## Functional Description

The CY2303 is a 3 output 3.3 V phase-aligned system clock designed to distribute high-speed clocks in PC, workstation, datacom, telecom, and other high-performance applications.
The part allows user to obtain $1 \mathrm{x}, 2 \mathrm{x}$, and 4 x Ref output frequencies on respective output pins.
The CY2303 has an on-chip PLL, which locks to an input clock presented on the REFIN pin. The PLL feedback is internally connected to the REF output. The input-to-output skew is guaranteed to be less than $\pm 200 \mathrm{ps}$, and output-to-output skew is guaranteed to be less than 200 ps.
Multiple CY2303 devices can accept the same input clock and distribute it in a system. In this case, the skew between the outputs of two devices is guaranteed to be less than 400 ps .
The CY2303 is available in commercial and industrial temperature ranges.
