## PIN Diode Driver for Series / Shunt High Power Switches

## Features

- High Drive Current Capability (Up to 50 mA )
- Up to 32V Back Bias in Off State
- Single CMOS Logic Input
- Fast Switching
- Low Current Consumption
- Land Grid Array Package for SMT Applications
- $260^{\circ} \mathrm{C}$ Reflow Compatible
- RoHS* Compliant
- Tape and Reel Packaging Available

## Description

M/A-COM's MADR-008851-000100 Switch Driver is designed to work with M/A-COM's line of series / shunt SPDT HMIC switches which operate in the power range of approximately 5 to 20 W CW . It is capable to provide forward bias currents up to 50 mA for each diode in the series/shunt switch, with back bias voltage configurable from 12 V to 32 V . It is packaged in a Land Grid Array surface mount package and is available in tape and reel packaging for high volume applications.

Sample boards are available with M/A-COM 20W switch MASW-000834-13560T.

Ordering Information ${ }^{1}$

| Part Number | Package |
| :---: | :---: |
| MADR-008851-000100 | Bulk Packaging |
| MADR-008851-0001TR | 300 piece Reel |
| MADR-008851-0001TB |  <br> MASW-000834-13560T Switch |

1. Reference Application Note M513 for reel size information.

* Restrictions on Hazardous Substances, European Union Directive

## Pin Configuration

| Pin No. | Pin Name | Pin No. | Pin Name |
| :---: | :---: | :---: | :---: |
| 1 | VCC | 13 | GND |
| 2 | GND | 14 | SH2 |
| 3 | C1 (Logic) | 15 | GND |
| 4 | GND | 16 | RX Drive |
| 5 | VDD | 17 | GND |
| 6 | GND | 18 | GND |
| 7 | GND | 19 | GND |
| 8 | GND | 20 | GND |
| 9 | GND | 21 | GND |
| 10 | TX Drive | 22 | GND |
| 11 | GND | 23 | GND |
| 12 | SH1 | - | - |

## Handling Procedures

Please observe the following precautions to avoid damage:

## Static Sensitivity

Silicon Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

## Moisture Sensitivity

The MSL rating for this part is defined as Level 3 per IPC/JEDEC J-STD-020. Parts shall be stored and/or baked as required for MSL Level 3 parts.

## PIN Diode Driver for Series / Shunt High Power Switches

## Recommended Operating Conditions

| Parameter | Test Conditions | Unit | Min | Typ |
| :--- | :--- | :---: | :---: | :---: | :---: |
| VCC | Nominal VCC $=3.3 \mathrm{~V}$ |  |  |  |
| Nominal VCC $=5.0 \mathrm{~V}$ |  |  |  |  |$)$

2. TX and RX currents are user selectable. Reference "Driver and SPDT Schematic" for suggested values.
3. A resistor needs to be connected between SH 1 and SH 2 to set the shunt diode bias current. Reference "Driver and SPDT Schematic" for suggested values.

## Absolute Maximum Ratings ${ }^{4,5}$

| Parameter | Absolute Maximum |
| :---: | :---: |
| VCC (+5V) | -0.5 V to +6.5 V |
| VDD (+28V) | -0.5 V to 40 V |
| C1 (Logic) | -0.5 V to 6.5 V |
| RX Sinking Current | 60 mA |
| TX Sinking Current | 60 mA |
| Power Dissipation in Still Air | 100 mW |
| Operational Temperature | -40 to $+85^{\circ} \mathrm{C}$ |
| Storage Temperature | -55 to $+125^{\circ} \mathrm{C}$ |

4. Exceeding any one or combination of these limits may cause permanent damage to this device.
5. M/A-COM does not recommend sustained operation near these survivability limits.

## Truth Table

| Control <br> Input | Condition of Driver |  | Condition of <br> Switch |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| C1 | TX <br> Voltage | RX <br> Voltage | SH <br> Current | TX | RX |
| 0 | High | Low | Low | Off | On |
| 1 | Low | High | High | On | Off |

## Driver and SPDT Schematic for 2 GHz Applciations ${ }^{8,9,10,11,12,13,14}$

8. Forward Bias Diode Voltage: $\Delta \mathrm{Vf}$ is $\sim 0.9 \mathrm{~V} @ 22 \mathrm{~mA} ; \Delta \mathrm{Vf}$ is $\sim 1.0 \mathrm{~V} @ 35 \mathrm{~mA}$
9. R 1 is calculated by $(\mathrm{VCC}-\Delta \mathrm{Vf}) / \mathrm{I}_{\text {series }}-22 \Omega$, where $\mathrm{I}_{\text {series }}$ is the desired forward bias current for the series diodes. For 20 mA load current, R1 $=178 \Omega @$ VCC $=5.0 \mathrm{~V}$ and $93 \Omega @ \mathrm{VCC}=3.3 \mathrm{~V}$. For 50 mA load current, R1 $=57.6 \Omega @ \mathrm{VCC}=5.0 \mathrm{~V}$ and $24 \Omega @ \mathrm{VCC}=$ 3.3V.
10. $R 2$ is calculated by (VDD $-\Delta \mathrm{Vf}$ ) / $I_{\text {shunt }}$, where $I_{\text {shunt }}$ is the desired forward bias current for the shunt diode. The power rating is calculated by $I_{\text {shunt }} \times(V D D-\Delta V f)$. For $28 V$ VDD and 20 mA of $\mathrm{I}_{\text {shunt }}, \mathrm{R} 2$ should use a $1 \mathrm{~W}, 1.3 \mathrm{k}$ ohm resistor.
11. C 8 is already built-in for M/A-COM MASW-000834-13560T switch.
12. The current through the back-biased diodes will be the leakage current for the diodes
13. C1-C7, L1-L4, R1, R2, and the switch are discrete components that should be installed on the user's board. It is recommended that Coilcraft 0603CS-27NXJLW or equivalent be used for L1-L4 at 2 GHz . For other frequency band, C1-C3 and L1-L4 should be adjusted.
14. The switching speed will be affected by the value of VCC, VDD, C6, C7, the size of the PIN diodes, and the forward bias currents. Use higher VCC and VDD, and lower forward bias currents for faster switching.
