Applications

Inverter, Interface, Driver

●Features

1) Built-in bias resistors enable the configuration of an inverter circuit without connecting external input resistors (see equivalent circuit).
2) The bias resistors consist of thin-film resistors with complete isolation to allow positive biasing of the input. They also have the advantage of almost completely eliminating parasitic effects.
3) Only the on/off conditions need to be set for operation, making the device design easy.
