Complete Family of Wireless Solutions

Silicon Labs offers a broad portfolio of low-power wireless solutions – from single-chip sub-GHz ISM band receivers, transmitters, transceivers and wireless MCUs designed to support a wide range of wireless applications to high-performance 2.4 GHz ZigBee solutions for mesh networking applications.

Robust Tools, Software and Support

Complete tools help you throughout the entire development cycle, including in-depth documentation, development hardware, and robust software platforms to help you easily set up, configure and monitor your system.

Perfect for Your Application

Optimized for power efficiency, the high-performance, low-power, mixed-signal wireless family reduces system cost, improves reliability and enables new features for a variety of end equipment solutions.

FALL 2012

Smart solutions for metering, home automation, industrial, consumer and medical applications

Sub-GHz EZRadio Development Support

Silicon Labs offers complete tools to help designers throughout the entire project. The EZRadio®, EZRadioPRO® and wireless solutions offer hardware and software platforms to easily set up and configure, compile and debug a project. Full documentation and a broad range of third-party compilers and development tools are available. Software stacks provide networking support for multi-node metering networks. Software simulation tools can estimate power consumption and determine expected battery life.

Complete development/prototyping system includes the following:

- Prototyping/demonstration board
- USB adapter for in-system programming and debugging
- Silicon Laboratories IDE
- MCU configuration wizard

EZMac® Embedded Media Access Control Software Demo Code

EZMac® media access control software is developed in C code for use with our ISM transceiver products and Wireless MCUs to help create simple point-to-point and star netwroks. Transceiver application designers can use the EZMac software as a demonstration of a simplified interface to the physical radio layer that manages the delivery of signals and their associated packets from the transmitter to the receiver, between nodes. **www.silabs.com/EZMac**

Wireless Development Suite

The Wireless Development Suite (WDS) provides developers a comprehensive toolset to quickly and easily create and deploy efficient, robust and low-cost wireless applications. WDS can be used for demonstrating part capabilities, testing performance, and prototyping application examples, with little or no RF design and measurement experience. **www.silabs.com/WDS**

Requirement :: Development Support

- Supports ISM band transceivers
- Internal baud rate generator
- 16 byte payload per packet
- Dedicated crystal oscillator for exact timing
- DQD (data quality detector) for FSK fast frequency hopping
- Configurable packet filtering
- Multiple error detection

Requirement :: Prototyping and Test

- Supports a family of TX, RX and TRX test cards
- Device config, save, and restore
- Custom scripting API
- Online device documentation
- Terminal window
- PC interface to evaluation boards

Unified Development Platform

Silicon Labs offers an innovative approach in hardware support with the Unified Development Platform (UDP), featuring a unified mother board, modular boards, integrated LCD and ample real estate for prototyping, expansion and integration. The UDP provides a standalone demonstration and software development platform for the EZRadioPRO Wireless devices, Wireless MCU devices and MCU products. Kits include UDP base boards and RF test cards. Additional test cards may be ordered if the included 915 MHz or 868 MHz test cards don't satisfy the requirements for the end application. www.silabs.com/UDP

The UDP platform supports all of the following:

- MCU code and firmware development (IDE, configuration wizard, example codes, etc.)

- RF design and optimization (Wireless Development Suite support, automatic board detection and firmware download, sample RF code, run-time PHY interface, etc.)

- Networks and protocol stacks (such as the wireless M-Bus stack)
ZigBee Development Tools

The EM35x development environment dramatically shortens design cycles by joining sophisticated network development and debugging tools. It begins with the silicon-based packet trace port, a collection of minimally-intrusive hardware debugging features on the EM35x system-on-chip (SoC) and network co-processor (NCP). Debug adapters bridge the packet trace port to the developer's PCs via an Ethernet connection, where the Desktop Network Analyzer enables rapid development and debugging. The Ember AppBuilder is an easy-to-use graphical tool providing the fastest path to certifiable products using ZigBee standard public application profiles. Bundles of these tools and development boards are available for each of the Ember ZigBee chipsets. www.silabs.com/zigbee-devkits
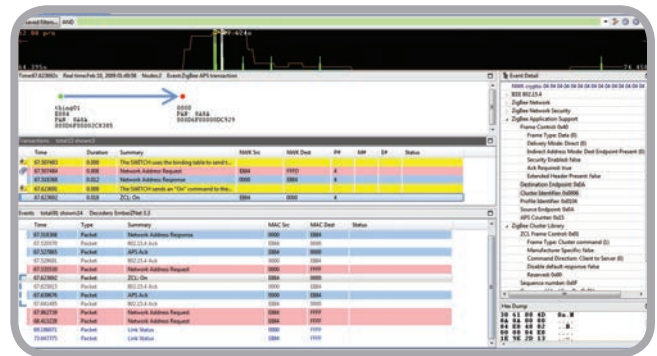

EM35x Series Development Kit

(EM35X-DEV or EM35X-DEV-IAR)

Customers starting new ZigBee SoC projects should choose the EM35x Development Kit as their starting point. There are two variants:

- EM35X-DEV with a 30-day trial license of IAR Embedded Workbench for ARM
- EM35X-DEV-IAR includes a full standalone Cortex-M3 licence for IAR Embedded Workbench for ARM

An IAR EWARM license (P/N: EM35X-DEV-UPG-IAR) for use with the EM35x development kit may be purchased separately

EM35x Family as a Network Co-Processor (NCP)

(EM35X-NCP-ADD-ON-S)

Silicon Labs' Ember EM35x NCP add-on kit allows designers to take maximum advantage of the superior power consumption, radio performance and CPU performance of the Ember EM35x series chips in a network co-processor configuration.

Buy or Sample Wireless Products

QUICKLY BUY OR SAMPLE PRODUCTS ON OUR WEBSITE AT www.silabs.com/buy

Wireless Chip Selector: www.silabs.com/wirelesschipselector

The Silicon Labs' wireless product selector online utility helps identify the right wireless product for the application. Simply make the selections that best describe the design, and the appropriate product with all supporting documentation, development software and hardware will be displayed. Enter the design specifications below and in less than a minute we'll match you to the right wireless product for the project. You will receive product match(es), data sheet(s), application notes, development hardware and software.

Cross-Reference Utility: www.silabs.com/cross-reference

Silicon Labs' cross reference utility allows you to type in a competitor's part number (full or partial) and if we have a cross-match, our part number pops up. Results are automatically filtered as you type and can be exported to excel so you can e-mail or save results.

**Silicon Labs' products are designed and manufactured
to ISO 9001, ISO 14001 and ISO/TS 16949 standards.**
