Characteristics

Remark:

Reference level for the relative attenuation a_{rel} of the **TFS 326A** is the minimum of the pass band attenuation a_{min} . The minimum of the pass band attenuation a_{min} is defined as the insertion loss a_e . The centre frequency f_c is the arithmetic mean value of the upper and lower frequencies at the **3 dB** filter attenuation level relative to the insertion loss a_e . The nominal frequency f_N is fixed on **326,4** MHz without tolerance.
