

Voltage Detector, High-Precision

Description

The EM6352 is an ultra-low current voltage detector available in a large variety of configurations and very small packages for maximum flexibility in all end-applications up to 125°C and using power supplies between 1.5V and 5.5V.

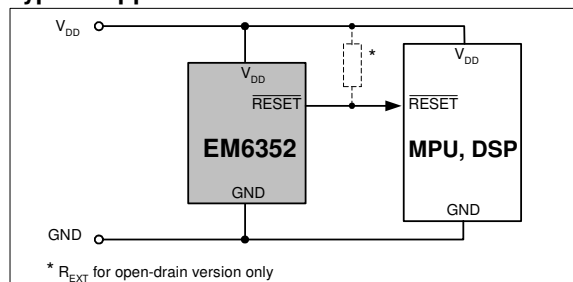

This circuit monitors the supply voltage of any electronic system, and generates the appropriate reset signal without a delay time. The threshold defines the minimum allowed voltage which guarantees the good functionality of the system. As long as V_{DD} stays above the threshold voltage, the output stays inactive. If V_{DD} drops below V_{TH} , the output goes active. The output is guaranteed to be in the correct state for V_{DD} down to 0.8V. There are 12 reset threshold voltages starting as low as 1.31V and up to 4.63V. The EM6352 features three output types: active-low push-pull, active-low open-drain and active-high push-pull.

Small SC70 and SOT23 packages as well as ultra-low supply current of 2.7µA make the EM6352 an ideal choice for portable and battery-operated devices.

Absolute Maximum Ratings

Parameter	Symbol	Conditions
Voltage at V_{DD} to GND	V_{DD}	-0.3V to +6V
Minimum voltage at any signal pin	V_{MIN}	GND - 0.3V
Maximum voltage at any signal pin	V_{MAX}	$V_{DD} + 0.3V$
Electrostatic discharge max. to MIL-STD-883C method 3015.7 with ref. to V_{SS}	V_{ESD}	2000V

Handling Procedures

This device has built-in protection against high static voltages or electric fields; however, anti-static precautions must be taken as for any other CMOS component. Unless otherwise specified, proper operation can only occur when all terminal voltages are kept within the voltage range. Unused inputs must always be tied to a defined logic voltage level.

$$\Delta V_{TH}(T = T_A) = \frac{\Delta V_{TH}}{\Delta T_A} \times V_{TH} \times |T_A - 25^\circ C|$$

Example:

for version $V_{TH}=2.93V$, variation at $T_A=70^\circ C$ is equal to $\Delta V_{TH}(70^\circ C)=\pm 50 \cdot 10^{-6} \times 2.93 \times (70-25)=\pm 6.59mV$

Traceability for small packages

Due to the limited space on the package surface, the bottom marking contains a limited number of characters that provide only partial information for lot traceability. Full information for complete traceability is however provided on the packing labels of the product at delivery from EM. It is highly recommended that the customer insures full lot traceability of EM product in his final product.
