

## Infrared Receiver Module

0-05-03-15 Preliminary

Module No.: PIC-2218TMB-THA

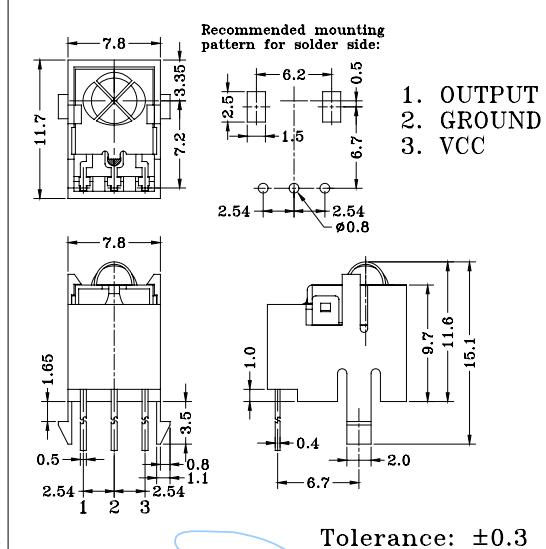

### 1. Features:

- Miniature size
- Built-in exclusive IC
- Wide half angle & long reception distance
- Good noise-proof capability
- High immunity against ambient light
- High protection ability to EMI
- Back Metal Cover
- Top view and Mesh
- Case Holder
- Low voltage operating: 2.7V

### 2. Applications

- AV instruments (Audio, TV, VCR, CD player)
- Home appliances (Air-conditioner, Fan, Light.)
- Remote control for wireless devices

### Dimensions

Tolerance:  $\pm 0.3$

### 3. Absolute Maximum Ratings

| Parameter                | Symbol | Ratings   | Unit |
|--------------------------|--------|-----------|------|
| Supply Voltage           | Vcc    | 6.0       | V    |
| Operating Temperature    | Topr   | -10 ~ +60 | °C   |
| Storage Temperature      | Tstg   | -20 ~ +75 | °C   |
| Soldering Temperature *1 | Tsol   | 240       | °C   |

\*1 At the position of 2mm from the bottom of the package within 5 seconds.

### 4. Electro-optical Characteristics

(Ta=25°C)

| Parameter                 | Symbol | Conditions         | Min.               | Typ.    | Max.               | Unit |
|---------------------------|--------|--------------------|--------------------|---------|--------------------|------|
| Supply voltage            | Vcc    |                    | 2.7                | 3.0     | 5.5                | V    |
| Current Consumption       | Icc    | Input Signal = 0   |                    | 1.0     | 1.5                | mA   |
| Reception Distance        | d      | 200±5Lux           | Vcc=3V<br>Vcc=2.7V | 10<br>7 | 16<br>10           | m    |
| Half Angle                | Δθ     |                    |                    |         | ±45                | deg  |
| B.P.F. Center Frequency   | Fo     |                    |                    |         | 37.9               | kHz  |
| Peak Wavelength           | λp     |                    |                    |         | 940                | nm   |
| Signal Output             | So     |                    |                    |         | --- Active Low --- |      |
| High Level Output Voltage | Voh    |                    | Vcc-0.5            |         |                    | V    |
| Low Level Output Voltage  | Vol    |                    |                    | 0.2     | 0.4                | V    |
| High Level Pulse Width    | Twh    | Burst Wave = 600μs | 500                | 600     | 700                | μs   |
| Low Level Pulse Width     | Twl    |                    | 500                | 600     | 700                | μs   |

### 5. Reliability Test Items

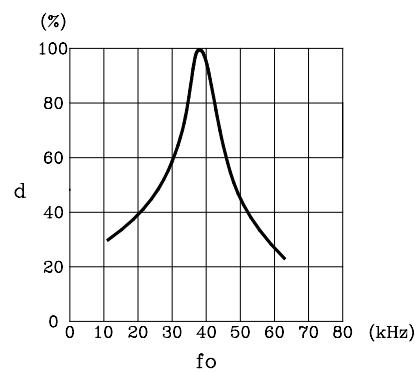

(Ta=25°C)

| Test Items                          | Test Conditions               | Ratings   |
|-------------------------------------|-------------------------------|-----------|
| High Temperature Storage            | Ta=60°C, Vcc=3.0V             | t=240hr.  |
| Low Temperature Storage             | Ta=-10°C, Vcc=3.0V            | t=240hr.  |
| High Temperature High Humid Storage | Ta=40°C, 90% RH, Vcc=3.0V     | t=240hr.  |
| Temperature Cycling                 | -20°C (30min) ~ +70°C (30min) | 20 cycles |
| Soldering Heat                      | 240±5°C                       | 5 sec.    |

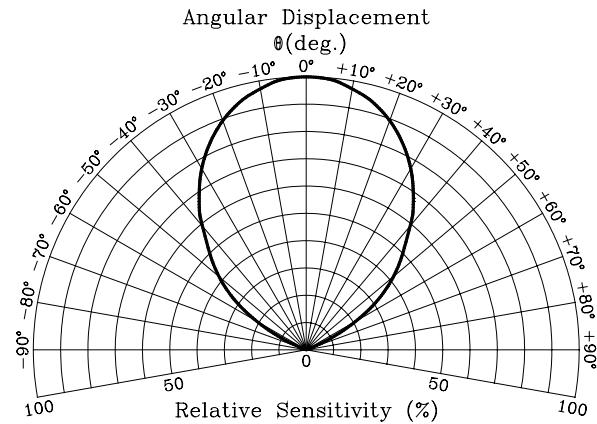

## Infrared Receiver Module

Module No.: PIC-2218TMB-THA

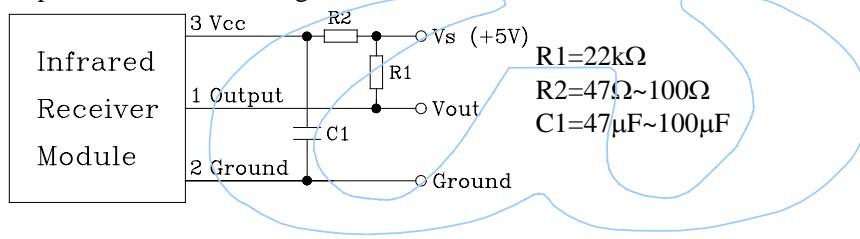

Relative Reception Distance vs  
Transmitter Carrier Frequency

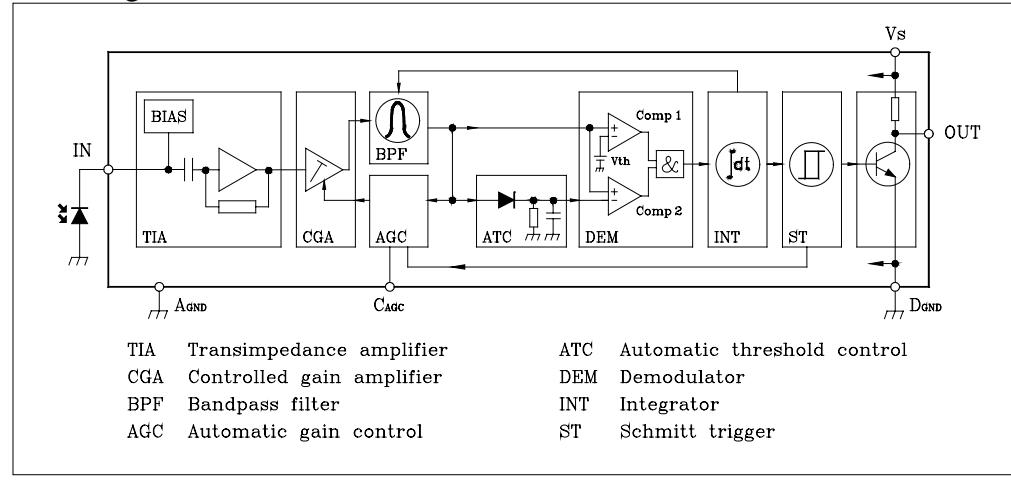

Sensitivity Diagram

In case of noisy power supply, please serially insert  $100\Omega$  resistor and about  $47\mu F$  electrolytic capacitor in Vcc line and ground as follows:-

## Block Diagram

## Standard Inspection

Among electrical characteristics, total quantity will be inspected as below:-

- Distance between emitter and detector
- Current consumption
- H level output voltage
- L level output voltage

## Infrared Receiver Module

Module No.: PIC-2218TMB-THA

### Testing Method

Distance between emitter and detector specifies maximum distance that output waveform satisfies the standard (FIG-3) under the conditions below against the standard transmitter.

#### a. Measuring place

Indoor without extreme reflection of light.

#### b. Ambient light source

Detecting surface illumination is  $200 \pm 5$  Lux under ordinary white fluorescence lamp of no high frequency lightning.

#### c. Standard transmitter

Transmitter wave indicated in FIG-2 of standard transmitter is arranged to satisfy  $V_o \geq 50$  mVp-p under the measuring circuit specified in FIG-3

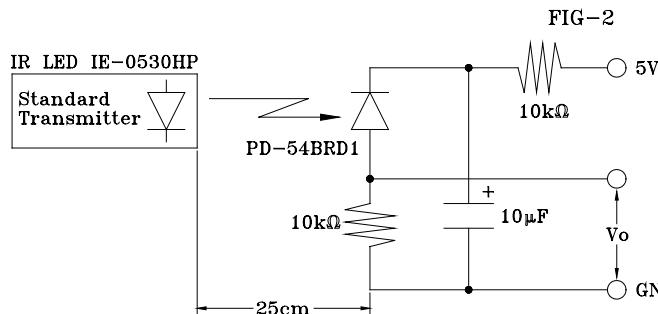

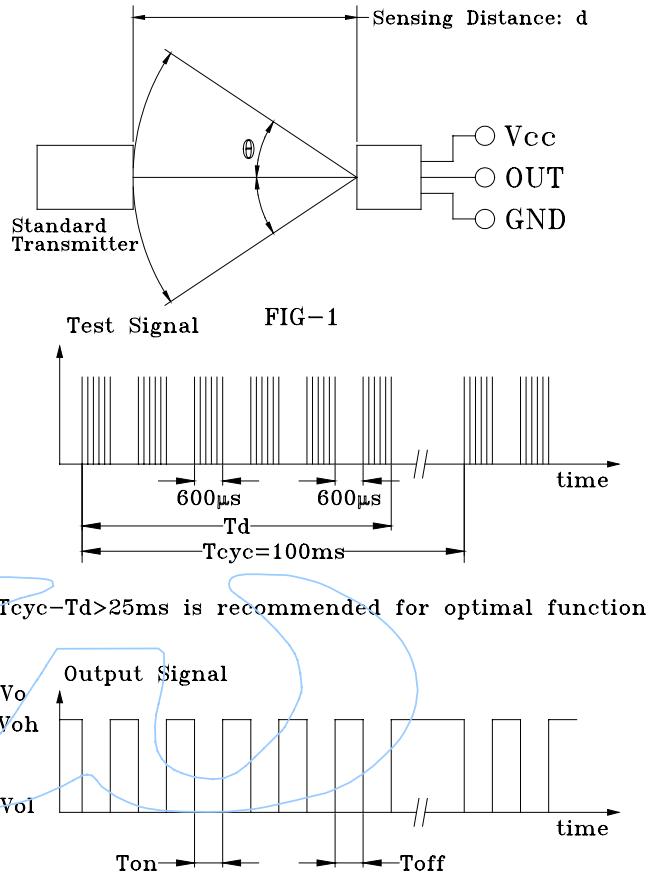

FIG-3 Power Output Measurement Circuit

### Precautions for Use

- Store and use where there is no force causing transformation or change in quality.
- Store and use where there is no corrosive gas or sea (salt) breeze.
- Store and use where there is no extreme humidity.
- Solder the lead pin within the condition of ratings. After soldering, do not add exterior force.
- Do not wash this device. Wipe the stains of diode side with a soft cloth. You can use the solvent, ethyl alcohol, or methyl alcohol only.
- To prevent static electricity damage to the pre-amp, make sure that the human body, the soldering iron are connected to ground before using.
