

## SGM2008

# Low Power, Low Dropout, 300mA, RF - Linear Regulators

### GENERAL DESCRIPTION

The SGM2008/A series low-power, low-noise, low-dropout, CMOS linear voltage regulators operate from a 2.5V to 5.5V input and deliver up to 300mA. They are the perfect choice for low voltage, low power applications. An ultra low ground current (200 $\mu$ A at 300mA output) makes these part attractive for battery operated power systems. The SGM2008/A series also offer ultra low dropout voltage (300mV at 300mA output) to prolong battery life in portable electronics. Systems requiring a quiet voltage source, such as RF applications, will benefit from the SGM2008/A series' ultra low output noise (30 $\mu$ VRMS) and high PSRR. An external noise bypass capacitor connected to the device's BP pin can further reduce the noise level.

The output voltage is preset to voltages in the range of 1.5V to 3.6V. Other features include a 10nA high logic-controlled shutdown mode, foldback current limit and thermal shut-down protection.

Devices come in 5-pin SOT23 package.

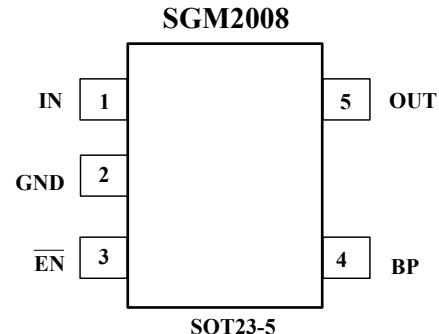

### FEATURES

- Low Output Noise: 30 $\mu$ VRMS typ(10Hz to 100KHz)
- Ultra-Low Dropout Voltage:  
300mV at 300mA output
- Low 77 $\mu$ A No-Load Supply Current
- Low 200 $\mu$ A Operating Supply Current  
at 300mA Output
- High PSRR (73dB at 1KHz)
- Thermal-Overload Protection
- Output Current Limit
- 10nA high Logic-Controlled Shutdown
- Available in Multiple Output Voltage Versions  
Fixed Outputs of 1.8V, 2.5V, 2.7V, 2.8V, 2.85V,  
2.9V, 3.0V, 3.3V and 3.6V

### APPLICATIONS

Cellular Telephones  
Cordless Telephones  
PHS Telephones  
PCMCIA Cards  
Modems  
MP3 Player  
Hand-Held Instruments  
Palmtop Computers  
Electronic Planners  
Portable/Battery-Powered Equipment

 Junction Temperature..... +150°C  
 Storage Temperature..... - 65°C to +150°C  
 Lead Temperature (soldering, 10s)..... 260°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Specifications subject to change without notice.

**Note 1:**  $V_{IN} = V_{OUT(NOMINAL)} + 0.5V$  or  $2.5V$ , whichever is greater.

**Note 2:** The dropout voltage is defined as  $V_{IN} - V_{OUT}$ , when  $V_{OUT}$  is  $100mV$  below the value of  $V_{OUT}$  for  $V_{IN} = V_{OUT} + 0.5V$ . (Only applicable for  $V_{OUT} = +2.5V$  to  $+5.0V$ .)

**Note 3:** Time needed for  $V_{OUT}$  to reach 95% of final value.

## TYPICAL OPERATION CIRCUIT

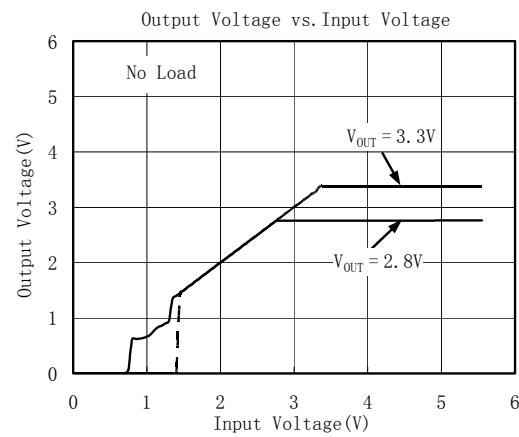

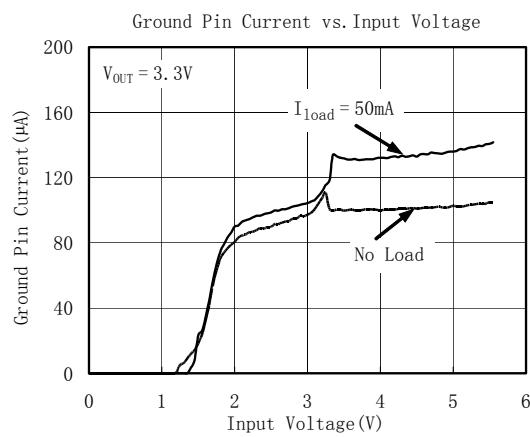

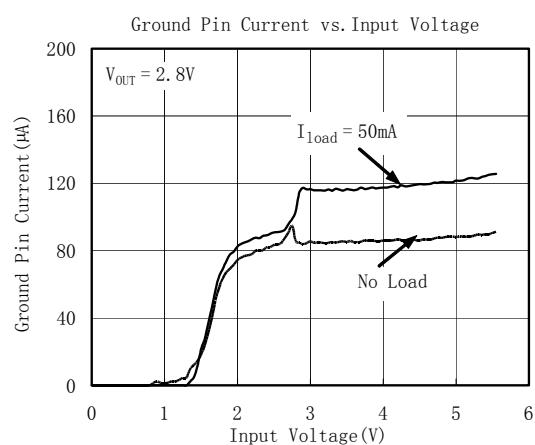

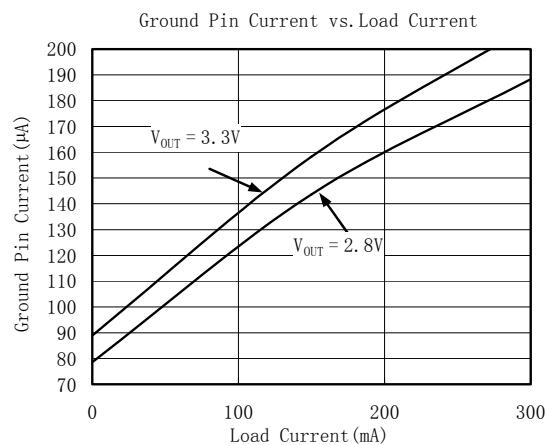

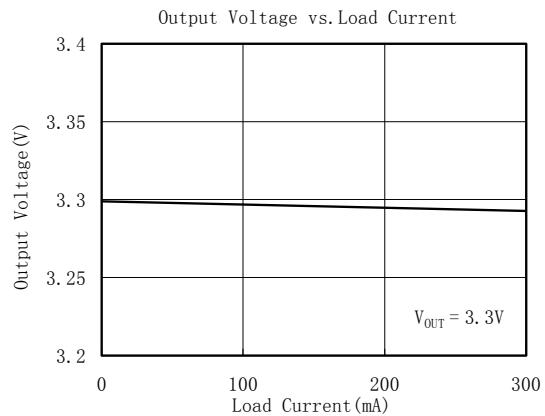

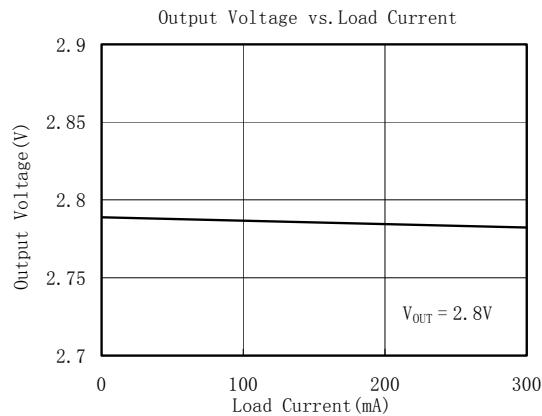

## PIN DESCRIPTION

PIN	NAME	FUNCTION
1	IN	Regulator Input. Supply voltage can range from 2.5V to 5.5V. Bypass with a 1 $\mu$ F capacitor to GND.
2	GND	Ground.
3	$\overline{EN}$	Shutdown Input. A high reduces the supply current to 10nA. Connect to GND for normal operation.
4	BP	Reference-Noise Bypass. Bypass with a low-leakage 0.01 $\mu$ F ceramic capacitor for reduced noise at the output.
5	OUT	Regulator Output.

## Application Notes

When LDO is used in handheld products, Attention must be paid to voltage spike which would damage SGM2008. In such applications, voltage spike will be generated at charger interface and V<sub>BUS</sub> pin of USB interface when charger adapters and USB equipments are hot-inserted. Besides this, handheld products will be tested on the production line on the condition of no battery. Test Engineer will apply power from the connector pin which connects with positive pole of the battery. When external power supply is turned on suddenly, the voltage spike will be generated at the battery connector. The voltage spike will be very high, it always exceeds the absolute maximum input voltage (6.0V) of LDO. In order to get robust design. Design Engineer needs to clear up this voltage spike. Zener diode is a cheap and effective solution to eliminate such voltage spike. For example, BZM55B5V6 is a 5.6V small package Zener diode which can be used to remove voltage spike in cell phone design. The schematic is shown in below:
